Foreword by the Minister

As government strives to achieve universal access to basic services for all households by 2014, understanding our current status in the delivery of basic services is critical both in terms of reporting accurately to the nation and in developing appropriate strategies and interventions. The diverse nature of our municipalities, notably their financial and human capacity, requires a differentiated and targeted set of interventions and strategies to reduce service delivery backlogs and to cope with the demand for new services. At the same time, municipalities must be able to maintain existing services and infrastructure.

Ideally, our reporting systems should be seamless across the three spheres of government, and horizontally across sector departments. Unfortunately, in the absence of this ideal, and the fact that the census is ten years apart, our planning agencies and government have to rely on other measures. The processes and consultations that have culminated in this publication are one such measure to assist decision-makers and planners with a platform for consistent reporting on basic services in a consultative manner.

I have no doubt that this publication will grow annually both in its acceptance by key stakeholders and the content that it will publish.

It is also my understanding that this reference document will give us the confidence to collate the information from different sources with greater understanding and to also work from the same page when reporting on the status and progress with regard to service delivery in our country.

This publication should take government's efforts to deliver a better quality of life for all South Africans a number of steps forward.

This publication embodies the ethos of the new Department of Cooperative Governance and Traditional Affairs to achieve a coherent, cohesive and integrated government for improved service delivery. The publication will go some way to improving the credibility of baseline information and will make an important contribution in determining what resources are required to facilitate service delivery. In its current form, the publication focuses on basic services initially and will be extended over time to include other sectors not currently covered as well other information sources deemed necessary by other institutions and the COGTA.

A handwritten signature in black ink, consisting of several overlapping loops and lines, positioned above the name of the Minister.

Minister for Cooperative Governance and Traditional Affairs

Acknowledgement

The Department of Cooperative Governance and Traditional Affairs would also like to express its gratitude to the following organisations:

- Statistics SA for their guidance and support with the data analysis;
- Municipalities;
- Department of Water and Environmental Affairs (DWEA);
- Department of Energy (DE);
- Department of Sport and Recreation South Africa (SRSA);
- National Treasury (NT);
- South Africa Local Government Association (SALGA);
- Department of Human Settlements (DHS); and
- Participating members of the Data Quality Improvement Programme.

EXECUTIVE SUMMARY

This publication does not replace or underscore the need for official and national statistics on basic services published by the Statistics South Africa. The information on basic services is presented for each of the 231 local municipalities and the 6 metropolitan municipalities. The information is presented at a national, provincial and municipal perspective.

The main purpose of this publication is to get a sense of the various information sources, and an appreciation of the differences in its methodology. This will provide a basis for robust debate and further work on streamlining processes to measure more consistently the status and progress with regard to basic services, as we gear to achieve universal access by 2014. It will also serve as a reference for planning and resource allocation between the census years. There is a 10 year gap in the census information per municipality, making it difficult to plan and allocate resources for infrastructure in the years between censuses.

The difference in methodology by which the data was captured is key in understanding the variances among the different sources of information. The General Household Survey and Community Survey use various sampling techniques. In the case of the General Household Survey (GHS), 30 000 dwelling units are covered and in case of the Community Survey 2007 (CS), the sample size was 17 098 Enumerator Areas (EA's). The Department of Water and Environmental Affairs (DWEA) and the Department of Energy (DE) on the other hand use the 2001 census as a base, and update their data sets annually. The 2009 figure supplied by the municipalities for basic water and sanitation make up the municipal source data and were captured in a template via the comprehensive infrastructure planning process. A pre-populated template with service delivery information from mainly Stats SA was sent to municipalities. The municipalities corrected the information and returned the completed template to COGTA. In the case of free basic services, a similar method of making available a template to municipalities to complete is applied. Control measures and quality controls were applied to data on free basic services received from the municipalities (Annexure A, Data Collection Methodology).

Understanding the need to start somewhere, given the contestation around service delivery statistics, a Memorandum of Understanding (MOU) between Statistics South Africa and the Department of Cooperative Governance and Traditional Affairs (COGTA) was signed on 06 June 2009. Prior to the signing of the MOU, officials from COGTA, Stats SA and sector departments worked as a collective on the various information sources, focusing on its methodology, limitations and purpose. In this way a shared understanding of variances among the various data sets has been presented in a very constructive manner that simply indicates where we are with regard to access to water, sanitation, electricity and refuse removal and the backlogs per municipality.

Personnel from Stats SA, COGTA, relevant sector departments, National Treasury, South African Local Government Association (SALGA) and municipalities worked together under the umbrella of the Municipal Data Quality Improvement Programme to achieve this publication.

It is from this very basic presentation of service delivery information per municipality that our attention is drawn to some very interesting trends.

The various information sources (GHS, 2008, CS 2007, DWEA, 2008, Municipalities, 2009) presented in this publication indicate that more than 80% of households in the country have access to water at a basic level of service which is a stand pipe within 200 metres from the household, as a minimum. With regard to sanitation more than 67% of households in the country have access to sanitation at a basic level of service which is a ventilated improved latrine per household, as a minimum.

72,7 % of households are connected to the grid (DME, 2008) and 59% of all households in the country have access to adequate refuse removal service at least once per week (CS, 2007).

In terms of the percentage access of households to basic water, sanitation, electricity, and refuse removal the information for GHS (2007), CS (2007), DWEA (2008) and municipalities (2009) are variable, yet comparable in terms of the trends exhibited.

The percentage variation among the various data sources may be due to: (i) differences in the date stamp, (ii) methodology by which the data was gathered by the different entities, (iii) variances in the total number of households and (iv) interpretation of service levels for water, sanitation, electricity and refuse removal and the application thereof.

Comparative analysis of the backlog figures for water and sanitation indicate higher figures from municipal sources. Stats SA 2007, reporting 11,3% of households below a basic level of service, DWEA 2008, reporting 10,3% and Municipal sources reporting 19,3%.

In terms of Free Basic Services, the information from Statistics SA underscores the coverage of free basic water, sanitation, electricity and refuse removal as reported by municipalities. The differences are attributable to ascertaining the actual number of indigent household per municipality and difference in methodology used to gather the data with regard to basic services.

Whilst this publication deals with the quantification of the services backlog per sector, a parallel process addresses how individual households are experiencing all services. This is achieved through the development Universal Household Access to Basic Services (uHABS) Index. The uHABS index indicates service delivery progress with regard to water, sanitation, electricity and domestic refuse removal, as reported by households in the community survey 2007 (Annexure C).

It is anticipated that this report will:

- Provide leadership on the measurement and monitoring of basic services and reporting on service delivery more accurately and more consistently.
- To communicate to communities, planning practitioners and decision-makers on the status and progress with regard to basic services.

1. Purpose of the Report

- The main purpose of this publication is to get a sense of the various information sources, and an appreciation of the differences in its methodology.
- Provide a base for robust debate and further work on streamlining processes to measure more consistently the status and progress with regard to basic services, as we gear to achieve universal access by 2014.
- Serve as an information source for planning and resource allocation between censuses.

2. Scope of the Report

- The report includes the status of basic services, namely water, sanitation, electricity and refuse removal for each municipality.
- Contextualise and understand the different data sources that exist.

3. Finding Common Ground for Reporting on Basic Services

The current practice is that national departments publish service delivery statistics pertaining to their mandate. While there is no specific legislation that prohibits this practice, a number of problems have been encountered, which are:

- Statistics on similar indicators tend to differ depending upon the reporting entity.
- There are no agreed upon standards for collecting and verifying data as well as measuring performance, which affects the statistics and reporting derived from the data.
- There is no agreed upon approach regarding how the reporting of statistics can be executed for the purpose of public consumption.
- The public and private sectors need to have a common statistical basis from which to plan and assess implementation programmes and progress. This cannot happen if the statistics are not authenticated or at least the process of data validation sanctioned by Stats SA has occurred.
- Against this background, it is clear that if publications with unreliable service delivery statistics by more than one authority continue, the outcome will be further public confusion and will affect public confidence in statistics reported by government. The problem has already manifested itself on a number of occasions, resulting in members of the public, government and politicians

questioning the accuracy and consistency of government reporting with regard to service delivery statistics.

- As much as it is a constitutional mandate for each Ministry, sector department, provincial department or municipality to discharge responsibility and accountability for their business mandate, including the publishing of statistics, there is a need to streamline and perfect the reporting system in a manner that will ensure integrity of statistics reported to government, the general public and the private sector.
- The COGTA in partnership with Stats SA seeks to find a solution to remedy the problem of a lack of common methodologies towards the generation of statistics, to agree on a credible baseline and update data on basic services and infrastructure provision.

4. National Perspective

- One of the key priority projects of Government is the speeding up of community infrastructure with intensified efforts to accelerate universal access to water, sanitation and electricity. This implies that by 2014 there should be decent human settlements and access by all households to these services.
- 88,6% of the population in South Africa enjoyed access to piped water. All provinces recorded an increase in the percentage of households that had access to piped water (based on the Community Survey, 2007).
- A little more than 60% of the households in South Africa had access to flush toilets (based on the Community Survey, 2007).
- Electricity for lighting has increased in all provinces, with 80% of households in South Africa using electricity for lighting (based on the Community Survey, 2007).
- A total of 7,4 million households in South Africa had refuse removed at least once a week (based on the Community Survey, 2007).

5. Provincial Perspective

5.1 Water: Access to basic and higher levels of service

Goal

- All households to have basic level of water by 2014.

Indicator

- Number of households receiving basic level of water supply.

Definition

- Higher level of service includes piped water inside dwelling.
- Basic level of service includes piped water inside yard and piped water within 200m.

Data source

- Stats SA, Census 2001.
- Stats SA, GHS – July 2007 survey based on households.
- Stats SA, Community Survey February 2007 based on households.
- DWEA ,2008, data based on updated census 2001 (households).
- Municipal Source, 2009, data gathered via comprehensive infrastructure planning in April 2009.

Interpretation

- In terms of the percentage of households that have access to basic water the data sets for GHS (2007), CS (2007), DWEA (2008) and Municipal Source (2009) are variable, yet comparable in terms of the trends exhibited.
- The percentage variation may be due to:
 - (I) Date stamp of the data;
 - (II) Methodology by which the data were gathered;
 - (III) Total number of households varying per data set; and
 - (IV) Interpretation of the service levels for water and the application thereof.

Data note/explanatory note

- Data include the local municipalities, metropolitan municipalities and exclude the District Management Areas (DMAs).
- Household access to water figures determined by adding, households receiving piped water inside dwelling, piped water inside yard and piped water within 200m.
- Table 1 reflects a summation of the unit data contained in Annexure D.
- Number of households for any given year may vary due to methodology or demographic model used.

5.2 Household Water Backlogs

Western Cape	1,211,414	1,367,171	38,171	2.8%	1,359,874	14,866	1.1%	1,422,725	33,784	2.4%	1,371,217	347,686	25.4%		
Grand Total	11,782,636	13,260,928	1,499,928	11.3%	12,478,152	1,414,782	11.3%	12,996,300	1,336,893	10.3%	12,809,845	2,477,506	19.3%		

Goal

- All households to have basic level of water by 2014.

Indicator

- Number of households below basic level of water supply.

Definition

- Below basic level constitutes a backlog and includes, piped water further than 200m, springs, rain water tanks, dam/pool/stagnant water and water vendors.

Data source

- Stats SA, Census 2001.
- Stats SA, GHS – July 2007 survey based on households.
- Stats SA, Community Survey February 2007 based on households.
- DWEA ,2008, data based on updated census 2001 (households).
- Municipal Source , 2009, data gathered via comprehensive infrastructure planning in April 2009.

Interpretation

- In terms of the percentage of households with water backlog the data sets for GHS (2007), CS (2007), DWEA (2008) and Municipal Source (2009) are variable, yet comparable in terms of the trends exhibited.
- The percentage variation may be due to:
 - (V) Date stamp of the data;
 - (VI) Methodology by which the data were gathered;
 - (VII) Total number of households varying per data set; and
 - (VIII) Interpretation of what constitutes a backlog and the application thereof

Data note/explanatory note

- Data include the local municipalities, metropolitan municipalities and exclude the DMAs.
- Household water backlog figures determined by adding, piped water further than 200m, springs, rain water tanks, dam/pool/stagnant water and water vendors.
- Table 2 reflects a summation of the unit data contained in Annexure D.
- Number of households for any given year may vary due to methodology or demographic model used.

5.3 Free Basic Water

Table 3: Free Basic Water

PROVINCE	Indigent Households Receiving FBW						
	STATISTICS SOUTH AFRICA NFCM, 2007		MUNICIPAL SOURCE, 2008		DWEA, 2008		
CENSUS, 2001	TOTAL INDIGENTS HOUSEHOLDS (Census 2001)	Indigent Households Receiving FBW	Indigent Households Receiving FBW, as a Percentage	Indigent Households Receiving FBW	Indigent Households Receiving FBW, as a Percentage	Indigent Households Receiving FBW, as a Percentage	
Eastern Cape	939,776	250,696	26.7%	327,596	34.9%	481,723	51.3%
Free State	425,049	212,872	50.1%	203,525	47.9%	425,003	100.0%
Gauteng	967,539	303,297	31.3%	245,603	25.4%	869,396	89.9%
KwaZulu-Natal	1,162,490	323,305	27.8%	883,621	76.0%	807,798	69.5%
Limpopo	744,676	201,601	27.1%	637,350	85.6%	508,092	68.2%
Mpumalanga	444,112	253,834	57.2%	224,690	50.6%	273,630	61.6%
North West	440,733	306,275	69.5%	112,161	25.4%	276,909	62.8%
Northern Cape	118,194	67,924	57.5%	85,019	71.9%	81,052	68.6%
Western Cape	290,213	357,655	123.2%	118,341	40.8%	207,309	71.4%
Total	5,532,782	2,277,459	41.2%	2,837,906	51.3%	3,930,913	71.0%

Note: Indigent household is a household that qualifies to receive some or all basic services for free because they have no income or a low income. These households must have been identified by the municipality and appear on the indigent register, in line with the municipal indigent policy.

Goal

- All indigent households to have access to Free Basic Water by 2014.

Indicator

- Number of indigent households receiving Free Basic Water.

Definition

- An amount of water determined by government that should be provided free to poor households to meet basic needs, currently set at 6kl per month per household.

Data source

- Stats SA, Census 2001.
- Stats SA, NFCM - 2007, Survey-based municipalities – Stats SA.
- Municipal Source – 2008, based on municipality reports.
- DWEA – 2008, data based on updated census 2001 (households).

Interpretation

- Bearing in mind methodological differences among the three Departments, households with access to Free Basic Water vary significantly across all the three Departments (Municipal Source, DWEA and Stats SA).
- Difference in data collection methodology could be one of the factors affecting the households' differentials across all three Departments (Municipal Source, DWEA and Stats SA).
- One of the reasons that account for differences between DWEA and Municipal Source figure is due to the fact that COGTA only counts households receiving measured (6 kl) water per policy prescription, whereas DWEA's statistics is inclusive of households receiving water by other means other than piped household connections.
- Some municipalities extend the provision of FBW to households that are not indigent and this explains why some municipalities have provided FBW to 100% or more of the identified indigent households.
- The percentage of households served with FBW (Table 3) is measured against the total indigent households from the Census 2001, the reason for this, is that this was adopted as the target the department had to service with FBS by 2014.

Data note/explanatory note

- The table reflects data from Stats SA, COGTA and DWEA.
- Table 3 reflects a summation of the municipal unit data contained in Annexure E.
- There are different probable scenarios why there are hyphenated (-) data cells on FBW Annexure E, firstly it might be that the municipality or district in question is not providing the service(s) (most likely on the beneficiary columns) or secondly that there was no data provided (most likely the total households or indigent columns).

5.4 Access to Sanitation

Table 4: Access to Sanitation

PROVINCE	STATISTICS SOUTH AFRICA						DWEA 2008				MUNICIPAL SOURCE 2008					
	CENSUS 2001	GENERAL HOUSEHOLD SURVEY 2007			COMMUNITY SURVEY 2007			Total no. of households	No. of households receiving basic and higher levels of service	Household access to sanitation, as a percentage	Total no. of households	No. of households receiving basic and higher levels of service	Household access to sanitation, as a percentage	Total no. of households	No. of households receiving basic and higher levels of service	Household access to sanitation, as a percentage
		Total no. of households	No. of households receiving basic and higher levels of service	Household access to sanitation, as a percentage	Total no. of households	No. of households receiving basic and higher levels of service	Household access to sanitation, as a percentage									
Eastern Cape	1,506,540	1,795,872	891,000	49.6%	1,584,791	729,375	46.0%	1,598,994	1,085,047	67.9%	1,634,642	838,632	51.3%			
Free State	758,112	873,415	632,000	72.4%	802,873	546,654	68.1%	795,862	530,346	66.6%	770,062	573,545	74.5%			
Gauteng	2,889,676	3,243,966	2,843,000	87.6%	3,174,152	2,720,427	85.7%	3,381,995	2,956,398	87.4%	3,174,143	2,942,706	92.7%

Mpumalanga	830,987	888,406	504,000	56.7%	940,309	477,711	50.8%	902,515	542,917	60.2%	1,024,416	573,574	56.0%			
North West	898,740	943,782	557,000	59.0%	911,120	486,658	53.4%	925,893	601,452	65.0%	924,430	484,291	52.4%			
Northern Cape	259,633	293,701	231,000	78.7%	257,125	195,190	75.9%	257,279	198,295	77.1%	273,887	218,714	79.9%			
Western Cape	1,211,414	1,367,171	1,270,000	92.9%	1,359,870	1,259,972	92.7%	1,422,725	1,332,028	93.6%	1,371,217	1,012,460	73.8%			
Grand Total	11,782,636	13,260,928	8,989,000	67.8%	12,478,128	8,029,840	64.4%	12,996,300	9,687,613	74.5%	12,809,845	8,639,462	67.4%			

Goal

- All households to have basic level of sanitation by 2014.

Indicator

- Number of households having access to basic level of sanitation.

Definition

- Higher level of service includes, flush toilet connected to sewerage system
- Basic level of service includes flush toilet with septic tank and PIT latrine with ventilation.

Data source

- Stats SA, Census 2001.
- Stats SA, GHS – July 2007 survey based on households.
- Stats SA, Community Survey February 2007 based on households.
- DWEA , 2008, data based on updated census 2001 (households).
- Municipal Source, 2009, data gathered via comprehensive infrastructure planning in April 2009.

Interpretation

- In terms of the percentage of households that have access to basic sanitation the data sets for GHS (2007), CS (2007), DWEA (2008) and Municipal Source (2009) are variable, yet comparable in terms of the trends exhibited.
- The percentage variation may be due to:
 - (IX) Date stamp of the data;
 - (X) Methodology by which the data were gathered;
 - (XI) Total number of households varying per data set; and
 - (XII) Interpretation of the service levels for sanitation and the application thereof.

Data note/explanatory note

- Data include the local municipalities, metropolitan municipalities and exclude the DMAs.
- Household access to sanitation figures determined by adding, households using flush toilet connected to sewerage system, flush toilet with septic tank and PIT latrine with ventilation.
- Table 4 reflects a summation of the unit data contained in Annexure F.
- Number of households for any given year may vary due to methodology or demographic model used.

5.5 Sanitation Backlogs

Table 5: Sanitation Backlogs

PROVINCE	CENSUS 2001	STATISTICS SOUTH AFRICA						DWEA 2008			MUNICIPAL SOURCE 2008		
		GENERAL HOUSEHOLD SURVEY 2007			COMMUNITY SURVEY 2007			Total no. of households	No. of households receiving below a basic level of service	Household sanitation backlogs, as a percentage	Total no. of households	No. of households receiving below a basic level of service	Household sanitation backlogs, as a percentage
		Total no. of households	No. of households receiving below a basic level of service	Household sanitation backlogs, as a percentage	Total no. of households Community Survey	No. of households receiving below a basic level of service	Household sanitation backlogs, as a percentage						
Eastern Cape	1,506,540	1,795,872	889,000	49.5%	1,584,791	855,416	54.0%	1,598,994	513,947	32.1%	1,634,642	796,010	48.7%
Free State	758,112	873,415	209,000	23.9%	802,873	256,219	31.9%	795,862	265,516	33.4%	770,062	196,517	25.5%
Gauteng	2,889,676	3,243,966	372,000	11.5%	3,174,152	453,725	14.3%	3,381,995	425,597	12.6%	3,174,143	231,437	7.3%

Limpopo	1,194,036	1,317,459	858,000	65.1%	1,215,941	854,735	70.3%	1,259,743	665,749	52.8%	1,319,755	803,990	60.9%
Mpumalanga	830,987	888,406	337,000	37.9%	940,309	462,598	49.2%	902,515	359,598	39.8%	1,024,416	450,842	44.0%
North West	898,740	943,782	372,000	39.4%	911,120	424,462	46.6%	925,893	324,441	35.0%	924,430	440,139	47.6%
Northern Cape	259,633	293,701	26,000	8.9%	257,125	61,935	24.1%	257,279	58,984	22.9%	273,887	55,173	20.1%
Western Cape	1,211,414	1,367,171	67,000	4.9%	1,359,870	99,898	7.3%	1,422,725	90,697	6.4%	1,371,217	358,757	26.2%
Grand Total	11,782,636	13,260,928	4,022,000	30.3%	12,478,128	4,448,288	35.6%	12,996,300	3,308,687	25.5%	12,809,845	4,170,383	32.6%

Goal

- All households to have basic level of sanitation by 2014.

Indicator

- Number of households that have access to sanitation.

Definition

- Below basic level constitutes a backlog and includes chemical toilets, pit latrine without ventilation, bucket latrine and no sanitation facility.

Data source

- Stats SA, Census 2001.
- Stats SA, GHS – July 2007 survey based on households.
- Stats SA, Community Survey February 2007 based on households.
- DWEA ,2008, data based on updated census 2001 (households).
- Municipal Source, 2009 data gathered via comprehensive infrastructure planning in April 2009.

Interpretation

- In terms of the percentage of households with sanitation backlog the data sets for GHS (2007), CS (2007), DWEA (2008) and Municipal Source (2009) are variable, yet comparable in terms of the trends exhibited.
- The percentage variation may be due to:
 - (XIII) Date stamp of the data;
 - (XIV) Methodology by which the data were gathered;
 - (XV) Total number of households varying per data set; and
 - (XVI) Interpretation of what constitutes a sanitation backlog and the application thereof.

Data note/explanatory note

- Data includes the local municipalities, metropolitan municipalities and exclude the DMAs.
- Household sanitation backlog figures determined by adding households using chemical toilets, pit latrine without ventilation, bucket latrine and no sanitation facility.
- Table 5 reflects a summation of the unit data contained in Annexure F.
- Number of households for any given year may vary due to methodology or demographic model used.

5.6 Free Basic Sanitation

Table 6: Free Basic Sanitation

Indigent households benefiting from indigent support system Sewerage and Sanitation			
STATISTICS SOUTH AFRICA			
NFCM, 2007			
PROVINCE	TOTAL INDIGENTS HOUSEHOLDS	Indigent households benefiting	Indigent households benefiting , as a Percentage
Eastern Cape	415,838	218,847	52,6%
Free State	215,878	185,074	85,7%
Gauteng	303,351	294,270	97,0%
KwaZulu-Natal	695,794	176,167	25,3%
Limpopo	452,014	107,809	23,9%
Mpumalanga	259,653	109,755	42,3%
North West	325,823	112,246	34,4%
Northern Cape	81,827	64,498	78,8%
Western Cape	359,544	352,888	98,1%
Total	3,109,722	1,621,554	52,1%

Note: Indigent household is a household that qualifies to receive some or all basic services for free because they have no income or a low income. These households must have been identified by the municipality and appear on the indigent register, in line with the municipal indigent policy.

Goal

- All indigent households to have access to FBS by 2014.

Indicator

- Total indigent households benefiting from free basic sanitation services.

Data source

- Stats SA, NFCM - 2007, survey-based municipalities.

Interpretation

- Table 4 above shows the proportion of indigent households identified by municipalities and indigent households benefiting from indigent support system for the year ended 30 June 2007. Of the 3,1 million indigent households, 1,6 million (52,1%) indigent households benefited from indigent support of sewerage and sanitation services.

Data note/explanatory note

- All data on table 4 'Sewerage and Sanitation' are drawn from one source, namely NFCM, 2007.

5.7 Access to Electricity

Table 7: Access to Electricity

Province	CENSUS 2001	DME 2008		
	Total no. of Households	Total no. of households	No. of households connected to the Grid	Household access to electricity, as a percentage
Eastern Cape	1,506,540	1,643,689	967,917	58.9%
Free State	758,112	813,693	611,824	75.2%
Gauteng	2,889,676	3,069,373	2,354,865	76.7%
KwaZulu-Natal	2,233,498	2,369,367	1,556,797	65.7%
Mpumalanga	1,194,036	868,892	635,026	73.1%
Northern Cape	830,987	261,082	214,279	82.1%
Limpopo	898,740	1,236,810	896,747	72.5%
North West	259,633	904,184	708,363	78.3%
Western Cape	1,211,414	1,303,591	1,123,025	86.1%
Grand Total	11,782,636	12,470,682	9,068,843	72.7%

Goal

- All households to have access to electricity by 2014.

Indicator

- Number of households connected to grid network.

Definition

- Higher level of service includes connection to the grid.
- Basic level of service includes 10 Amp connection.

Data source

- Stats SA, Census 2001.
- DE, 2008, data based on updated census 2001 (households).

Interpretation

- Data from DE, 2008 is not comparable with GHS (2007) and CS (2007) due to differences by which the data has been grouped and reported on GHS (2008) and CS (2007) report in terms of household access to electricity for cooking, lighting and heating, separately. For the purpose of this report a distinction is made between household connection to grid and non-grid (use of wood, coal and gas), which constitutes a backlog.

Data note/explanatory note

- Data includes the local municipalities, metropolitan municipalities and exclude the DMAs.
- Household access to electricity figures determined by considering only households that are connected to the grid.
- Table 7 reflects a summation of the unit data contained in Annexure G.
- The total number of households for any given year may vary due to methodology or demographic model used.
- A negative sign preceding unit data in Annexure G denotes households electrified as a result of the housing programme and consequently, the number of households receiving access to basic and higher levels may be reflected as greater than the actual number of households reflected some of these municipalities.

5.8 Electricity Backlogs

Table 8: Electricity Backlogs

Province	CENSUS 2001	DME 2008		
	Total no. of Households	Total no. of households	No. of households below a basic level of service	Electricity Backlogs, as a percentage
Eastern Cape	1,506,540	1,643,689	675,772	41.1%
Free State	758,112	813,693	201,869	24.8%
Gauteng	2,889,676	3,069,373	714,508	23.3%
KwaZulu-Natal	2,233,498	2,369,367	812,570	34.3%
Mpumalanga	1,194,036	868,892	233,866	26.9%
Northern Cape	830,987	261,082	46,803	17.9%
Limpopo	898,740	1,236,810	340,064	27.5%
North West	259,633	904,184	195,821	21.7%
Western Cape	1,211,414	1,303,591	180,566	13.9%
Grand Total	11,782,636	12,470,682	3,401,838	27.3%

Goal

- All households to have access to electricity by 2014.

Indicator

- Number of households not connected to grid network.

Definition

- Below Basic electrical supply constitutes a backlog and includes households using any of the following:
 - Gas;
 - Paraffin;
 - Wood; and
 - Coal.

Data source

- Stats SA, Census, 2001.
- DE, 2008 data based on updated census 2001 (households).

Interpretation

- Data from DE, 2008 is not comparable with GHS (2007) and CS, 2007 due to differences by which the data have been grouped and reported on. The General Household Survey, 2008 and Community Survey, 2007 report in terms of household access to electricity for cooking, lighting and heating, separately. For the purpose of this report a distinction is made between household connection to grid and non-grid (use of wood, coal and gas) which constitutes a backlog.

Data note/explanatory note

- Data includes the local municipalities, metropolitan municipalities and exclude the DMAs.
- Household electricity backlogs figures determined by adding households using gas, paraffin, wood and coal.
- Table 8 reflects a summation of the unit data contained in Annexure G.
- The total number of households for any given year may vary due to methodology or demographic model used.

5.9 Free Basic Energy

Table 9: Free Basic Energy

PROVINCE	Number of indigent households benefiting from Free Basic Energy					
	STATISTICS SOUTH AFRICA		NFCM, 2007		MUNICIPAL SOURCE, 2008	
	CENSUS, 2001		Indigent households receiving FBE	Indigent households receiving FBE	Households Receiving FBE	Households Receiving FBE, as a Percentage
	TOTAL INDIGENTS HOUSEHOLDS					
Eastern Cape	939,776	242,110	25.8%	348,338	37.1%	
Free State	425,049	191,101	45.0%	481,939	113.4%	
Gauteng	967,539	297,205	30.7%	800,064	82.7%	
KwaZulu-Natal	1,162,490	149,228	12.8%	277,702	23.9%	
Limpopo	744,676	87,890	11.8%	316,215	42.5%	
Mpumalanga	444,112	64,725	14.6%	219,510	49.4%	
North West	440,733	122,987	27.9%	97,895	22.2%	
Northern Cape	118,194	60,123	50.9%	88,983	75.3%	
Western Cape	290,213	352,612	121.5%	595,498	205.2%	
Total	5,532,782	1,567,981	28.3%	3,226,144	58.3%	

Note: Indigent household is a household that qualifies to receive some or all basic services for free because they have no income or a low income. These households must have been identified by the municipality and appear on the indigent register, in line with the municipal indigent policy.

Goal

- All indigent households to have access to FBE by 2014.

Indicator

- Total number of indigent households receiving FBE.

Definition

- An amount of electricity determined by government that should be provided free to poor households to meet basic needs, currently set at 50kW per month per household.

Data source

- Stats SA, Census 2001.
- Municipal Source, 2008, based on Municipality and Eskom reports.
- Stats SA, NFCM - 2007, Survey based municipalities.

Interpretation

- Large percentage variation (51,4%) between the NFCM 2007 and COGTA 2008 data sets.
- The large scale percentage variation could be attributed to methodological difference in data collection.
- Some municipalities extend the provision of FBE to households that are not indigent and this explains why some municipalities have provided FBE to 100% or more of the identified indigent households.
- The percentage of households served with FBE (Table 9) is measured against the total number of indigent household from the Census 2001, the reason for this is that, this figure was adopted by the department as the target of households to be serviced with FBS by 2014.

Data note/explanatory note

- Data from both Departments dates.
- The difference between the figures resulted from the different definitions and reference period used to report the data.
- Table 9 reflects a summation of the unit data contained in Annexure Free Basic Energy.
- There are different probable scenarios why there are hyphenated (-) data cells on FBE Annexure H, firstly it might be that the municipality or district in question is not providing the service(s) (most likely on the beneficiary columns) or secondly that there was no data provided (most likely the total households or indigent columns).

5.10 Refuse Removal

Table 10: Refuse Removal

Province	STATISTICS SOUTH AFRICA						
	Total no. of Households Census 2001	Total no. of households General Household Survey (GHS, 2007)	No. of households receiving basic and higher levels of service (GHS, 2007)	Household access to refuse removal (GHS, 2007), as a percentage	Total no. of households Community Survey (CS, 2007)	No. of households receiving basic and higher levels of service (CS, 2007)	Household access to refuse removal (CS, 2007), as a percentage
Eastern Cape	1,506,540	1,795,872	685,000	38.1%	1,583,802	586,539	37.0%
Free State	758,112	873,415	651,000	74.5%	802,861	597,249	74.4%
Gauteng	2,889,676	3,243,966	2,756,000	85.0%	3,174,153	2,691,334	84.8%
KwaZulu-Natal	2,233,498	2,537,156	1,236,000	48.7%	2,231,961	1,125,159	50.4%
Limpopo	1,194,036	1,317,459	222,000	16.9%	1,215,929	214,605	17.6%
Mpumalanga	830,987	888,406	386,000	43.4%	940,314	372,530	39.6%
North West	898,740	943,782	461,000	48.8%	911,126	478,842	52.6%
Northern Cape	259,633	293,701	228,000	77.6%	257,111	183,500	71.4%
Western Cape	1,211,414	1,367,171	1,221,000	89.3%	1,359,864	1,228,576	90.3%
Grand Total	11,782,636	13,260,928	7,846,000	59.2%	12,477,121	7,478,334	59.9%

Goal

- All households to have access to refuse removal by 2014.

Indicator

- Number of households receiving refuse removal service at least once a week.

Definition

- Higher level of service includes removal by local authorities/private company at least once a week.
- Basic level of service includes a communal skip.

Data source

- Stats SA, Census, 2001.
- Stats SA, GHS, 2007 – July 2007 survey based on households.
- Stats SA, Community Survey 2007, February 2007 based on households.

Interpretation

- ✚ The GHS, 2007 and Community Survey 2007 are comparable as both data sets are from the same source and reflects data of the same year.
- ✚ The percentage variation may be due to:
 - (XVII) Methodology by which the data were gathered;
 - (XVIII) Total number of households varying per data set; and
 - (XIX) Interpretation of the service levels for refuse removal and the application thereof.

Data note/explanatory note

- Data include the local municipalities, metropolitan municipalities and exclude the DMAs.
- Household access to refuse removal service figures are determined by considering only households receiving refuse removal service at least once a week.
- Table 11 reflects a summation of the unit data contained in Annexure I.
- The total number of households for any given year may vary due to methodology or demographic model used.

5.11 Refuse Removal Backlogs

Table 11: Refuse Removal Backlogs

Province	STATISTICS SOUTH AFRICA							
	Total no. of Households Census 2001	Total no. of households General Household Survey (GHS, 2007)	No. of households receiving below a basic level of service (GHS, 2007)	Household access to refuse removal (GHS, 2007), as a percentage	Total no. of households Community Survey 2007 (CS, 2007)	No. of households receiving below a basic level of service (CS, 2007)	Household refuse removal backlogs CS, 2007), as a percentage	
Eastern Cape	1,506,540	1,795,872	1,111,000	61.9%	1,583,802	997,263	63.0%	
Free State	758,112	873,415	222,000	25.4%	802,861	205,612	25.6%	
Gauteng	2,889,676	3,243,966	488,000	15.0%	3,174,153	482,819	15.2%	
KwaZulu-Natal	2,233,498	2,537,156	1,301,000	51.3%	2,231,961	1,106,802	49.6%	
Limpopo	1,194,036	1,317,459	1,096,000	83.2%	1,215,929	1,001,324	82.4%	
Mpumalanga	830,987	888,406	502,000	56.5%	940,314	567,784	60.4%	
North West	898,740	943,782	483,000	51.2%	911,126	432,284	47.4%	
Northern Cape	259,633	293,701	65,000	22.1%	257,111	73,611	28.6%	
Western Cape	1,211,414	1,367,171	146,000	10.7%	1,359,864	131,288	9.7%	
Grand Total	11,782,636	13,260,928	5,414,000	40.8%	12,477,121	4,998,787	40.1%	

Goal

- All households to have access to refuse removal by 2014.

Indicator

- Number of households receiving refuse removal service after a week or never.

Definition

- Below a basic service for refuse removal includes, removal by local authority/private company less often, communal refuse dump, own refuse dump, no rubbish disposal and other.

Data source

- Stats SA, Census 2001.
- Stats SA, GHS – July 2007 survey based on households.
- Stats SA, Community Survey 2007, February 2007 based on households.

Interpretation

- The GHS, 2007 and Community Survey 2007 are comparable as both data sets are from the same source and reflects data of the same year.
- The percentage variation may be due to:
 - (XX) Total number of households varying per data set; and
 - (XXI) Interpretation of what constitutes a refuse removal backlog and the application thereof.

Data note/explanatory note

- Data include the local municipalities, metropolitan municipalities and exclude the DMA.
- Household refuse removal backlog figures determined by adding removal by local authority/private company less often, communal refuse dump, own refuse dump, no rubbish disposal and other.
- Table 10 reflects a summation of the municipal unit data contained in Annexure I.
- The total number of households for any given year may vary due to methodology or demographic model used.

5.12 Refuse Removal

Table 12: Free Basic Refuse Removal

PROVINCE	Indigent households benefiting from indigent support system: Refuse Removal		
	STATISTICS SOUTH AFRICA		
	NFCM 2007		
	TOTAL INDIGENTS HOUSEHOLDS	Indigent households benefiting	Indigent households benefiting as a percentage
Eastern Cape	415,838	220,783	53.1%
Free State	215,878	187,067	86.7%
Gauteng	303,351	294,393	97.0%
KwaZulu-Natal	695,794	194,404	27.9%
Limpopo	452,014	68,193	15.1%
Mpumalanga	259,653	110,115	42.4%
North West	325,823	142,286	43.7%
Northern Cape	81,827	64,534	78.9%
Western Cape	359,544	353,804	98.4%
Total	3,109,722	1,635,579	52.6%

Note: Indigent household is a household that qualifies to receive some or all basic services for free because they have no income or a low income. These households must have been identified by the municipality and appear on the indigent register, in line with the municipal indigent policy.

Goal

- All indigent households to have access to FBS by 2014.

Indicator

- Total indigent households benefiting from refuse removal services.

Definition

- The basic refuse removal service level is defined as the most appropriate level of waste removal service provided based on site specific circumstances. Such a basic level of service, be it in an urban or rural set-up, is attained when a municipality provides or facilitates waste removal through:
 - On-site appropriate and regularly supervised disposal (applicable mainly to remote rural areas with low density settlements and farms supervised by the waste management officer);
 - Community transfer to central collection point (medium density settlements);
 - Organised transfer to central collection points and/or Kerbside collection (high density settlements); and
 - Mixture of 'b' and 'c' above for the medium to high density settlements.

Data source

- Stats SA, NFCM - 2007, Survey based municipalities.
- Table 12 reflects a summation of the municipal unit data contained in Annexure Refuse removal.

Interpretation

- Table 5 above shows the proportion of indigent households identified by municipalities and indigent households benefiting from indigent support systems for the year ended 30 June 2007. Of the 3,1 million indigent households, 1.6 million (52,6%) indigent households benefited from indigent support of Refuse Removal services.

Data note/explanatory note

- All data on table 5 'Refuse Removal' are drawn from one source, namely NFCM, 2007.

6. Application and Use of the Report

- Provide leadership on the measurement and monitoring of basic services that is transparent.
- Share with communities, planning practitioners, decision-makers the status and progress with regard to basic services.
- Provide baseline information to planning practitioners.
- Collectively improve reporting on service delivery more accurately and more consistently.
- Provide a basis to improve integrity of service delivery data across the spheres of government.

ANNEXURE A: DATA COLLECTION METHODOLOGY

This document outlines the comparisons between the data obtained from the following publications and departments: Non-Financial Census of Municipalities (NFC), General Household Survey (GHS), Community Survey (CS), the Department of Water and Environmental Affairs (DWEA), Department of Energy (DE) and the municipalities through the CIP process. The reporting outlines the methodology used in each of the publications stated below. It should be noted that the data may not be consistent for a number of reasons including the use of different data item definitions, classifications, scope, reference period, etc.

▪ General Household Survey (GHS)

The sample design used by GHS was based on a Master Sample (MS) and was developed specifically for the households sample survey. A multi-stage stratified areas probability sample was used and stratification was done per province and according to district councils within provinces. Approximately 3 000 Primary Sampling Units (PSUs) were selected. In each selected PSU a systematic sample of ten dwelling units was drawn, thus, resulting in approximately 30 000 dwelling units. All households in the sampled dwelling were enumerated.

▪ Community Survey (CS)

Community Survey (CS) uses two-stage stratified random sampling. Given that the main objective of the survey was to provide data at municipality level, each municipality was considered as an explicit stratum at the first stage. The second stage involved the selection of enumeration areas (EAs) within each municipality.

EAs were used in drawing up the sample for the 2001 census. The systematic simple random sampling method was used to select EAs. Out of 80 787 EAs, 79 466 were considered for sampling. A total of 1 321 EAs, of which 919 were institutions and 402 were recreational areas, was excluded. The final selected sample size for the survey was 17 098 EAs, translating to 274 344 sampled District Units (DU).

▪ Department of Water and Environmental Affairs (DWEA)

In 1994 the Department of Water Affairs and Forestry (DWAF) received the mandate, through the White Paper on Water Supply and Sanitation Policy: “to ensure that all South Africans have equitable access to basic water supply and sanitation services” specifically focusing on basic services and rural development.

In 1997 the Water Services Act changed this challenge to “ensure that all South Africans have equitable access to effective, economical and sustainable water supply and sanitation services”. This meant that higher levels of service needed to be addressed in addition to the basic services.

In order to understand the challenge, the Department mobilised a national team to gather information on water services and related issues. The purpose of this study was to serve as a platform to understand South Africa in all its water services related demographic aspects and to make the data available to all interested parties. The results of this were captured in a database, which is currently maintained and updated.

The methodology used to update estimated population/household, water and sanitation services levels is discussed in some detail below:

Population

The estimated population figures are based on the results of Census 2001 and are updated by DWAF annually using Stats SA population growth parameters as follows: Using the census totals for 1996 and 2001, exponential growth of the population was assumed and the inter census growth rate, r , was obtained using the equation below:

$$P_{t2} = P_{t1} * \exp[r * (t2 - t1)]$$

where 1 is the initial time and 2 is the final time.

$$\text{Hence, } r = 0.2 * \log_e (P_{2001} / P_{1996})$$

The assumption was made that r (the growth rate obtained between the 1996 and 2001 datasets) had remained constant. Community level populations are projected from 2001 to 2009/current year and backwards towards 1994 (once off) using the calculated growth rate.

Water Supply & Sanitation Service Levels

DWAF negotiated with Stats SA to gather information on water and sanitation supply service levels to South Africans during the Census 1996 and 2001 as well as the Community Survey 2007 and annual General Household Surveys.

The baseline water supply and sanitation service levels are updated by DWAF annually based on the following:

- Service levels are updated with the results of actual project delivery through implementation – MIG information;
- Should no actual project delivery figures be available, the delivery is calculated based on the financial allocation on municipal level (financial allocation / average unit cost = possible delivery based on the assumption that finances are used appropriately);

- Bucket system delivery is updated monthly based on actual delivery progress as provided by a management consultant responsible for project implementation; and
- Sanitation delivery figures are improved by quarterly inputs from the DWAF Sanitation Unit (based on information received from regional sanitation coordinators who are tasked with the responsibility of monitoring sanitation project implementation at local government level).

Actual water supply and sanitation service levels are used to derive/calculate the backlogs annually. DWAF ensures alignment with other stakeholders by comparison to other stakeholder data such as Stats, SA GHS & CS as well as DPLG and DBSA.

People/households served with Free Basic Water are updated in real time (using a system developed by DWA) by Provincial Support Units (PSU's) with delivery figures provided by Municipalities. Delivery is broken down into service levels: Above RDP, at RDP, below RDP and households/population with no access to formal water infrastructure.

- **Department of Energy (DE)**

The number of households and backlog in electricity connections are based on the 2001 census figures. These figures were then used to calculate the estimated backlog as at October 2001. Actual connections, as provided by Eskom and the Department of Energy (DE) (Municipal Programme) for the period November 2001 and December 31 to March 2006, were deducted from estimated backlogs as at October 2006 to provide an estimated electrification backlog up to 31 March 2006 (Growth in household numbers of 2% were recommended by Stats SA). The Department has now revised the growth in household's number i.e. 1% for rural municipalities and 2% for metros, bigger towns and municipalities that share its borders with other African countries.

Every year the actual connections from the Eskom programme and the Municipality programme (per municipality) are deducted from the previous year's figures.

The electricity backlog status is released once per annum (beginning of each financial year) as electricity connections on both programmes run for a year and are aligned with (DE) financial year.

- **Non-Financial Census of Municipalities**

The Non-Financial Census of Municipalities (NFCM) collects information directly from municipalities. The methods used for collection included personal visits, telephone calls, facsimiles, e-mails and post. All 283 municipalities were covered in this census for 2007. A response rate of 100% was attained. NFCM data are not necessarily

comparable with the Stats SA population census of 2001 and/or household survey data, mainly due to the following:

- The data source is municipalities as opposed to households; and
- The different definitions of 'household'. Most municipalities do not have a system for identifying multiple households served by one billing unit or delivery point.

- **Municipal Source**

- **Basic Services**

The Municipal Comprehensive Infrastructure Plan (CIP) provides a strategic plan for addressing the long-term sustainability of infrastructure in a municipality. It is therefore closely linked to the availability of accurate data on assets and service levels in a municipality. It is thus crucial that the most recent, accurate data be used in compiling such plans. However, various studies, projects, and programmes are conducted in municipalities, by provinces, and even from a national perspective to provide planning information to various implementers of projects. The result of this is that some discrepancies may exist between data sets for different services.

In compiling the CIPs the objective was to ensure that all such sources of data are aligned, and that the most recent data could be used. To this end, a process had been developed that was based upon the following principles:

- The most recent data on service levels were obtained from Stats SA: the data at ward level was used from the 2001 Census and this was augmented with summary data (at municipal level) from the 2007 Community Survey. A similar growth rate was assumed across all wards;
- All sector departments were asked to provide their latest backlog statistics and, where possible, these were then used to align the service level data;
- The data were then distributed to the municipalities, who were asked to update the data based upon local inputs;
- Apart from having to confirm (or adjust) these backlog figures, municipalities also had to identify projects that would address these backlogs; and
- The final data were then compared with national level statistics provided by sector departments (where available) again, and adjusted where required.

- **Free Basic Services**

The FBS data collection questionnaire/template is updated and dispatched to local municipalities via facsimile, e-mail, post and other instances. Municipalities are then expected to complete the questionnaire with data depicting current status of FBS

beneficiaries. After the questionnaire is completed as a control measure, the Municipal Managers are expected to sign the questionnaire giving consent to the data provided by their officials.

Where a selected unit does not respond in a given survey period, a value for the previous quarter is reported on. If data is subsequently provided, the previous value/figure is replaced with reported data. The data collection instrument used by COGTA in collecting FBW statistics is limited only to indigents receiving 6kl, thus those that have access to metered water supply. Indigent households who receive water through communal stand pipes, water tankers and boreholes are not included. COGTA then receives the questionnaire, before it is captured into an Excel data sheet, previous questionnaires are compared with the latest responses from municipalities. If any inconsistencies are detected municipalities are called upon to provide explanation as a means of verification.

Once the cross-checking process is complete, data is captured into an Excel spreadsheet. Once data capturing is complete, a process of verifying whether the data was captured as depicted on questionnaires resumes thereafter to ensure that no data was entered incorrectly. After the verification process, the COGTA then analyses the data and report are compiled. Once reports are approved by the authorized management team, it is ready to be published.

ANNEXURE B: DATA QUALITY IMPROVEMENT PROGRAMME

Overview

The Municipal Data Quality Improvement Programme focuses on working towards producing and publishing a credible service delivery baseline and to update data on basic local government services and infrastructure delivery. This will result in evidence-based and more consistent reporting and monitoring of service delivery across all spheres of government.

Objectives

The objectives of the Programme are:

- to assess the quality and coverage of data from the registers and administrative records of municipalities;
- to develop processes of improving the quality of the registers and administrative records data of municipalities to become sustainable sources for quality data;
- to strengthen the information management systems in municipalities so that they will become suitable for production of quality data; and
- to identify and adopt mechanisms for aligning the collection of data in the municipalities with the reporting requirements of the COGTA and other stakeholders.

Outcomes

The outcomes of the Programme are:

- Sustained maintenance of the production of quality statistics on basic services and infrastructure backlogs and progress;
- improved data production systems and statistical skills in municipalities and in the COGTA;
- COGTA capacity to generate statistics that can be compared with related statistics in the NSS;
- COGTA capacity to generate quality statistics for internal departmental use;
- Credible service delivery baseline and update data in respect of basic services and municipal infrastructure backlogs and progress;
- Improved validity of allocation of resources;
- improved service delivery planning and management decision-making;
- IDPs with quality baseline and updated statistical information; and
- credible government-wide information for reporting on, and monitoring of basic services and municipal infrastructure backlogs.

ANNEXURE C: uHABS INDEX

Universal Household Access to Basic Services (uHABS) Index. In parallel with the Data Quality Improvement Programme, COGTA has developed a Universal Household Access to Basic Services (uHABS) Index with assistance from the Support Programme for Accelerated Infrastructure Development (SPAID)), which is a joint Presidency / Business Trust Initiative.

The Index is being developed in recognition of the fact that an important aspect of the success or failure of the government's programme of service delivery is the ways in which such efforts are communicated to stakeholders. Proactive and full communication breeds confidence that the issues of service delivery backlog are being consistently addressed, which will in turn garner support for service delivery efforts. The uHABS Index is a vital tool in ensuring that such communication happens clearly and effectively, in a way understood by all.

The key objective for the uHABS index is therefore to be an indicator for independently measuring and communicating the extent and nature of basic service backlogs in communities and demonstrating progress in addressing these service backlogs. The index will enable a broad-based and consistent understanding of the challenges of and progress on the eradication of basic services infrastructure backlogs amongst defined audiences, and will also enable responsible authorities to participate in the uniform reporting framework.

The uHABS Index indicates service delivery progress in respect of water, sanitation, electricity and domestic refuse removal, as reported by households. The Index is based on Stats SA data (Census, Community and Household Surveys). The use of the Stats SA data for the uHABS index has the advantage of representing the perspective of households and end-users with regards to what they perceive to be their level of access to services. It also has the advantage of providing trend data for district municipalities and provinces since 1996. The uHABS Index does not engage in any sourcing or cleaning up of data, but only utilises official data agreed and released by Stats SA.

The presentation of performance and levels of access to basic services in the uHABS Index is based on the application of the minimum level for norms and standards in respect of service delivery as prepared by the COGTA and documented in this publication.

ANNEXURE D: ACCESS TO WATER

ANNEXURE D - HOUSEHOLD ACCESS TO WATER

PROVINCE	NAME OF MUNICIPALITY	COMMUNITY SURVEY 2007				DWAE 2008				MUNICIPAL SOURCE 2009				
		Total Households	Household access to water	Households below basic level of service/backlogs as a percentage	Households below basic level of service/backlogs	Total Households	Household access to water	Households below basic level of service/backlogs as a percentage	Households below basic level of service/backlogs	Total Households	Household access to water	Households below basic level of service/backlogs	Households below basic level of service/backlogs as a percentage	
Eastern Cape	Amathlath Local Municipality	36,989	29,607	81.4%	6,782	36,920	29,469	79.8%	7,451	36,387	30,271	83.2%	6,116	16.8%

ANNEXURE K: RSA MUNICIPALITIES AND DISTRICT MANAGEMENT
AREAS

ANNEXURE L: SPATIAL DISTRIBUTION OF WATER BACKLOGS
(CS 2007)

Household Water Backlogs Per Municipality Community Survey 2007

Administrative Boundaries

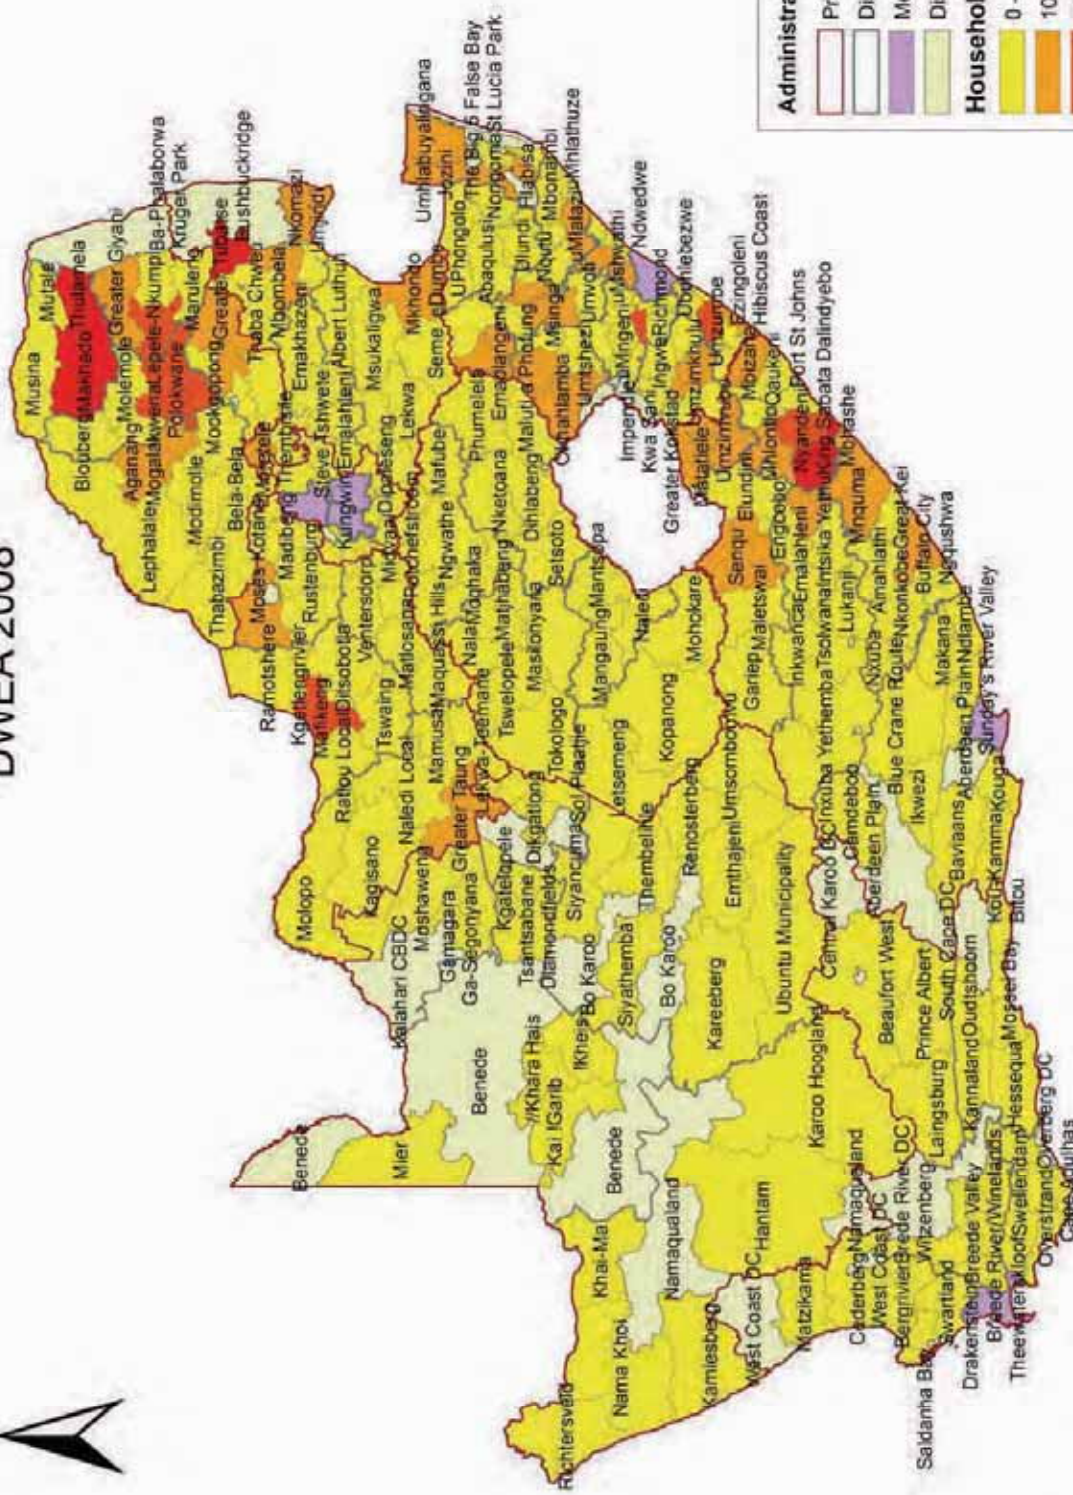

- Provinces
- District Municipalities
- Metropolitan Municipalities
- District Management Areas

Households

- 30 - 10000
- 10001 - 20000
- 20001 - 30000
- 30001 - 40000
- 40001 - 50000

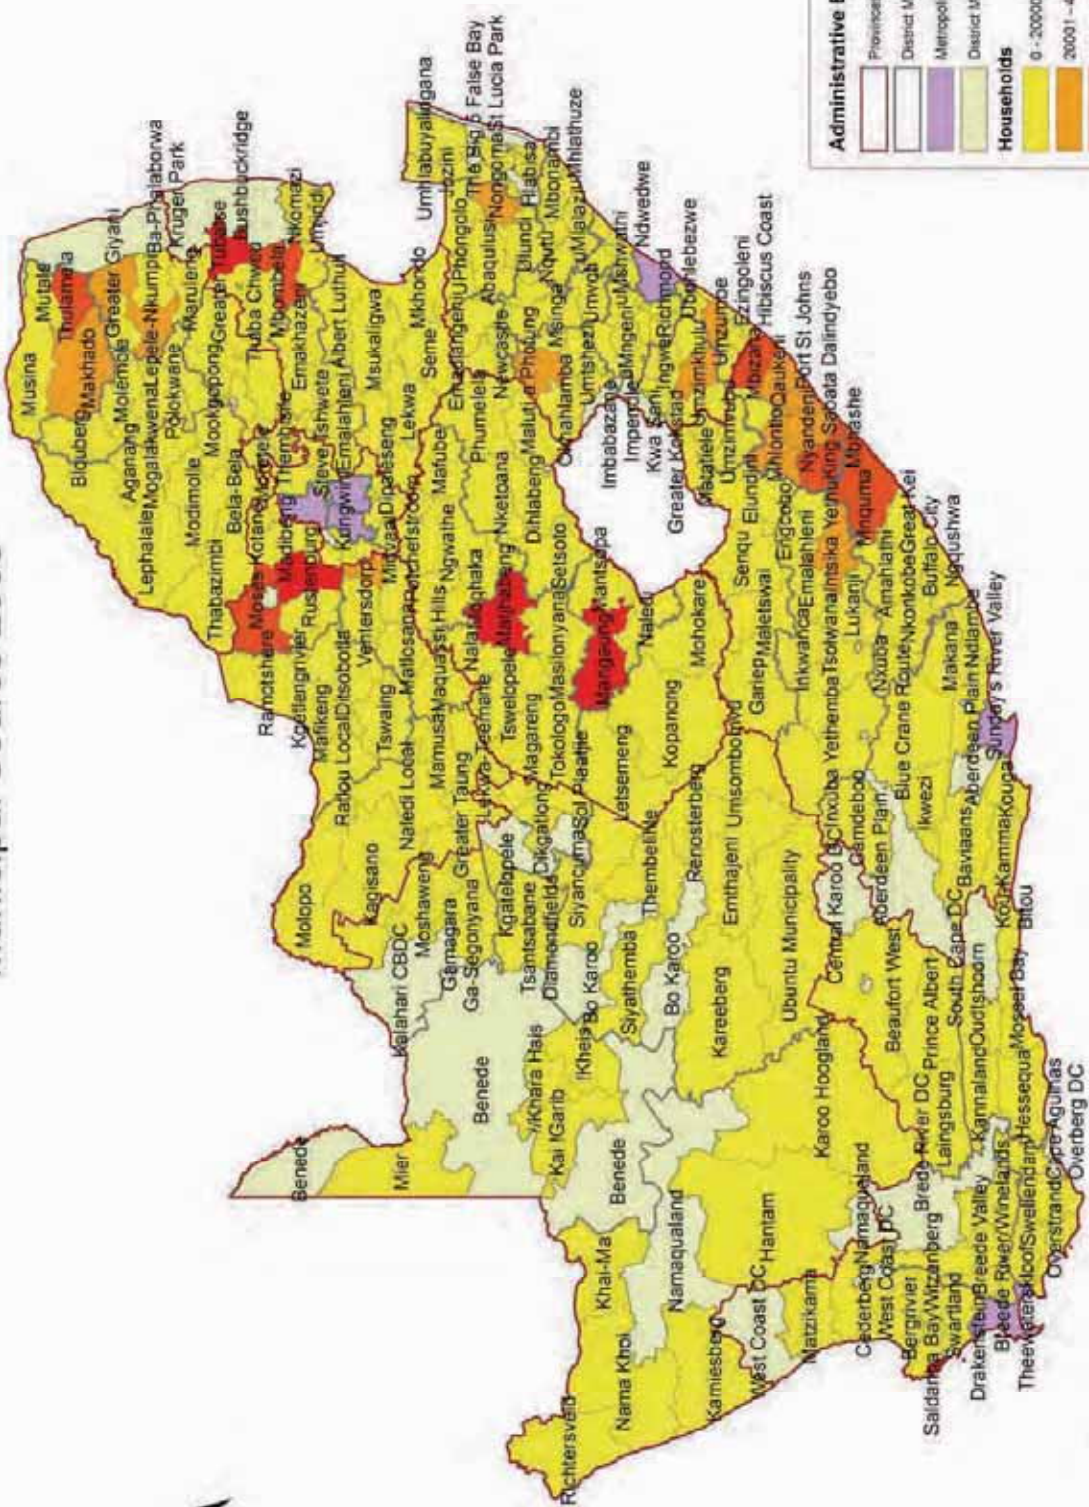

ANNEXURE M: SPATIAL DISTRIBUTION OF WATER BACKLOGS
(DWEA 2008)

Household Water Backlogs DWEA 2008

ANNEXURE N: SPATIAL DISTRIBUTION OF WATER BACKLOGS
(MUNICIPAL SOURCE 2008)

Household Water Backlogs Municipal Source 2008

Administrative Boundaries

- Provinces
- District Municipalities
- Metropolitan Municipalities
- District Management Areas

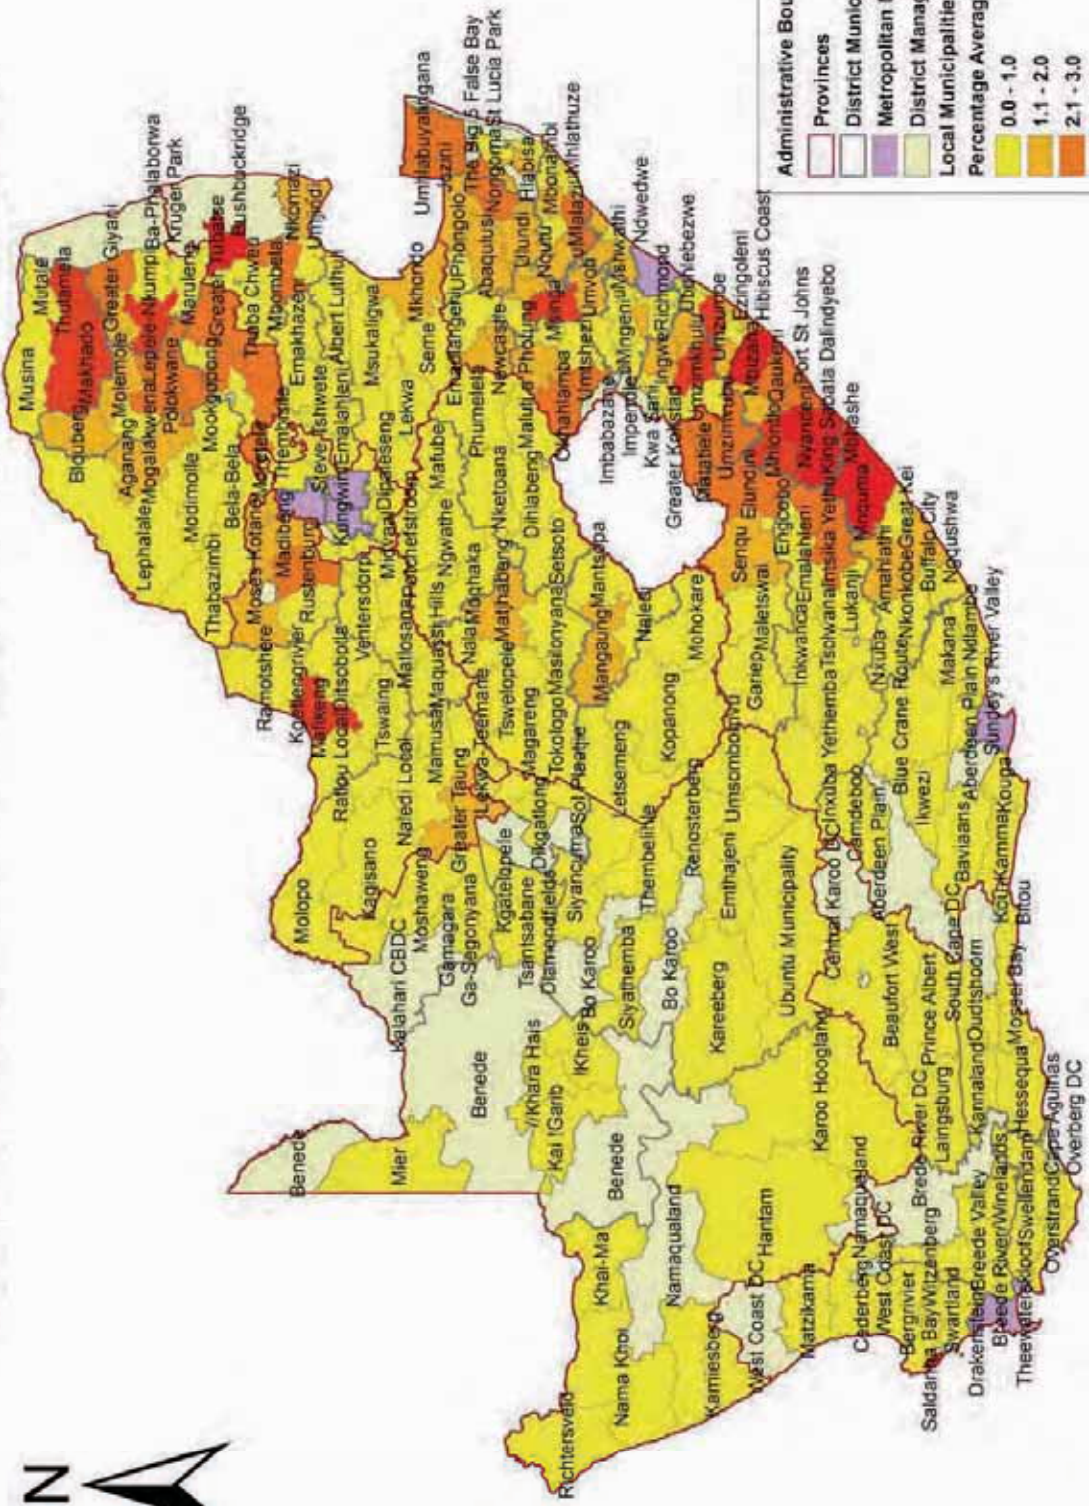

Households

- 0 - 20000
- 20001 - 40000
- 40001 - 60000
- 60001 - 80000

ANNEXURE O: AVERAGE NATIONAL SHARE OF WATER BACKLOGS

Average Percentage Share of National Water Backlog Community Survey 2007, DWEA 2008 And Municipal Sources 2008

250 125 0 250 Kilometers

Administrative Boundaries:

- Provinces
- District Municipalities
- Metropolitan Municipalities
- District Management Areas
- Local Municipalities

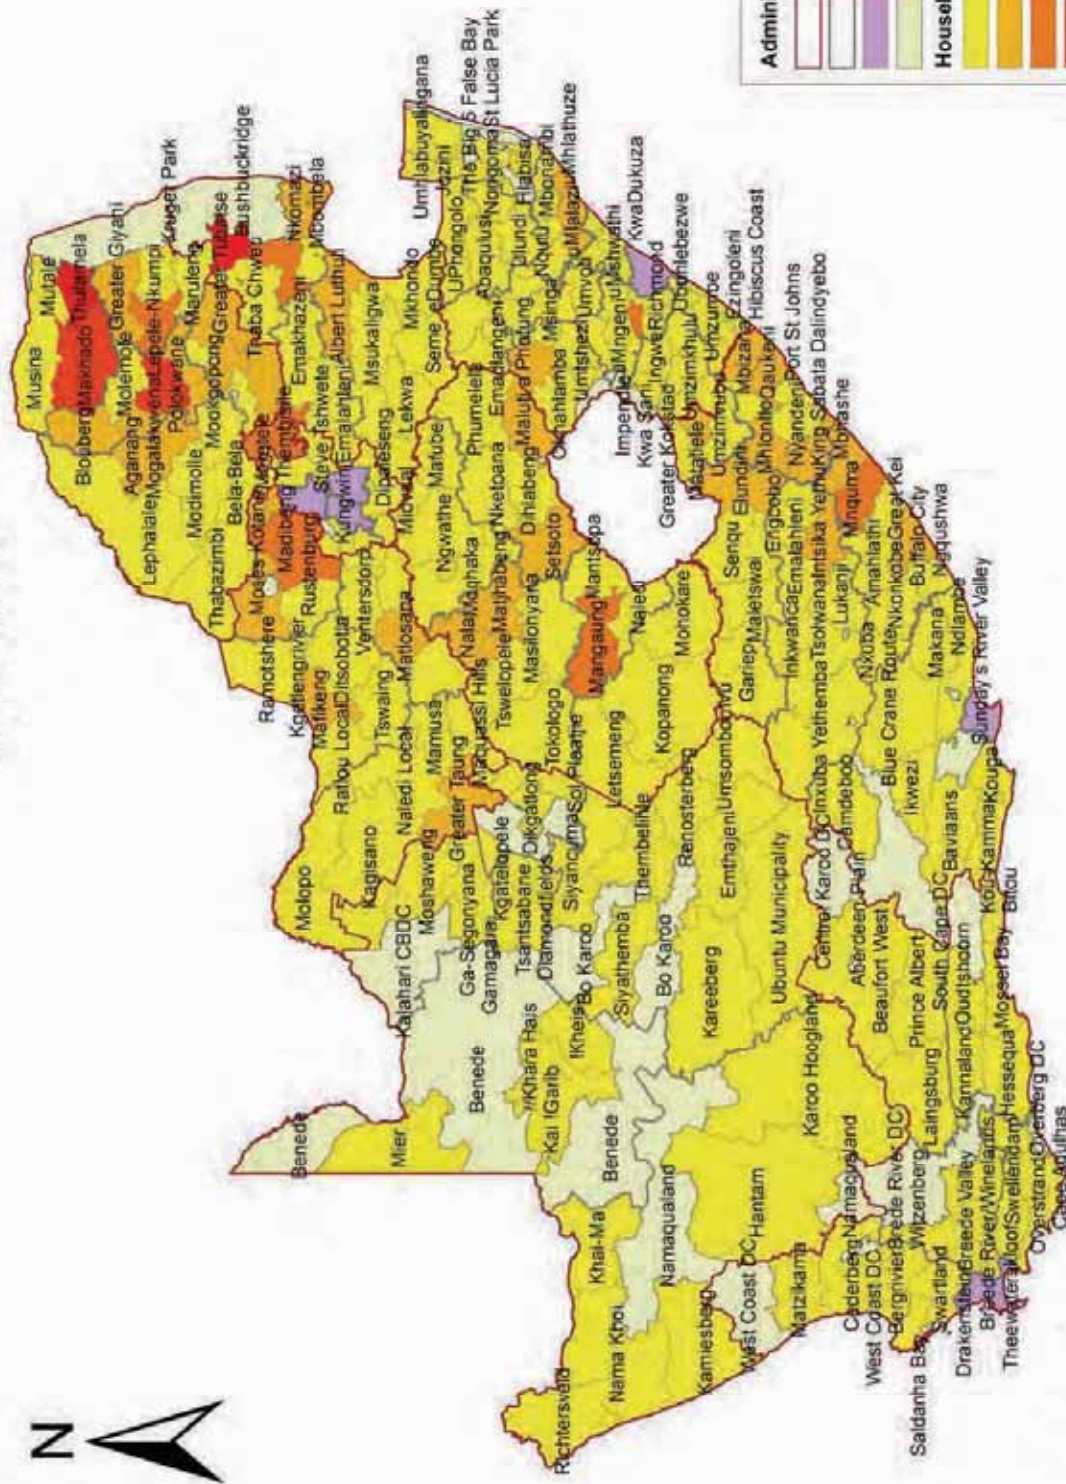

Percentage Average Share of Backlog

- 0.0 - 1.0
- 1.1 - 2.0
- 2.1 - 3.0
- 3.1 - 4.0
- 4.1 - 6.0

ANNEXURE P: SPATIAL DISTRIBUTION OF SANITATION BACKLOGS
(CS 2007)

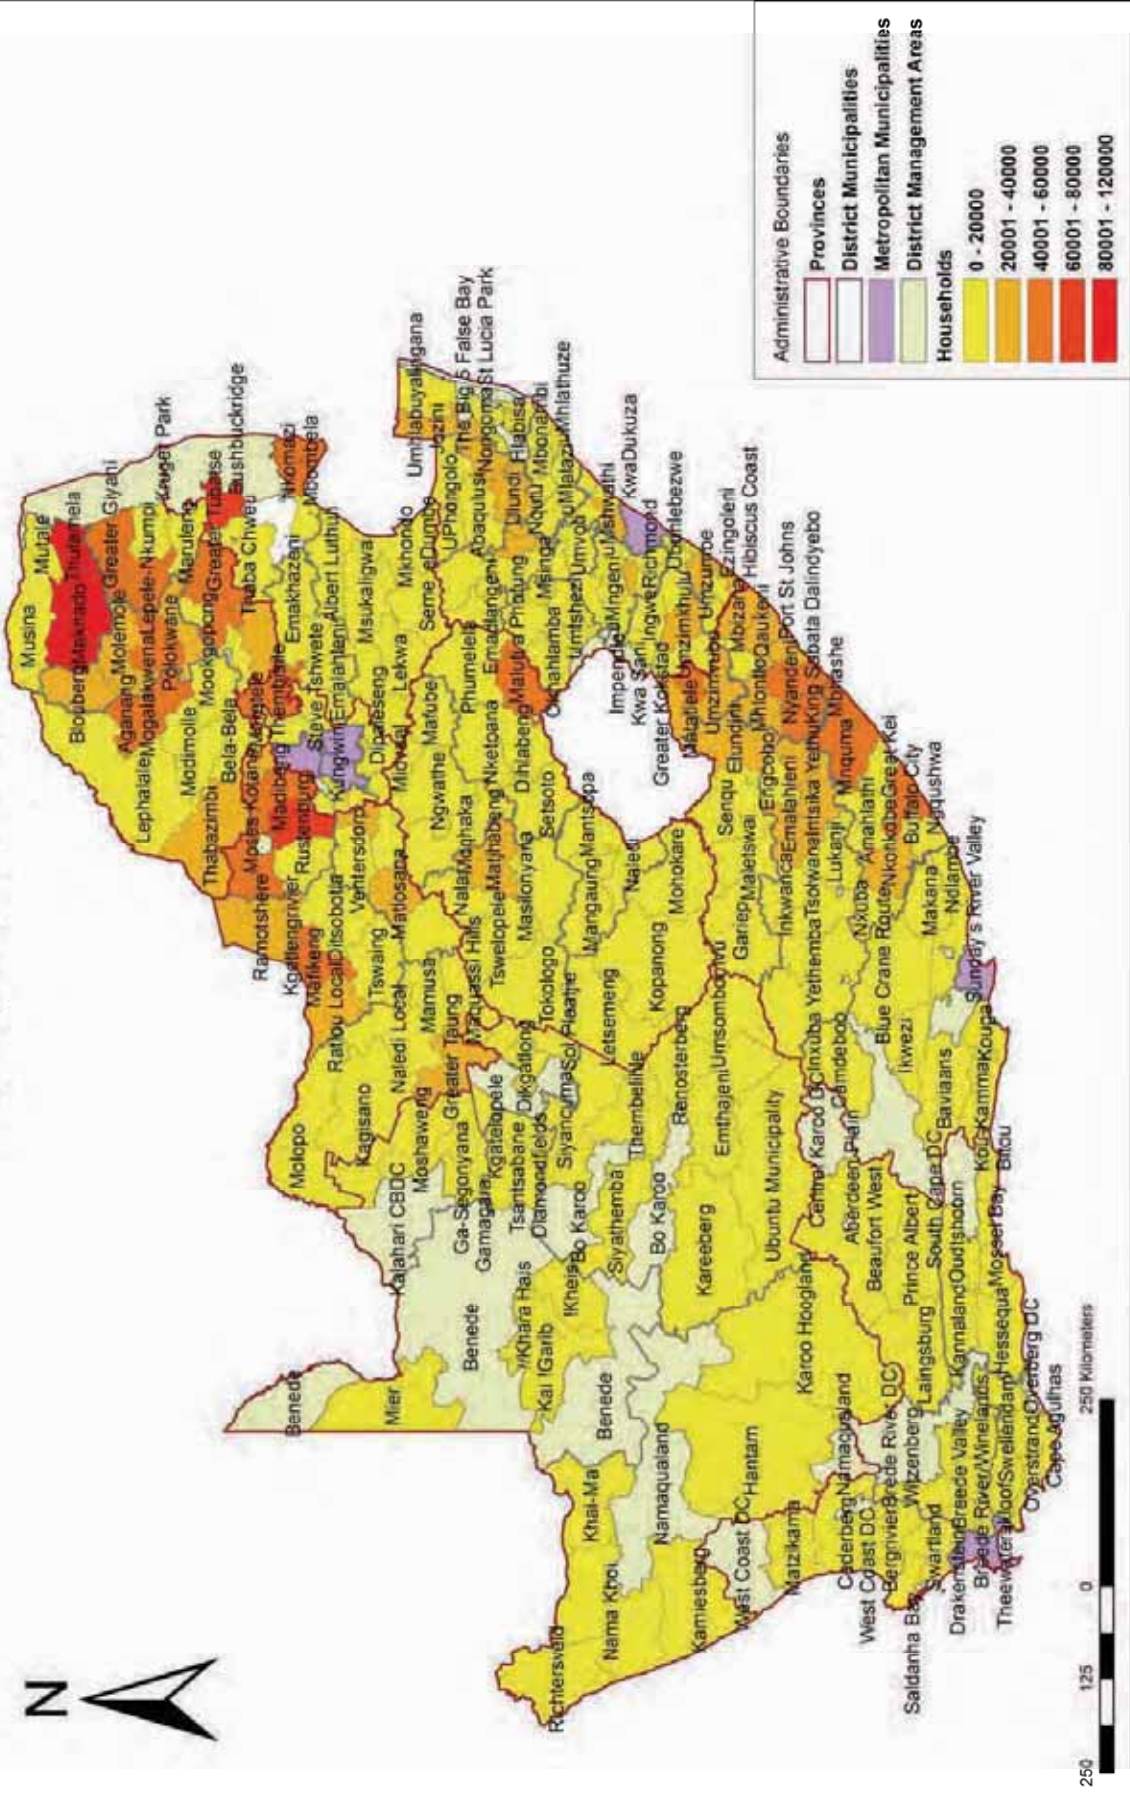

ANNEXURE Q: SPATIAL DISTRIBUTION OF SANITATION BACKLOGS
(DWEA 2008)

Household Sanitation Backlogs DWEA 2008

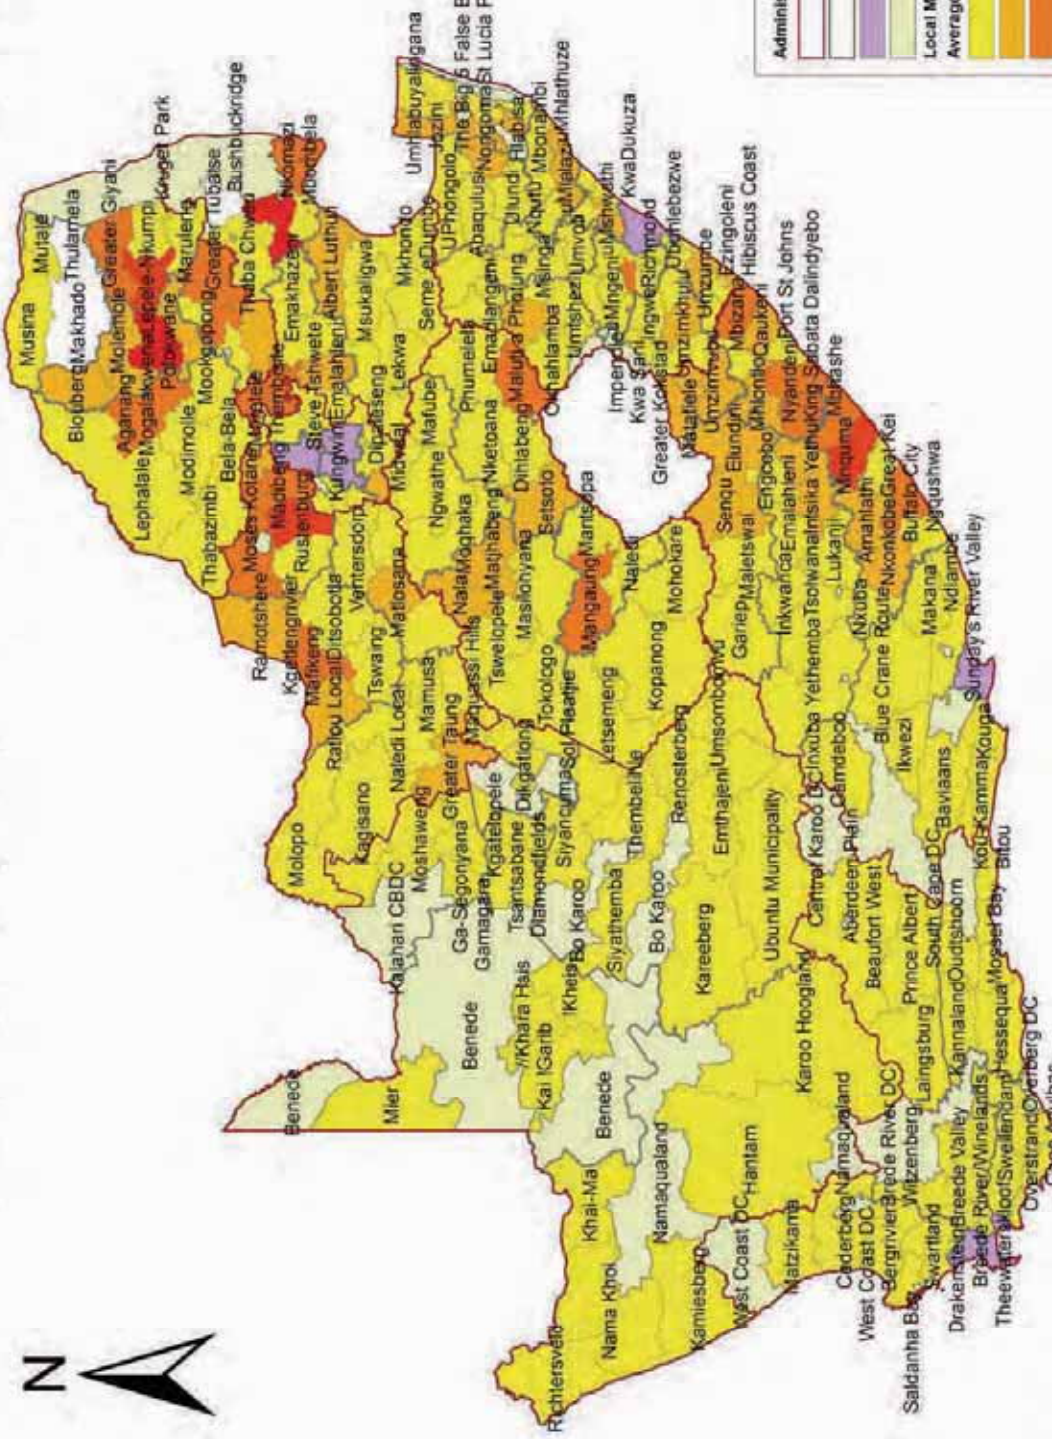

ANNEXURE R: SPATIAL DISTRIBUTION OF SANITATION
BACKLOGS (MUNICIPAL SOURCE 2008)

Household Sanitation Backlogs Municipal Sources 2008

ANNEXURE S: AVERAGE NATIONAL SHARE OF SANITATION
BACKLOGS

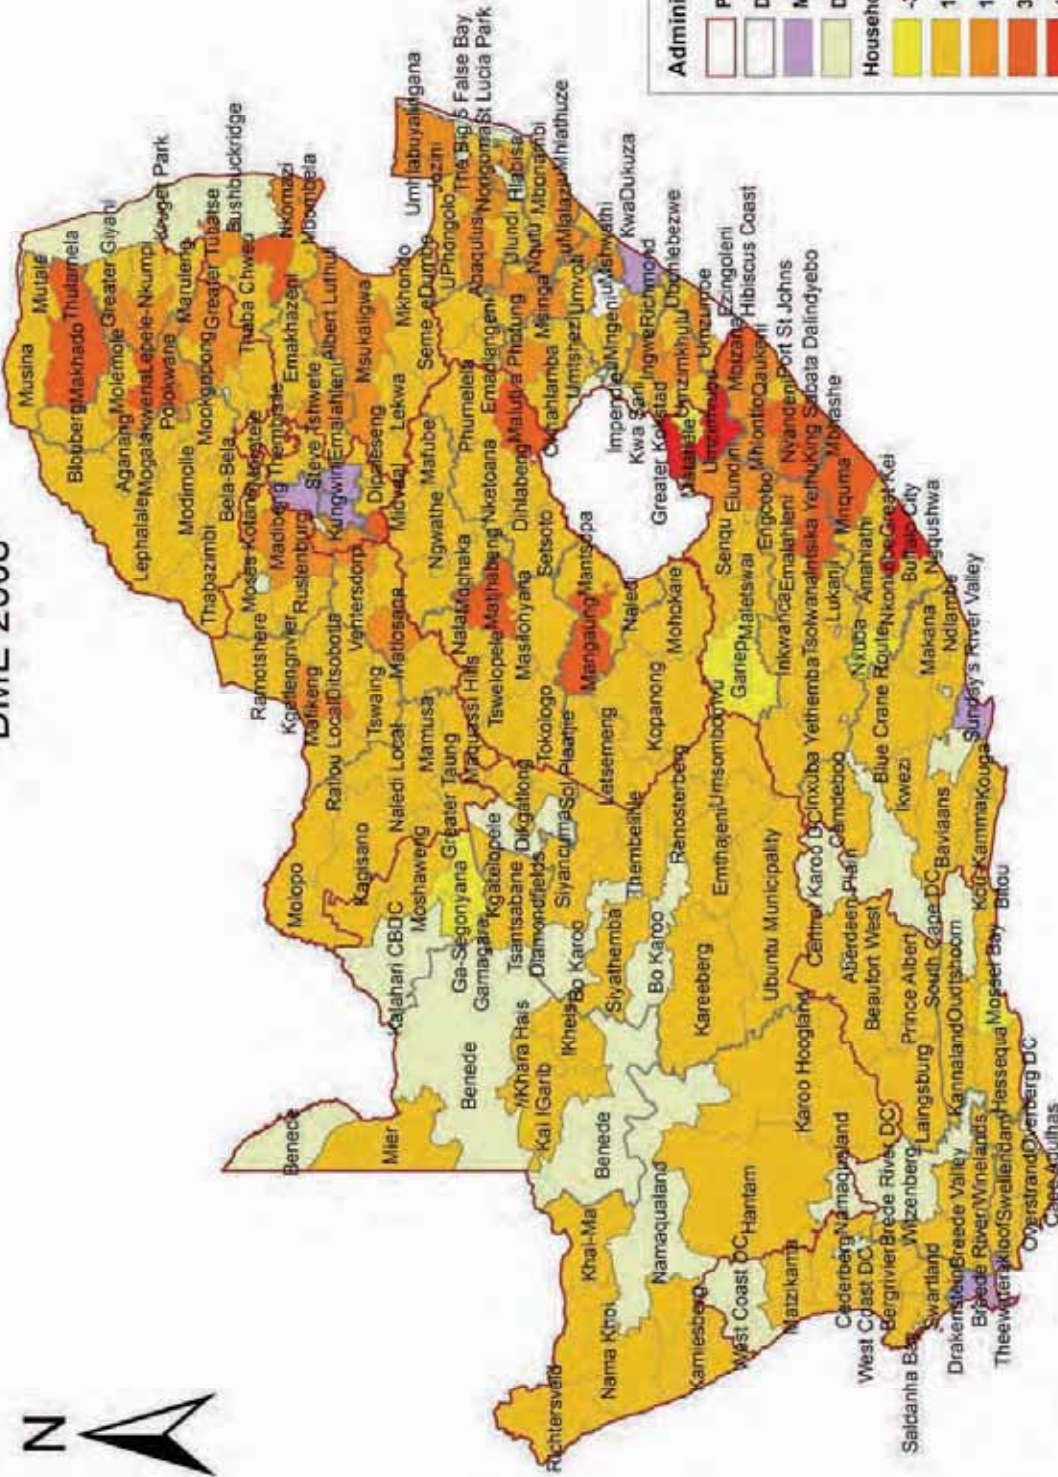

Average Percentage Share of National Sanitation Backlog Community Survey 2007, DWEA 2008 And Municipal Source 2008

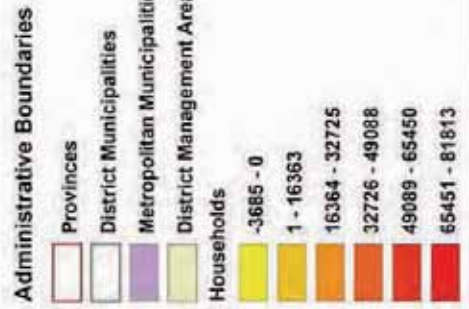

Administrative Boundaries	
	Provinces
	District Municipalities
	Metropolitan Municipalities
	District Management Areas
	Local Municipalities
Average Percentage Share of National Backlog	
	0.0 - 1.0
	1.1 - 2.0
	2.1 - 3.0
	3.1 - 4.0
	4.1 - 5.0

ANNEXURE T: SPATIAL DISTRIBUTION OF ELECTRICITY
BACKLOGS (DME 2008)

Household Electricity Backlogs DME 2008

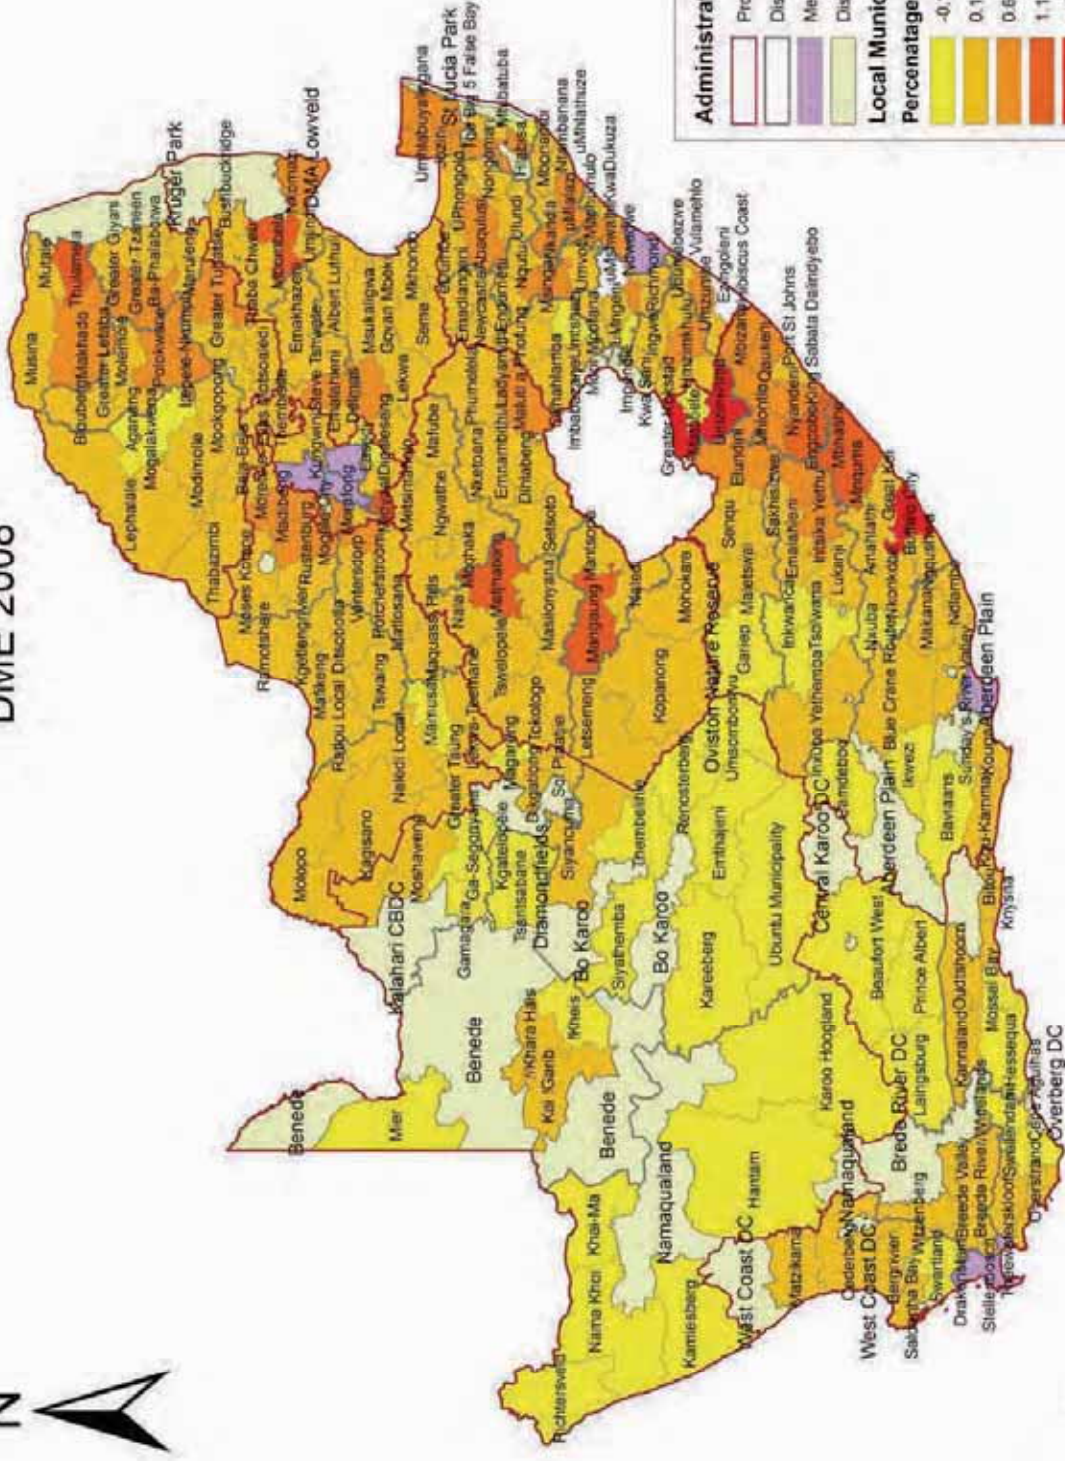

250 125 0 250 Kilometers

ANNEXURE U: MUNICIPAL SHARE OF NATIONAL BACKLOGS
(DME 2008)

Municipalities Share of National Electricity Backlog DME 2008

Administrative Boundaries

- Provinces
- District Municipalities
- Metropolitan Municipalities
- District Management Areas

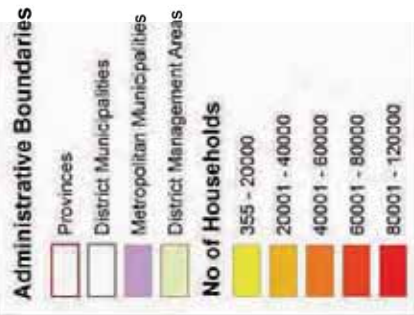

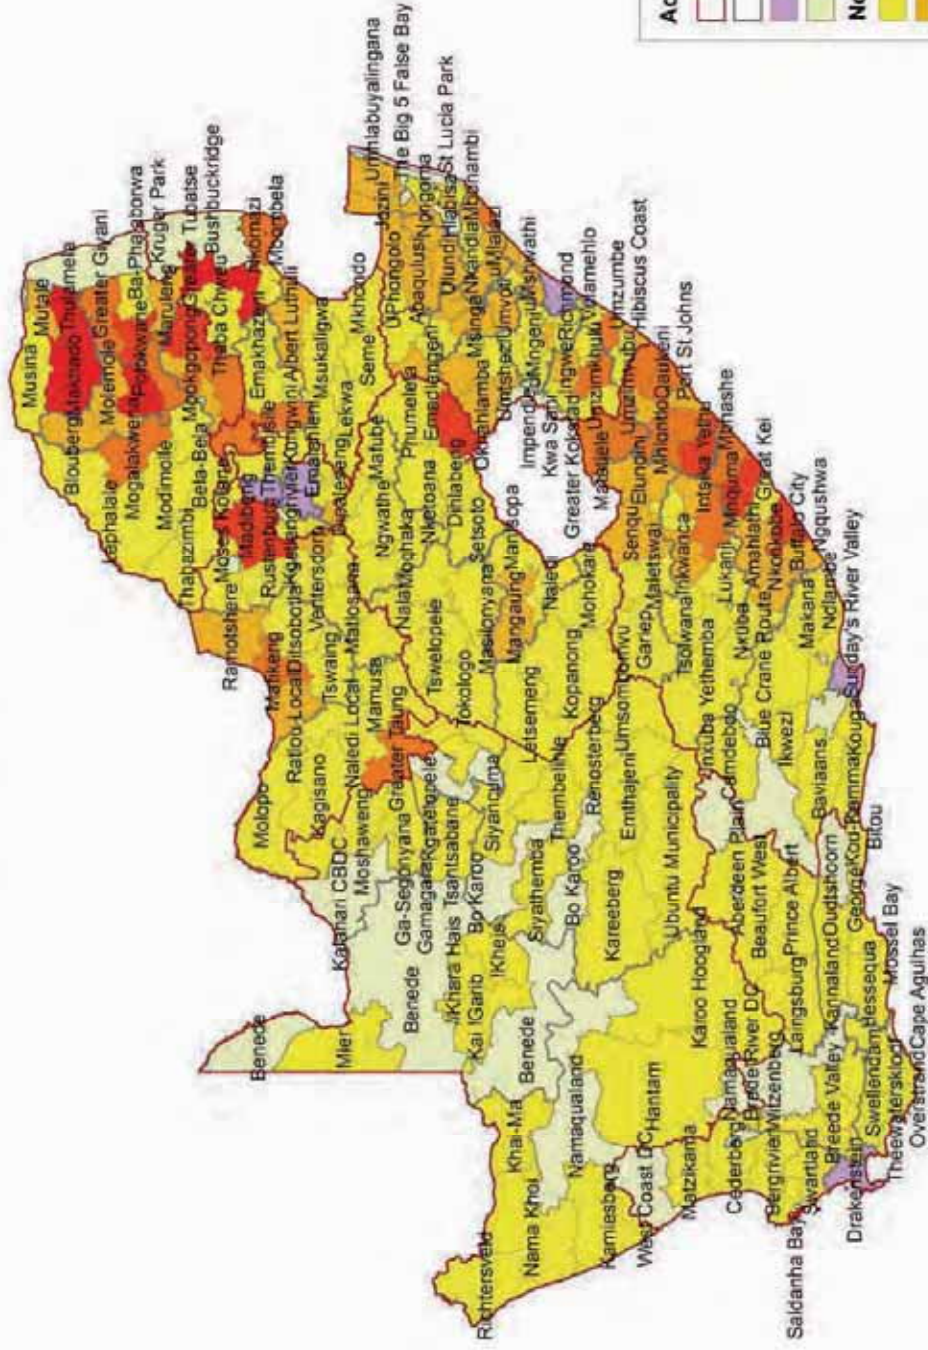

Local Municipalities

Percentage Share of National Backlog

- 0.1 - 0.0
- 0.1 - 0.5
- 0.6 - 1.0
- 1.1 - 1.5
- 1.6 - 2.0
- 2.1 - 2.5

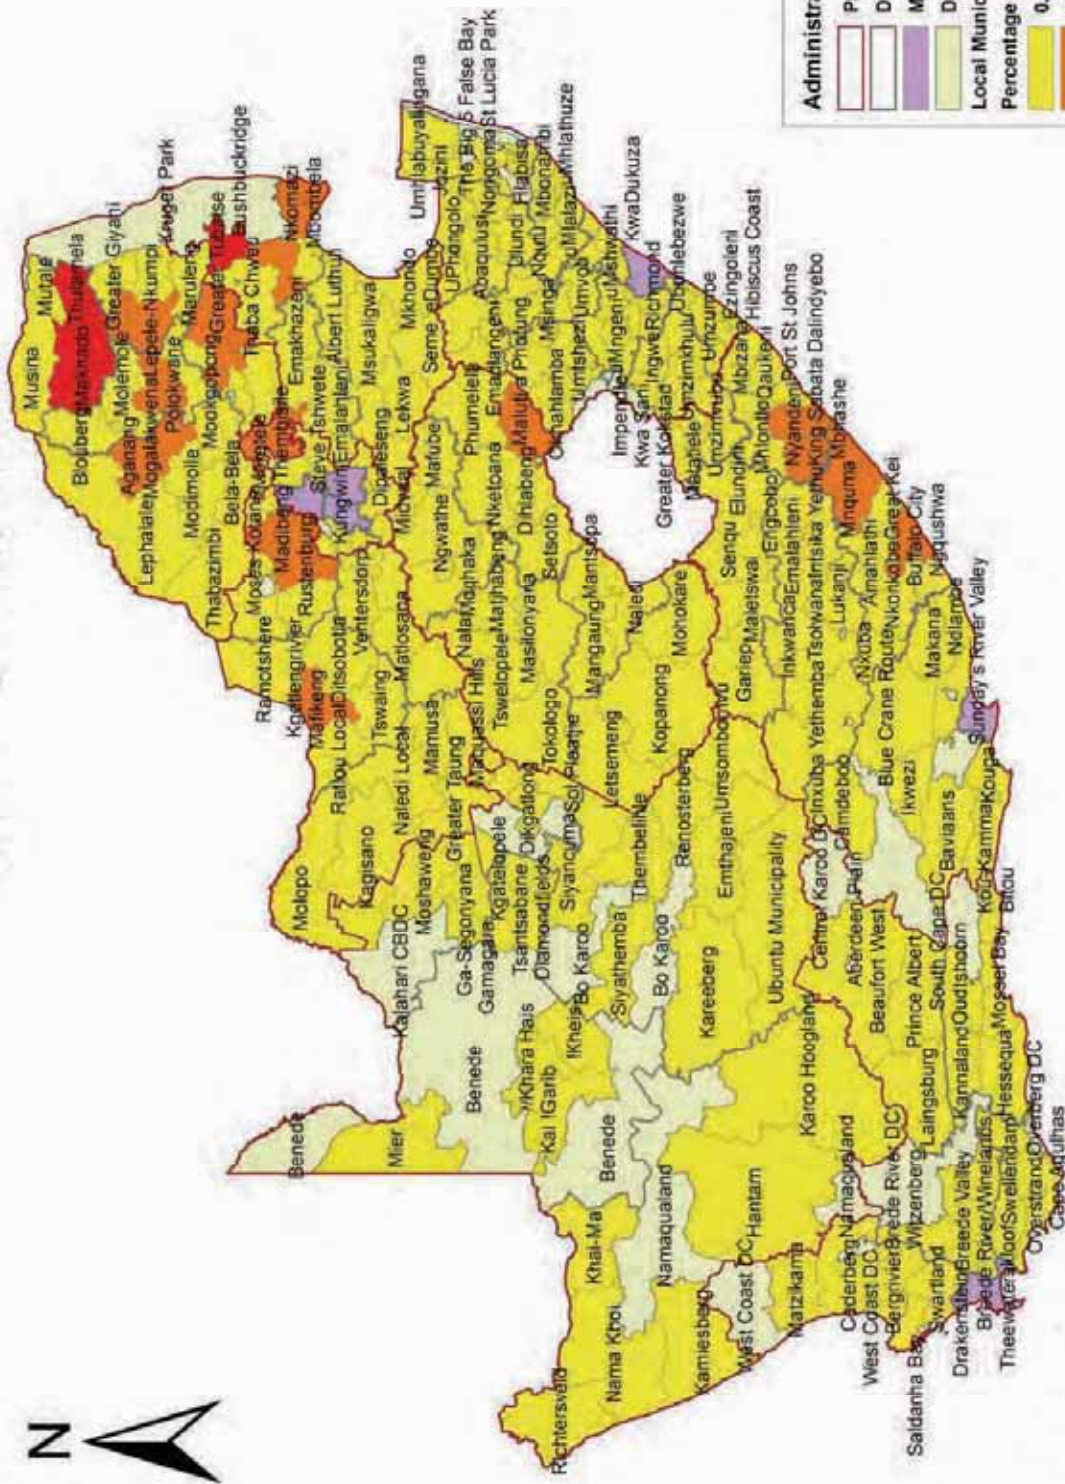

ANNEXURE V: SPATIAL DISTRIBUTION OF REFUSE REMOVAL
BACKLOGS (CS 2007)

Household Refuse Removal Backlogs Per Municipality Community - Survey 2007

ANNEXURE W: MUNICIPAL SHARE OF THE NATIONAL REFUSE
BACKLOGS (CS 2007)

Municipalities Share of the National Refuse Removal Backlog Community Survey 2007

Administrative Boundaries

- Provinces
- District Municipalities
- Metropolitan Municipalities
- District Management Areas
- Local Municipalities

Percentage Share of National Backlog

- 0.0 - 1.0
- 1.1 - 2.0
- 2.1 - 3.0

ANNEXURE X: SPATIAL DISTRIBUTION OF HOUSEHOLDS SERVED
WITH FREE BASIC ENERGY
(MUNICIPAL SOURCE 2008)
