## FOREWORD

It is indeed a delightful moment for me to release this Technical Report on the results of the 2012 National Senior Certificate examination. The National Senior Certificate is in its fifth year of implementation and I can attest to the stability and general improvement in the educational quality over the last five years. A higher level of teacher confidence coupled with a larger range of resource material and support programmes has contributed to the improved level of learner performance.

The achievement of a pass rate of 73.9% is indeed a significant achievement and the Class of 2012 needs to be commended for this achievement. The improvements in the provincial pass rates confirms that *Action Plan to 2014, Towards Schooling 2025*, is beginning to take root and as a Department we are firmly on an upward swing. Twenty nine thousand (29 000) more learners attained a National Senior Certificate in 2012 and now have access to the world of work or higher education institutions. The percentage of Grade 12 learners who qualified for Bachelor's studies increased from 20.1% in 2008 to 26.6% in 2012. There was an improvement in eight subjects at the 30% pass requirement and in six subjects at the 40% achievement requirement.

The improvement on the results of the 2012 NSC examinations is a culmination of a number of sustained systemic interventions aimed at strengthening and improving performance at all levels of the system. The intervention strategies of 2012 were in the main, driven by the strategic priorities of the DBE which encompass the Curriculum and Assessment Policy Statement (CAPS), Annual National Assessment (ANA), Workbooks and Infrastructure in one consolidated approach. The National Strategy for Learner Attainment (NSLA) embraced these four key strategic priorities in the design and implementation of the 2012 intervention strategies.

Informed by the 2011 NSC examination results, the findings in the 2011 NSC marking process and the 2011 National Diagnostic Report on Learner performance in the NSC examinations, PEDs developed support plans targeting the underperforming schools as well as identified areas of weaknesses in teaching, learning and assessment. Teacher support, the development of resources, content coverage, supplementary tuition, and assessment interventions are just a few of the strategies that were employed across all PEDs.

For 2013 and beyond, as a Department we will focus on those areas that we are still grappling with in terms of subject improvement and much of our efforts will be vested in enhancing our teacher development programme, together with learning support material. I am encouraged by the strong collaboration between the national and provincial education departments. This will augur well for the galvanising of our efforts to quality education for all.

I want to take this opportunity to thank parents, teachers and principals as well as members of communities for their support in improving the quality of education at all our schools. In spite of our improvements, we have not reached our goal of ensuring that all learners have a fair chance to succeed and to take up their rightful place in society.

My heartfelt congratulations to the Class of 2012 on their achievements in the National Senior Certificate examination! We will continue to work tirelessly and persistently to ensure that all learners, irrespective of their socio-economic background, attain high quality results. To those of you that have not done so well, do not lose heart – there are various options that are still available to you.

A handwritten signature in black ink, appearing to read 'Am Motshekga'. The signature is fluid and cursive.

**MRS AM MOTSHEKGA, MP**

**MINISTER OF BASIC EDUCATION**

**2 JANUARY 2013**

## 1. Introduction

A society's most valuable resource is its people, and education and training is the process by which society invests in the development of its people. This is because successful modern economies and societies require citizens with a strong foundation of general education, and the desire and ability to continue to learn. The National Senior Certificate examination is the culmination of twelve years of teaching and learning. Therefore, this examination is an important indicator of the extent to which the basic education system, is inculcating and developing the skills, knowledge and values in the young people of this country to take up their place in modern economies and societies.

The National Curriculum Statement: Grades R – 12, encapsulates the knowledge, skills and values that must be attained by all learners in the education system over the twelve years of schooling and through the ongoing assessment at the school level and the external examinations, the acquisition of these knowledge, skills and values, are evaluated.

2012 was the fifth year in which the National Senior Certificate (NSC) examination was administered across the country. This is a reasonable period to reflect on the achievements over the last five years, and also highlight the challenges that confront the system in attaining its world class status. It is encouraging to note that the Public Examinations have attained a high level of stability and in many respects have entrenched their practices across all provinces.

This report is one of four reports released by the Minister of Basic Education that seeks to capture the performance of the five hundred and eleven thousand, one hundred and fifty two (511 152) candidates that wrote the National Senior Certificate examination after twelve years of schooling. This report will focus on performance at the national, provincial and District level and will review the performance of the schooling system in terms of poverty indicators referred to as quintile scores. In the other two reports, the performance of the individual schools will be reflected in terms of the overall school performance and in terms of the performance in specific subjects. In the last report, the learner performance in selected subjects is analysed from a diagnostic perspective, with a view to highlighting areas of weakness and proposing remedial measures in the teaching of these subjects.

## 2. The National Senior Certificate Examination and Action Plan to 2014

The Annual National Assessment (ANA) and the National Senior Certificate examination are at the heart of the Education Sector Plan, *Action Plan to 2014: Towards the Realisation of Schooling 2025*. The key thrust and long-term focus of the Sector Plan, hereafter referred to as the *Action Plan*, is to improve the quality of basic education. The Action Plan outlines clear and measurable outcomes that the Sector has identified within the priorities of Government. In particular, the improvement of the quality of basic education has been identified as the top priority of Government on which the Department of Basic Education (DBE) has to deliver. Within this context, ANA and the NSC examinations are critical measures for monitoring progress in achieving set targets in terms of learner achievement.

Over the last few years, the NSC examination was the only reliable source of data on the performance of the system at the terminal point in the schooling system. Therefore, the *Action Plan* has introduced ANA as a testing programme that requires all schools in the country to conduct the same grade-specific Language and Mathematics tests for Grades 1 to 6 and Grade 9. The choice of subjects to prioritise for monitoring has been informed by the worldwide recognition of Literacy and Numeracy as the key foundational skills that predispose learners to effective learning in all fields of knowledge.

In terms of the *Action Plan*, the following three key targets are directly measured through the performance in the National Senior Certificate:

- (a) Increase the number of Grade 12 learners who become eligible for a Bachelor's Programme at a university;
- (b) Increase the number of Grade 12 learners who pass Mathematics; and
- (c) Increase the number of Grade 12 learners who pass Physical Science.

Whilst assessment and examinations by themselves cannot improve learning, they provides important evidence to inform planning and development of appropriate interventions for improvement at all levels, from national, through provinces and Districts, to individual schools.

### 3. The Importance of the National Senior Certificate (NSC) in the South African education system

The National Senior Certificate is the qualification that is attained after having satisfied the requirements contained in the National Curriculum Statement. The NSC is a three year qualification covering Grades 10, 11 and 12. The NSC is the apex of the twelve years of schooling, and the teaching and learning of the preceding twelve years is embodied in this qualification. Therefore, in understanding the importance of the NSC in the South African education system, it is imperative to first sketch the South African context.

#### 3.1 The South African Context

South Africa is in its eighteenth year of the democratic dispensation and shrugging off the remnants of an apartheid education system fragmented along racial and ethnic lines, and driven by unequal access to education and training, is indeed proving to be a long drawn out process – longer than expected.

The South African Education system has undergone major policy changes following the first democratic elections. These policy changes can be categorised into three broad phases in the policy cycle, namely: policy formulation, followed by a concentrated effort at implementation, and the third and current phase of policy being re-formulated or revised to address problems identified during implementation. Despite these important policy changes and significant national investments in education, educational outcomes are still unequal across schools. Also, inspite of the impressive progress in education legislation, policy development, curriculum reform and implementation of new ways in delivering education, the challenges remain in student outcomes and the relevance labour market.

The South African education system is a complex one. Although the legislative framework is comparable to the best in developed countries, the translation of these policies into effective practice remains a major challenge given the contextual challenges.

#### 3.2 The South African Education System and the central role played by the National Senior Certificate

The Department of Basic Education has been engaged in a curriculum transformation process, which began in 2002 in the General and Further Education and Training band, and in 2006, in the Further Education and Training band (FET). The new qualification that was issued at the end of Grade 12 in 2008 replaced the Senior Certificate and is referred to as the National Senior Certificate (NSC). The new curriculum seeks to address the holistic development of the learner, and ensures that learners are better prepared for higher education, the world of work and better citizenry. The assessment regime comprises of external examinations and School Based Assessment (SBA). The external examinations constitute 75% of the final assessment, and SBA or CASS (continuous assessment) or internal assessment will constitute the remaining 25%. This is in keeping with the arrangement of the Senior Certificate, except that the internal assessment requirement applies to full-time, part-time and private candidates. The other addition is Life Orientation (LO), where the internal assessment component will be 100% (DoE, 2005). The difference with regard to the NSC will also lie in the structure and form of the internal assessment.

The primary purpose of the National Senior Certificate is to:

- (a) equip learners with knowledge, skills, values and attitudes that will enable learners to participate meaningfully in society;
- (b) provide access to higher education;
- (c) facilitate the transition of learners from education institutions to the workplace; and
- (d) provide employers with a sufficient profile of a learner's competencies.

The National Senior Certificate qualification, examined for the first time in 2008, is underpinned by the National Curriculum Statement Grades R-12. It is based on the following principles:

- (a) Social transformation: ensuring that the educational imbalances of the past are redressed, and that equal educational opportunities are provided for all sections of the population;
- (b) Active and critical learning: encouraging an active and critical approach to learning, rather than rote and uncritical learning of given truths;
- (c) High knowledge and high skills: the minimum standards of knowledge and skills to be achieved at each grade are specified and set high, as achievable standards in all subjects;
- (d) Progression: content and context of each grade shows progression from simple to complex;
- (e) Human rights, inclusivity, environmental and social justice: infusing the principles and practices of social and environmental justice and human rights as defined in the Constitution of the Republic of South Africa. The National Curriculum Statement Grades R – 12 is sensitive to issues of diversity such as poverty, inequality, race, gender, language, age, disability and other factors;
- (f) Valuing indigenous knowledge systems: acknowledging the rich history and heritage of this country as important contributors to nurturing the values contained in the Constitution; and
- (g) Credibility, quality and efficiency: providing an education that is comparable in quality, breadth and depth to those of other countries.

### 3.3 The South African Examination System

The South African examination system has, since 1994, developed from a disparate examination system administered by the nineteen different education departments to a national examination conducted under the banner of the National Department of Education (DoE), in collaboration with the nine provincial examining authorities. Question papers were set by the nine provincial education departments and quality assured by Umalusi and the previous South African Certification Council (SAFCERT). The administration of the examination, the marking and the subsequent resulting was the responsibility of the Provincial Education Departments (PEDs). The DoE was responsible for policy development relating to examinations and assessment and for the monitoring of policy implementation.

In 2000, the Department of Education took on the responsibility of setting national question papers in five of the key subjects which was later increased to six. This initiative was introduced to set a common national standard in these subjects. In 2008, with the introduction of the National Senior Certificate (NSC), all question papers were set by the DBE and externally moderated by Umalusi. This ensured that a common standard was implemented across all subjects. PEDs continued with the management of the examination administration and the marking process, while the DBE managed the centralized resulting of all candidates on the Integrated Examination Computer System (IECS).

The current examination system is integrated to a large extent and national policy is implemented across all PEDs. However, there are aspects of the examination system that are differently implemented across PEDs and this is the area that warrants greater attention in 2013 and thereafter, so that a fully national system can be actualised.

Within the South African examination system there are three critical role-players and these are the Department of Basic Education, the Provincial Education Departments and the Quality Assurance Council, Umalusi.

#### (a) Provincial Education Departments

Provincial Education Departments are responsible for the administration of the examination process and this includes printing and distribution of question papers to examination centres. PEDs also take responsibility for the marking process and capturing of the marks on the Integrated Examination Computer System (IECS).

**(b) The Department of Basic Education**

The Department of Basic Education (DBE) is responsible for the drafting of all policy relating to education, and this policy must then be approved by the Minister of Education. In addition to policy development, the DBE must ensure policy implementation and policy compliance. This alludes to a support, monitoring and evaluation function.

**(c) Umalusi, the Council for Quality Assurance in General and Further Education and Training**

The Council for Quality Assurance in General and Further Education Training has been established under the General and Further Education and Training Quality Assurance Act (Act No 58 of 2001), to “ensure that continuous enhancement of quality is achieved in the delivery and outcomes of the General and Further Education and Training sectors of the national education and training system”.

The Council's domain of responsibility lies in ensuring that the education being provided to the nation in these sectors is purposeful and, more importantly, of quality.

The Council's quality assurance functions focus on:

- (i) The quality assurance of learner achievements;
- (ii) The quality assurance of qualifications and learning programmes;
- (iii) Accreditation of institutions; and
- (iv) Certification.

Umalusi as the quality assurance body has the responsibility of ensuring consistency of standards from year to year within each assessment body, and consistency of standards across assessment authorities. In view of this, assessment authorities must comply with the quality assurance body's requirements regarding the external moderation of question papers and scripts, as well as the different components of School Based Assessment.

### 3.4 Examination Structures

The South African examination system, given its size and magnitude, is dependent on strong co-ordination and co-operative relationships across the system. This is particularly essential in the case of the DBE and PEDs and other key examination and assessment stakeholders. The following are the key organisational structures that give effect to the effective examination administration:

**(a) National Examinations and Assessment Committee (NEAC)**

The National Examinations and Assessment Committee (NEAC) is a sub-committee of the Heads of Department Committee (HEDCOM) to advise HEDCOM on all matters relating to examinations and assessment. NEAC is representative of the various stakeholders/role players in examinations and assessment such as Provincial Heads of Examinations from both public and private examining bodies. The private organisations and examining bodies represented are the National Association of Independent Schools (NAISA) and the Independent Examination Board (IEB) respectively. The other role-players, [Higher Education South Africa (HESA), Umalusi, South African Qualifications Authority (SAQA), Independent College Group (ICG) and the Teacher Unions] have made significant contributions in establishing credibility for and integrity in the public examinations in the Republic of South Africa.

**(b) Structures established for dealing with irregularities**

There are four important structures established with respect to the different tiers of governance to manage the examination irregularities. These are the: National Examinations Irregularities Committee (NEIC), Provincial Examination Irregularities Committee (PEIC), District Assessment Irregularities Committee (DAIC) and the School Assessment Irregularities Committee (SAIC). These committees are established in terms of the *Regulations on the Conduct, Administration and Management of the National Senior Certificate*.

The National Examination Irregularities Committee (NEIC) comprises of two (2) representatives from the Department of Basic Education (DBE), one (1) official from each of the Provincial Educational Departments (PEDs), and one (1) representative each from Higher Education South Africa (HESA), South African Qualification Authority (SAQA), Umalusi and from each of the recognised Teacher Unions, who serve as observers.

The NEIC co-ordinates the irregularities identified during the conduct of Examinations, and reports to the Minister on all examination irregularities detected during the conduct of the NSC examinations in that year. Based on these irregularities, the Umalusi Council establishes whether the irregularities reported are of the nature that would have compromised the credibility and integrity of the examinations. Thereafter, Umalusi Council approves the results.

The Provincial Examinations Irregularities Committee (PEIC) is responsible for the handling of assessment irregularities at a provincial level. The PEIC may utilise the services of other officials from the PED to conduct investigations and hearings. These officials operate under the jurisdiction of the PEIC and report to the PEIC. After every examination, the PEIC is required to convene its meeting and deal with irregularities before it presents the report on all irregularities to the NEIC for final ratification.

The District Assessment Irregularities Committee (DAIC) is established by the Head of Department and takes responsibility for the handling of irregularities relating to the internal assessment conducted at the school level. This is done to ensure a consistent approach in the handling of irregularities across all schools in the District. The DAIC becomes involved in the handling of examination related irregularities, only on instruction of the PEIC or the Head of Examination in the province.

The School Assessment Irregularities Committee (SAIC) is effectively established by the school principal, subject to the approval of the Head of Department or an official delegated by the Head of Department. This committee ensures the credibility of internal assessment and examinations conducted at school, by co-ordinating the handling of irregularities and ensuring a consistent approach in the handling of irregularities.

## 4. The National Senior Certificate: 5 Year History

The National Senior Certificate (NSC) was introduced in 2008 in response to the shortcomings and deficiencies manifested by the Senior Certificate. Intense preparation which commenced in 2006 was undertaken to prepare the education system for the new curriculum leading to the new qualification.

### 4.1 Transition from Senior Certificate to National Senior Certificate

The National Senior Certificate was phased in over a three year period, commencing with Grade 8 in 2006. The new curriculum was designed to be responsive to the social, cultural and economic needs of the South African citizenry. The National Curriculum Statement is based on the critical outcomes, which drive learning and assessment practices. These outcomes are drawn directly from the Constitution of the country.

The NSC requires that all learners from Grades 10 to 12 do seven subjects. Two of these subjects must be South African Languages. In addition to the two languages, all learners must offer either Mathematics or Mathematical Literacy and all learners must offer Life Orientation. The compulsory requirement of Mathematics or Mathematical Literacy aims to ensure that all learners are prepared for life and work in an increasingly technological, numerical and information driven world. Life Orientation aims at building civic participation and understanding. In addition to these four compulsory subjects, learners must choose three subjects from a list of approved subjects.

The National Senior Certificate qualification is also the gateway for further study at higher education institutions. For this purpose, Higher Education South Africa (HESA) has developed minimum admission requirements based on the National Senior Certificate for admission to higher education institutions, namely studies leading to a Higher Certificate, Diploma or Bachelor's Degree.

The following criteria are set for entry into Higher Certificate, Diploma and Degree study:

Qualification	Minimum entry requirement
<b>Higher Certificate</b>	Pass NSC with: At least rating of 2 for the Language of Learning and Teaching (LOLT) of the higher education institution.
<b>Diploma</b>	Pass NSC with: <ul style="list-style-type: none"> <li>• An achievement rating of 3 (40–49%) or better in four subjects.</li> <li>• At least rating of 2 for the Language of Learning and Teaching (LOLT) of the higher education institution.</li> </ul>
<b>Bachelor Degree</b>	Pass NSC with: <ul style="list-style-type: none"> <li>• An achievement rating of 4 (50–59%) or better in four subjects from the designated list.</li> <li>• At least rating of 2 for the Language of Learning and Teaching (LOLT) of the higher education institution.</li> </ul>

The pass requirements for the National Senior Certificate are equivalent, if not higher than the old Senior Certificate (SC). The higher standards of the National Senior Certificate (NSC) can be attested to by the following:

- The National Senior Certificate (NSC) requires a candidate to offer seven subjects, while the old Senior Certificate (SC) required six subjects.
- To obtain a Senior Certificate a candidate must pass five of the six subjects, two of which must be languages and only one of these languages must be passed at 40%. To obtain a pass in the other subjects a candidate could obtain a mark as low as 25% (lower grade pass). The 25% converted pass mark earned the candidate a SC provided the learner satisfied the aggregate requirement of 720. This implies that the candidate could perform extremely well in one or two subjects and obtain 25% in the remaining subjects, provided he/she makes the 720 aggregate requirements.
- To obtain a National Senior Certificate, a learner must pass three subjects at 40% and three subjects at 30%, one of which must be the home language, passed at 40%. There is no aggregate requirement for the NSC, since the aggregate is made redundant by the specification that three subjects must be passed at 40% and three at 30%.
- To obtain admission to University study for Bachelor's, in terms of the SC, a candidate needed to pass four subjects at 40% and two at 33,3%. In the case of the National Senior Certificate, admission to Bachelor studies requires a pass in four subjects at 50% and the remaining subjects at 30%, provided the home language is passed at 40% and the language of learning and teaching (LoLT) at 30%.

Given the above, it is clear that admission to the Bachelor studies in terms of the NSC requires a pass at 50% in four subjects, which is higher than the SC, viz. 40%. Furthermore, the subjects to be passed at 50% are from a designated list determined by the University sector and not any of the NSC subjects.

- All subjects offered for the NSC are at one level which is equivalent to the previous Higher grade level. In the Senior Certificate, learners could offer a subject at higher grade or standard grade level and also obtain a converted pass on the standard grade (33,3%) or lower grade (25%).

## 4.2 Improvements made during the first 5 year cycle of the NSC

The implementation of the NSC has resulted in significant improvements to the teaching, learning and assessment and these can be summarised as follows:

- All learners that enrolled for the NSC qualification now offer some form of Mathematics, either pure Mathematics or Mathematical Literacy;
- With the inclusion of Life Orientation, as a compulsory subject, all learners now are exposed to moral, civic and physical education;

- (c) There has been a steady improvement in learner performance from 60.6% in 2009 to 70.2% in 2011;
- (d) A significant increase in the number of part time candidates, from 39 255 in 2009 to 120 484 in 2012, although school based assessment is a compulsory component of the qualification for part-time candidates;
- (e) Over the last five years, there has been the development of a sound legislative framework that regulates the administration of the examination across the nine provincial education departments, mandates the Department of Basic Education to set norms and standards and monitor the implementation of these standards;
- (f) The setting of national standards through the setting of national question papers for all subjects is done by the Department of Basic Education, which are written by all provincial education departments. This ensures that every learner in the country writes the same examination, and is therefore assessed against a common yardstick;
- (g) There is strong collaboration between the DBE and the nine Provincial Education Departments (PEDS), through the National Examination Assessment Committee (NEAC), which gives effect to the principle of co-operative governance, enshrined in the Constitution;
- (h) The establishment of a national and provincial moderation system of School Based Assessment (SBA), which includes Life Orientation, that has contributed to the improvement of the quality of the assessment, although there is still much work to be done in this area;
- (i) The establishment of the Quality Assurance Council, Umalusi, that replaced SAFCERT takes full and final responsibility for the quality assurance for the examinations and school based assessment. This allows Umalusi to issue a common National Certificate if it is satisfied that the examination and the assessment have complied with the national standard; and
- (j) The standard of question papers set has improved through the incorporation of the comments from the international benchmarking exercise, pre-test writing of question papers, a common language assessment framework for languages and extensive training of examiners.

### 4.3 Challenges experienced during the first 5 years of the NSC

Since the approval of the *National Curriculum Statement Grades 10-12* in 2005, the Department has been criticised for the apparently low promotion requirements of the National Senior Certificate qualification. The promotion requirements of a pass at 40% in three subjects and 30% in any three of the remaining four subjects were regarded as too low. Despite the Department's numerous attempts to defend it by comparing it with the promotion requirements of the previous qualification, namely the Senior Certificate, the critics are still not convinced.

There has also been concern about the larger number of candidates enrolling for Mathematical Literacy rather than Mathematics. The current ratio of Mathematics to Mathematical Literacy stands at 45: 55. However, it is the intention of the DBE to see more learners taking Mathematics. This situation is possibly accentuated by the gate keeping practice of school principals, who are desirous of better pass rates and therefore encourage learners to migrate to Mathematical Literacy.

The value of Life Orientation as an examinable subject in the school curriculum has been questioned. Given that the assessment is entirely school based, the performance of learners is exceptionally high and hence there are concerns about the reliability of this assessment. The higher education sector has, as a consequence, excluded Life Orientation from the designated list of subjects.

There is also concern about the competency of teachers to deal with certain content areas in the curriculum and the DBE is addressing this challenge through its intensive teacher development programme.

In response to the challenges relating to the standards of the NSC, the Minister is in the process of establishing a Ministerial committee that will do the following:

- (a) Establish from current research and other media reports the main criticisms against the NSC;
- (b) Conduct a comparative study of the promotion requirements of the NSC and other similar exit qualifications in a few countries that are of international repute;
- (c) Consult with the key recipients of the NSC in the South African academic, workplace and business environment and identify their concerns about the NSC and how these can be rectified in the short to medium term;
- (d) Evaluate the current nature of Mathematics and Mathematical Literacy and whether this is the best option for the South African schooling system in terms of preparing learners for the work place, higher education studies and personal citizenry; and
- (e) Evaluate the “value add” of Life Orientation as a subject that is designed to inculcate morals, values, physical education and career guidance to learners.

## 5. The Class of 2012

### 5.1 Characteristics of the Class of 2012

The cohort of learners exiting Grade 12 this year has affectionately been called South Africa’s “born frees”, since they were among the over 600 000 people born in the year of the first democratic and free elections. These are, therefore, the first fully fledged children of our democracy. This cohort of learners has experienced 12 years of schooling based on the new curriculum.

Having enrolled in Grade 1 in 2001, seven years after the democratic dispensation was installed, it implies that the class of 2012 has had 12 years of schooling under a democratic government, when education systems and processes were relatively well established. They also wrote the fifth nationally set NSC examinations, when the standard and quality of the examinations and system is said to be maturing and stabilizing.

Furthermore, the Class of 2012 had additional support in terms of the examination materials they had access to i.e. the exemplars, examination question papers from the NSC examinations and Supplementary examinations from the previous four examinations. This means that they had extensive supplementary materials for revision, which assisted them in adapting to the demands of the new curriculum, particularly with regard to assessment and examination, and educators were better prepared and more confident to teach the new curriculum.

The teaching and learning environments for Grade 12 learners, across schools, in eight provinces was stable this year. There was no political or social instability that could have spilled over into the school communities and disrupted teaching and learning. The exception is the Northern Cape, where teaching and learning was disrupted in the John Taolo Gaetsewe District due to service delivery protests, which resulted in the local communities preventing learners from attending school for four months. However, the swift action of the province ensured that the Grade 12 learners were adequately prepared for the examinations just like their counterparts in other provinces. Learners were re-located to a special camp where they received tuition in all their subjects and were finally accommodated at the camp to write the November examination.

### 5.2 Learner readiness to undertake the National Senior Certificate examinations

Improving learner performance is the fundamental objective of *Action Plan to 2014: Towards the Realisation of Schooling 2025* and has been the thrust of all interventions, undertaken by the DBE since 2010 which were built on in 2011 and continued through 2012. The strategic priority of the DBE which focuses on Curriculum and Assessment Policy Statements (C), Annual National Assessments (A), Workbooks and Infrastructure (WI) - i.e. CAWI, is a long term consolidated approach to enhance school and learner performance. The intervention strategies of 2012 were in the main, driven through CAWI and the National Strategy for Learner Attainment (NSLA). Therefore, to understand the issue of learner readiness for the National Senior Certificate, it has to be reviewed in the context of the *Action Plan 2014* and the holistic learner improvement plan of the DBE.

With regards to CAPS, the intention was to provide training to teachers in preparation for the implementation of the recent revisions made to the National Curriculum Statement. Principals and School Management Teams (SMTs) monitored the implementation of CAPS for teacher development and planning. Districts also monitored the implementation in sample schools. Curriculum coverage was also monitored, and appropriate resources were made available by the DBE to enhance teaching and learning.

The implementation of the Annual National Assessment (ANA) and the focus on the early years of schooling will collectively ensure that the interventions target the lower levels. This will allow for early detection of learner shortcomings which will then allow for these to be turned around well ahead of the Grade 12 examination. For the ANA rollout, Districts were expected to set targets and to ensure that the District and school performance targets were met. The DBE provided exemplars for schools to assist teachers and learners in their preparations for the ANA tests. School support plans were developed by Districts to also assist schools in their teaching and learning and preparation for the ANA. The ANA was successfully administered and some improvements have been noted in the Numeracy and Literacy levels in all Grades, except Grades 6 and 9.

Workbooks are core materials. These were produced for Grades 1 to 9 and distributed to schools to ensure that each learner had their own workbook. These workbooks were to be integrated in the teaching of CAPS and expected to provide additional resource for extra exercises for the learner and teacher. Parents could have access to their learners' workbooks and also support them at home.

Through the Accelerated Schools Infrastructure Delivery Initiative (ASIDI), the DBE was able to provide classrooms as appropriate learning spaces which are aligned to the pedagogical needs of the curriculum.

### 5.2.1 Intervention Strategies for 2012

Within the framework of the NSLA, each province developed its own Provincial Strategy for Learner Attainment (PSLA), which was integrated at the national level, as a comprehensive turnaround strategy covering Grade R to 12. Two key strategies, namely: the 3 Ts (Teachers, Text and Time), and focus on the utilisation of the Diagnostic Report by teachers and schools, were emphasised in 2012 in addition to other interventions. These key focus areas are seen as long term systemic programmes for the improvement of schools, teaching and learning, and subsequently learner performance.

#### (a) Teachers, Text and Time

Provinces heeded Minister Motshekga's call to Districts in May 2012 to ensure that Teachers, Text and Time were at the heart of all interventions which will drive the 2013 turnaround strategy envisioned in the NSLA.

Since teachers are essential for mediating learning in the classroom, so it was expected that every teacher would ensure full curriculum coverage in all Grades (10, 11 and 12), improve the quality and quantity of Assessment Tasks in all Grades and Practical Assessment Tasks (PATs) in all Grades. and Teachers were also expected to provide opportunities for more written work by learners and to provide regular feedback to learners' parents/guardians on learner performance. Teachers were to be held accountable for curriculum coverage and for the quality of teaching and assessment tasks given to learners.

The reference to texts encompasses the provision of quality resources that provide learners with a consolidation of content and assists teachers in developing activities to support learning. The focus in 2012 was to improve the provision and optimal utilization of textbooks and workbooks. To ensure that textbooks provided were optimally utilised, PEDs were expected to monitor the delivery and utilization of the textbooks.

Time on Task is one of the underlying objectives of the NSLAS; hence protecting time for teaching and learning, and increased efforts on Time on Task was also a key focus area in 2012. Schools were monitored in the effective utilization of instructional time and reports in this regard were submitted to the DBE.

**(b) Diagnostic report on learner performance**

In January 2012, the DBE released a Diagnostic Report based on a detailed per question analysis of candidates' responses to questions in 11 key subjects. Common errors and misconceptions, as well as content areas that proved to be problematic were identified. The report made suggestions which the Grade 12 subject teachers and subject advisors could apply to remediate the respective subject content and methodology in 2012. PEDs utilised this report in planning their intervention programmes to focus on the areas of weaknesses highlighted in the report. As a result, a number of the Teacher and Learner Support Programmes focused on specific content areas in the 11 key subjects.

**(c) Improving learner and teacher access to materials (Textbooks and Study Guides)**

The DBE delivered over **4 million supplementary textbooks** which were developed as part of the Siyavula Project in partnership with the Shuttleworth Foundation. These resources were distributed by the end of February 2012 to all Grades 10 to 12 learners. A total of 302 660 Mathematics and 230 715 Physical Science textbooks were distributed to schools in this programme, over and above the standard provision of textbooks in these subjects.

In a targeted response to the areas of weaknesses identified in the 2011 National Diagnostic report, the Mind the Gap series was developed in 4 key subjects, namely: Economics, Life Sciences, Accounting and Geography for Grade 12. These books were distributed to Eastern Cape, Limpopo and Northern Cape provinces as shown on the accompanying table.

**Table 1: Distribution of *Mind the Gap* Series**

Province	Economics	Life Sciences	Accounting	Geography
Limpopo	19 150	40 219	15 246	33 232
Eastern Cape	18 393	37 396	16 916	24 987
Northern Cape	100	405	150	290

**(d) Development of Practical Assessment Tasks (PATs)**

The DBE developed the Practical Assessment Tasks (PATs) for the **16** subjects in the National Curriculum Statements (NCS), which contain a practical component. These tasks were moderated by the Examination panel as well as Umalusi moderators of the specific subjects. These were distributed to provinces and administered by all schools offering these subjects. The DBE had developed these tasks to ensure that the quality and standards are consistent across the system.

**(e) Mathematics, Science and Technology (MST)**

The DBE has prioritised Mathematics, Science and Information Technology skills, in line with the national human resource development priorities. The **500** Dinaledi schools continue to provide a locus for focused support and strengthening of interventions in MST. In pursuance of strengthening Maths and Science learning, the Dinaledi schools' programme received a conditional grant of **R99.7 million** for 2012/13. Provinces reported utilising these funds to purchase Maths and Science equipment, develop LTSM for Maths and Science, and to train Mathematics and Science teachers on subject content knowledge.

It is also noteworthy to state that the Telkom Masters Services Agreement was signed on 27 March 2012 for the Phase 1 implementation of the Connectivity Plan. This initiative will provide internet connectivity to 1 650 schools for a period of 3 years. The agreement will also see access to Britannica by all selected schools.

**(f) Teacher Development Programme Partnerships**

Teacher Development Programmes were co-ordinated with Provincial Departments in targeted priority areas with **184 207** teachers, with the clear goal of improving professionalism, teaching skills and subject knowledge of teachers. In addition, a collaborative programme with teacher unions was initiated and an agreement with the PEDs of KwaZulu-Natal and Mpumalanga was reached for the orientation of teachers. A reported **21 306** teachers participated in CAPS orientation as part of this collaboration programme, in these two provinces. The provision of training programmes to teachers is the function of the PEDs, and the DBE plays a co-ordinating role. Orientation for the introduction of CAPS to **90 000** Foundation Phase and **60 000** Grade 10 teachers was co-ordinated in conjunction with PEDs across all PEDs.

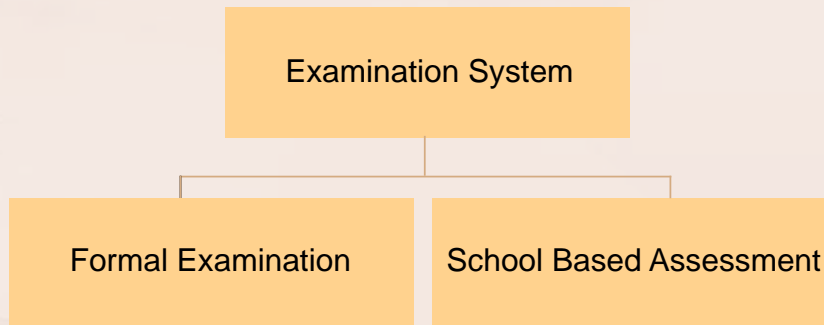

**(g) Syllabus completion:**

Non-completion of the syllabi was identified as a contributory factor to the declining pass rates in a number of subjects in each of the provinces. To monitor content coverage, and to ensure syllabi completion in good time, the DBE introduced a monitoring tool for all schools to complete and submit to the District office. This integrated tool submitted on a monthly basis, provided a report on curriculum and assessment tasks achieved or not. Since its introduction in 2011, a gradual improvement in syllabi coverage and syllabi completion in many schools has been noted. PEDs also developed Pace setters and teacher work schedules to assist teachers in this regard. Innovations to ensure syllabus completion came in the form of the supplementary tuition programmes which were implemented in a variety of modes that suited the needs of respective schools, Districts and provinces. As a result, most schools reported that they had achieved **100%** coverage of the Grade 12 content by the end of August, allowing for adequate time for revision by learners.

## 6. The South African Public Examination System

The public exam system is based on the National Senior Certificate (NSC) that reflects the total accumulated competencies acquired by learners exiting the schooling system. The qualification consists of an examination component and a School Based Assessment (SBA) component.

**Figure 1: Public examinations system**

The final promotion mark for the National Senior Certificate comprises **75%** of the examination mark and **25%** of the SBA mark.

### 6.1 The Magnitude and Size of the National Senior Certificate Examination

A total of **526 590** fulltime candidates enrolled for the 2012 National Senior Certificate examination and 510 173 fulltime candidates finally wrote the examination.

The table below indicates the number of fulltime and part time candidates that enrolled and wrote the 2012 NSC examination.

**Table 2: The number of full time and part time candidates who enrolled and wrote the 2012 National Senior Certificate per province**

Province	Number of Candidates enrolled					
	2012					
	Number enrolled		Number wrote		Difference	
					enrolled-wrote	
	Full time	Part time	Full time	Part time	Full time	Part time
Eastern Cape	69 427	18 719	63 989	8 898	5 438	9 821

The formal examination is set by the DBE and administered by the PEDs. The 2012 National Senior Certificate Examination (NSC) was administered across 6623 examination centres

## 6.2 Formal Examinations

The formal examination refers to the external examination conducted under controlled conditions. The examination cycle comprises a series of activities undertaken to ensure that the examination is conducted under credible conditions and that candidates are ultimately issued with a NSC certificate. The examination cycle extends over a period of eighteen months (18). The process begins with registration of examination centres as well as candidates and ends with candidates being certified, and exiting the system to seek admission to Higher Education or the world of work.

The key processes in the examination cycle are, among others: development of test items or setting of question papers; administration and conduct of examinations; marking of candidate's answer books or answer scripts; release of results; and certification of candidates.

The figure that follows indicates the key processes in the examination cycle.

**Figure 2: Processes in examination cycle**

### 6.2.1 Test Development

A test is an instrument designed to measure knowledge, skills, values or attitudes as stipulated in the curriculum in order to establish whether the intended aims or outcomes of the curriculum have been achieved by a learner, and the required competencies have been acquired. Tests are therefore a guarantee or assurance that those awarded qualifications have met the required standards for the qualification.

Test development involves the process of creating items that are fair, valid and reliable and compiling the items into a question paper or test instrument based on a pre-determined assessment framework, or test specification. There is no shortcut to this process, and hence a number of steps are involved. The test development process for the NSC question papers is outlined in section 5.2.1(b) of this report.

#### (a) Evolution of national question papers

The standard of the question papers has evolved over the past 5 years of the NSC. In 2001, the Department of Education (DoE) set question papers in five critical subjects, centrally. These included: Mathematics, Physical Science, Biology, Accounting and English Second Language. In 2007, the number of question papers set nationally was increased to cover the 11 key subjects with the highest enrolments. Geography, Agricultural Science, History, Economics, Business studies, Religion Studies were added to the nationally set subjects. In the 2008 examination, 216 national question papers were set and administered nationally across all nine provinces and for the first time, all candidates were exposed to a common standard in all subjects in the NSC examination. Since 2009, a total of 260 nationally set question papers are administered annually in the November and March examinations.

Moving from provincial to national question papers has not only contributed to an improvement in the standard of question papers but also in establishing a national standard in the country, which has been found to be comparable to international standards, in the international benchmarking exercises.

Since 2008, the DBE has continued to employ new strategies to improve on the standard of the question papers. The attainment of the current standard of the NSC question papers can be attributed to the specific mechanisms of standard setting in question paper development which has been employed over the past five years. These include, *inter alia*, the question papers are set by a panel of examiners consisting of 3-5 members representative of as many provinces as possible, and examiners' subject expertise is thoroughly scrutinized prior to appointment.

**(b) Process of Test Development**

The key success indicators reflective of the test development process are as follows:

**Key success indicators**

- High quality question papers are set and moderated.
- Question papers are accurately printed.
- Question papers are distributed on time to all schools and candidates and strict security measures adhered to in the distribution process.

The key steps in the test development process are outlined in the figure below:

**Figure 3: Test Development Process**

Test Development

**(i) Appointment of Examiners**

The first step of the test development cycle is the appointment of examiners and moderators in the identified subjects. A rigorous process was employed in the appointment of examiners and internal moderators. The criteria for the appointment of examiners as stipulated in the *Personnel Administrative measures (PAM)*, include, at least a three-year post-matriculation qualification which must include the subject concerned at second or third-year level, extensive experience as an educator in the particular subject or a related area and at least two years teaching or other curriculum-related experience within the last 5 years at the appropriate level. In addition, other criteria such as experience in the setting of provincial common tests and examinations and experience in the marking of national examinations was considered.

Potential examiners were short listed on the basis of the criteria stipulated in the *PAM*. The short listed examiners were subjected to a competency test based on knowledge of the content, knowledge and expertise in assessment and development of items as well as computer literacy. The successful candidates were subsequently interviewed by a panel of curriculum and assessment specialists before a final selection was made. The successful examiners are considered to be national experts in their subjects, reputed for their expertise and contribution to their field. The selected examiners were constituted into panels of examiners comprising 3 examiners, a chief examiner and one internal moderator based on their expertise and experience. The panel of examiners was trained prior to the commencement of the setting process.

**(ii) Setting of Question Papers**

All question papers for the November 2012 NSC examinations, were set by a national panel of examiners consisting of between 3 - 5 examiners per panel and one internal moderator. A total of two hundred and forty three (243) examiners and 49 internal moderators consisting of the top teachers, subject advisors and university lecturers were involved in the setting and moderation of the Grade 12 November 2012/March 2013 National Senior Certificate examination question papers.

Prior to the commencement of the setting, each panel of examiners carefully studied and considered comments from teachers, chief markers, reports from the 2011 Marking Guideline Discussions, Internal Moderators' Reports from the 2011 marking, External Moderators Reports from the 2011 setting and moderation processes as well as reports from international benchmarking of the 2012 question papers.

The setting and moderation of question papers for the November 2012/March 2013 examinations commenced in August 2011 and was concluded in July 2012, when they were officially handed over to PEDs for printing. All question papers were set within the secure environment of the Department of Basic Education. The question papers for the November 2012 and March 2013 were set concurrently, to ensure a comparable standard between the November and March examinations, given that these two examinations are regarded as one sitting.

A total of **262** question papers were set by the DBE for the November 2012 and March 2013 NSC examination. In addition, based on a contractual arrangement with the Independent Examination Board (IEB), **67** question papers for all Non Official Languages were set by the IEB. In order to cater for learners with special needs, **57** question papers were adapted for Braille and **92** question papers were adapted for deaf learners. The papers for the blind were printed in both the Unified British font, as well as in Unicode so that each candidate received their Braille papers printed in the specific font he/she has been taught. Special examiners, who are mainly subject specialists with proven experience in education for the deaf were utilised to adapt the papers for the deaf.

The setting process commenced with the development of a Test Specification (Analysis Grid), which shows the distribution of the subject content according to the topics, the weighting and the cognitive levels, the Learning Outcomes and Assessment Standards, and the Mark Allocation. This ensured that all aspects required in setting a balanced question paper are considered prior to the development of the items. The chief examiner is required to ensure that the question paper covers the Learning Outcomes, Assessment Standards and the Subject content as stipulated in the Subject Assessment Guidelines (SAG) and the Examination Guidelines of the subject, and also that the weightings and distribution of questions as set out on the test specification are adhered to.

Across all subjects, questions were carefully set to ensure that appropriate scaffolding is provided for each question and also the principle of moving from the simple to the more complex was applied in all question papers. A variety of types of questions assessing a variety of skills including critical thinking and problem solving skills were included in all the question papers.

The following improvements are noted in the approach utilised in the setting of the 2012 question papers:

- Training sessions were conducted for examiners and moderators specifically in the languages, focussing on aspects of 'Assessment of Visual Literacy' which has proven to be challenging for language examiners in all 11 Languages.
- To ensure comparability of standards across all language question papers, a common languages assessment framework was fully implemented for the first time in the setting of the November 2012/March 2013 Language examination question papers. The Assessment Framework specified the number of texts per subject, mark allocation, kinds of texts to be used and length of texts. This ensured uniformity in the format, types and levels of questions across the language question papers.
- The results of the intensive post test analysis conducted on the 2011 NSC question papers by Umalusi as well as other independent assessment experts were taken into consideration in the setting of the 2012 question papers.
- The findings from the international benchmarking conducted on 15 selected NSC 2010 question papers were incorporated into the 2012 question papers, where necessary.
- Pre-test writing of question papers was conducted in four of the key subjects, namely: Economics, Accounting, Physical Sciences and Mathematics, and the question papers were refined in light of the comments received.

**(iii) Internal moderation of question papers**

Internal moderation is done by an independent subject expert appointed by the DBE. Once the question paper and marking guidelines have been drafted, the drafts are submitted to the internal moderator together with the analysis grid or Test Specifications. The question paper, marking guidelines and analysis grids are then reviewed by the internal moderator, who evaluates the question paper utilising the Umalusi criteria for evaluation of question papers listed in 5.2.1 b (iv). The moderator then writes a set of comments on each of the set criteria highlighting the appropriateness of each individual question, the question paper as a whole, as well as on the suggested responses in the marking guideline. These comments are sent to the examining panel who then revise the question paper, the marking guidelines and the analysis grid in line with the comments of the internal moderator. Upon approval by the internal moderator the paper is then submitted to Umalusi, the external quality assurance council, for external moderation.

**(iv) External Moderation of Question Papers**

A total of eighty four (84) External Moderators from Umalusi verified, evaluated and approved all question papers for the November 2012 and March 2013 NSC examination concurrently to ensure comparable standards. The rigorous external moderation process contributed to ensuring that the question papers were of a high quality and appropriate standard for Grade 12 learners.

**Criteria for evaluation of question papers**

The DBE internal moderators and Umalusi external moderators utilised the following set of criteria developed by Umalusi, in their evaluation of the November 2012 and March 2013 question papers:

- (i) Adherence to Assessment Policies/Guideline Documents
- (ii) Content coverage
- (iii) Cognitive skills
- (iv) Language and bias
- (v) Predictability
- (vi) Marking memorandum/guideline
- (vii) Technical criteria
- (viii) Internal moderation
- (ix) Overall impression of the paper

According to the Internal and External Moderators' Reports the papers set were of appropriate standard and covered the prescribed content. The cognitive levels of these question papers were appropriate and accommodated problem solving and critical thinking skills demanded by the curriculum.

**(v) Quality Assurance and Language simplification of question papers**

The final quality assurance of the 2012 NSC question papers was conducted at the DBE in collaboration with PEDs. The quality assurance process included editing, correlation, proofreading and quality control.

A three-tier editing process was followed. The first step involved editing which was done concurrently with language simplification, to ensure that the language is accessible, and that there is judicious correlation between Afrikaans and English versions of the question papers. Accuracy in language, format and translation as well as correct and consistent use of terminology was ensured. The layout and design of all the question papers were checked to ensure that they are learner friendly, consistent and uniform across all subjects. In addition, all accompanying diagram sheets and annexures were checked for clarity and legibility.

After the DBE editors completed editing and correlation, a second step was employed where a team of selected editors from different provinces were utilised to conduct another round of editing and proofreading of the question papers. Then finally, the external moderators and internal moderators also proofread the final print ready copies before they were handed over to PEDs. This multi step approach in the quality assurance of question papers ensured error-free question papers.

#### (vi) Pre-Test Writing

Pre-test writing of question papers was conducted in four of the key subjects, namely: Economics, Accounting, Physical Sciences and Mathematics. Independent, experienced subject experts were appointed to write the question papers under examination conditions. A full report on the length of the paper, time allocation, language accessibility, clarity of items was provided to the panel on the basis of which the question papers were further refined. This process has proven to be very valuable in improving the standard and quality of the question paper and reducing ambiguity in questions. The DBE intends to progressively increase the number of question papers pre-tested in subsequent examination cycles.

#### (c) Printing, Packing and distribution

Printing, packaging and distribution of question papers is done by Provincial Education Departments (PEDs). Question papers for the mainstream learners were handed over to PEDs in monthly consignments from 30 June to 30 August for printing. Question papers for the deaf were handed to PEDS also in August for printing, while the braille question papers were handed to PEDs a few weeks prior to the commencement of the examination for final packaging and distribution. Most PEDS commenced with the printing of question papers from August and were completed by mid-October 2012. The packing of question papers commenced in August 2012 and concluded in October 2012.

In 2010, the DBE in conjunction with PEDs developed the *Norms and Standards for Printing, Packing and Distribution of Question Papers*, to ensure consistency regarding these processes across PEDs. PEDs were given a time frame within which to attain full compliance to the Norms and Standards. It is encouraging to note that, on an annual basis, there are improvements with regards to compliance to the stipulated Norms and Standards by PEDs.

In 2012, there were a reduced number of queries received from examination centres in terms of shortage of question papers. PEDS have developed efficient, secure and well managed in-house printing facilities. This allows for full control by the department and minimises risks. In a few of the PEDs, printing is done by a reputable service provider, under the direct supervision of the PED. In 2012, three PEDs, namely: Mpumalanga, Northern Cape and KwaZulu-Natal invested in 'State of the Art' printing machines with the latest technology and automated pre-sealing mechanisms, which is highly commendable.

In all PEDS, all question papers for the 2012 examination were pre-sealed to ensure that the packers do not have direct access to the actual question papers during the packing process. Full compliance with regards to pre-sealing was achieved for the first time in 2012. Security measures were also enhanced across the entire system.

Provincial examination offices are responsible for distributing question papers to District offices. The question papers are delivered on a daily basis to schools in most provinces.

### 6.2.2 Administration

The administration of the NSC examination involves the following four key components, namely: registration of centres and candidates; the writing of the examination; monitoring of the examination; and managing the examination irregularities.

**Figure 4: The Administration process**

The key success indicators for the administration process are as follows:

**Administration: Success Indicators**

- Examination centres and candidates are accurately registered on the examination computer system.
- All candidates including learners with special needs are accommodated in the examination.
- Examinations are conducted under controlled conditions.
- All Examination irregularities are appropriately managed.

**(a) Registration of Centres and Candidates**

An examination centre is the venue at which a candidate is assigned to write the examination. In accordance with the Regulations and *Policy on the Conduct, Administration and Management of the National Senior Certificate Examinations*, which stipulates that, “all examination centres must be evaluated, to verify that all the necessary facilities required for conducting the examination are available at the centre”, the PEDs audited the centres to ensure that they satisfy the requirements to serve as examinations centres. In cases where centres had flouted policies and regulations, such centres were deregistered. For 2012, special centres were established and registered by PEDs to cater for the candidates who would have written the examinations of the Eksamen Raad vir Christelike Onderwys (ERCO). In addition, some provinces like Limpopo, Western Cape, Free State and Eastern Cape also established special centres specifically for part-time candidates in their provinces, with the aim of improving the management of repeat candidates and ensuring accessibility to the writing venue.

For a candidate to qualify to write the examinations, he/she must be registered on the Integrated Examinations Computer System (IECS). In terms of the Regulations the candidates are required to be registered on the system by the 15<sup>th</sup> of March in the year they will be writing the examination. This is crucial as it indicates to the province how many candidates will be sitting for a particular paper and the entire examinations, thereby informing planning in terms of the number of question papers and answer books the provinces need to print and prepare for the candidates.

These candidates are registered either as full time candidates based at the public or independent schools or as repeater candidates who were unsuccessful in one or more subjects in the 2011 or previous NSC examinations. The repeater candidates are attached to an institution only for examination purposes and are allowed to enrol for subjects they did not pass in previous examinations. Repeater candidates may carry over their SBA marks to the subsequent year of registration and this is valid for 5 years. These are therefore not compelled to re-do their SBA. However, candidates that intend to improve their SBA mark may register to do so.

### **Promotion of learner access to examinations**

The Department of Basic Education is committed to the principle of broadening access to education in all its programmes. In terms of Public Examinations the Department promotes access in the following ways:

#### **(i) Free Examinations**

Prior to 1996, candidates were required to pay for the examinations. The scrapping of examination fees post 1996 has ensured that no candidate is deprived of the opportunity to register for the NSC examinations.

#### **(ii) No limit to number of subjects**

The candidates are given the latitude to register for any NCS subject of their choice, even if it is registered as the 8<sup>th</sup> subject<sup>1</sup>. However, the NSC requirements must be satisfied, the candidate should be offered tuition in the subject and be able to produce evidence of SBA.

In addition, question papers are made available for all subjects registered irrespective of the number of candidates registered to write the subject. Equine Studies, Nautical Science and Maritime Studies, together with non-official languages, are offered as special subjects to candidates.

#### **(iii) National Senior Certificate Examinations written in prisons**

Prisoners are also allowed to write the examinations in prisons, under very strict conditions similar to the ones applicable to other provincial candidates. This confirms the Department's commitment to ensuring access to all citizens irrespective of their status.

The Department of Correctional Services has established learning centres in at least four provinces to ensure that these candidates are prepared on fulltime basis and supported to write the examinations.

#### **(iv) Candidates allowed to write the examination wherever they are**

Provided prior arrangements are made ahead of schedule, all registered candidates for the National Senior Certificate examination are allowed to write the examinations irrespective of where they are at the time of the conduct of the examination, including hospitals and abroad. These include candidates who may be representing the country in a recognised and registered sport or cultural events, anywhere in the country or abroad. This is done to ensure that no candidate is denied the opportunity to write the examination.

#### **(v) Accommodation of the Grade 12 learners from Eksamenraad Vir Christelike Onderwys (ERCO) seeking to write the National Senior Certificate (NSC) Examination**

Eksamenraad Vir Christelike Onderwys (ERCO) is an independent examining Body that used to conduct the NSC examinations for learners who are from the Christelike Volkseie Onderwys (CVO), Accelerated Christian Education (ACE) independent schools and home scholars.

At the end of 2011, Umalusi, the Council for Quality Assurance in General and Further Education and Training indicated that, the provisional accreditation for ERCO as an examining body will not be extended beyond September 2012. This meant that ERCO was not allowed to examine the NSC for certification purpose in 2012.

<sup>1</sup> Candidates are required in terms of the NSC requirements to register for 7 subjects

Nevertheless, it was agreed by Umalusi and DBE that the learners who would have written the NSC examinations under the ERCO, and who satisfied the requirements to write the 2012 NSC examination be accommodated by the DBE. To that end, all eligible ERCO learners were accommodated to write the 2012 NSC examinations across all nine provinces.

**(vi) Concession for Learners with Special Needs**

Special concessions are also allowed to accommodate Learners with Special Needs who have obtained a Grade 9 certificate or its equivalent, to enroll for the Endorsed National Senior Certificate in Grade 10. These learners are evaluated and their evaluation is verified by the relevant support structures at the various Provincial Education Departments. But the final approval lies with the Head of Education. These candidates are also accommodated further in that their question papers are adapted according to their special needs.

For example, provisions are made for the candidates with the following barriers:

No.	Barrier	Concession
(i)	Blindness	Candidates provided with Brailled paper
(ii)	Visually impaired	Question papers prepared in large print
(iii)	Physically impaired	Scribe
(iv)	Deaf/ hard of hearing	Adapted question papers with simplified language provided for the deaf
(v)	Dyslexic learner	Additional time

Furthermore, these candidates are given an additional time, of up to a maximum of 15 minutes per hour. These scripts are also marked by educators who are experts in special education so as to ensure that these learners are not disadvantaged in any way.

In 2012 the DBE centralized the marking of scripts for the blind and deaf candidates in two provinces namely Gauteng and Western Cape. The aim was to ensure that the answer scripts for these learners are marked consistently across all provinces and discrepancies in the marking are minimized.

A total of 423 Learners with Special Needs (LSEN) in Special Schools enrolled for the 2012 NSC examinations.

**(b) Writing of examination**

The 2012 National Senior Certificate (NSC) Examination was administered across 6623 examination centres to a total of **511 152 fulltime and 81 552 part time** candidates.

Prior to the commencement of the examinations, the candidates need to know their examination numbers, have a confirmation of the subjects they have been registered for and the date the examination will be written. As a result, it is common practice that the examination timetable is made available to schools and individual examination timetables/admission letters<sup>2</sup> are also distributed in good time by PEDs to all examination centres for collection by all the candidates registered for the examination. In cases where the centre has a candidate(s), with disabilities that have been approved for concession or for which an amanuensis is required, the necessary arrangements for scribes/readers/concessions are also made long before examinations are written.

As part of the preparation for the writing, PEDs are in terms of the regulations expected to ensure that the school principal is appointed as Chief invigilator by the District office. The chief invigilator in turn appoints in writing all teachers to be utilised as invigilators for the examination at his/her centre. Private invigilators are usually only appointed for private centres. The Western Cape Province has also since moved from the old practice of appointing private Chief Invigilators and invigilators and from 2012 appointed teachers as invigilators as well, though on **50%** basis with the hope of ultimately appointing only teachers as invigilators.

2 Candidates are not allowed to write the examination without this admission letters

Invigilation is one of the crucial processes in the conduct of the examinations, as it ensures that the examination at the examination centre is conducted in accordance with the prescribed rules and regulations, thereby ensuring a credible NSC examination. To realise this objective, the PEDs have therefore, in terms of the regulations, trained the chief invigilators irrespective of the number of years and times they have been trained or served as Chief invigilators/invigilators to administer the 2012 NSC examination. This training of invigilators is vital as it ensures that; the invigilators are reminded of the procedure to be followed prior to the conduct of the examinations and that the correct procedures are followed when an irregularity is detected.

In most of the PEDs, the training of invigilators was conducted by District officials using a cascading model. In Limpopo, the cascading model is also used but the Head Office officials are also involved in the training at District level. This is a good practice as it ensures that the same message is communicated to District officials as well as chief invigilators and invigilators.

### **(c) Monitoring of examinations**

In accordance with regulations, the PEDs satisfactorily managed the conduct of the examination and there was also an extensive network of monitoring of the conduct of the examinations across the country. The network of monitors comprised monitors from DBE, PEDs, provincial legislatures, and Districts. The DBE also appointed **29** independent monitors and utilised the services of the Integrated Quality Management System (IQMS) moderators to monitor the writing of the examination. The involvement of these additional monitors assisted in increasing the number of examination centres monitored and an estimated 80% of examination centres were monitored at least once during the conduct of the examination.

It is also noteworthy that the Portfolio Committee on Basic Education also conducted oversight visits to KwaZulu-Natal and Northern Cape provinces during the writing of examinations.

The monitoring and support team of the DBE visited examination centres, marking centres, nodal points, distribution points and mark capturing stations in all PEDs throughout the period of the conduct of the 2012 NSC examination, to ensure compliance with the *Regulations on the Conduct, Administration and Management of the National Senior Certificate National Policy on the conduct, administration and management of the assessment of the Senior Certificate*, thereby enhancing and increasing the degree of confidence in the credibility of the 2012 NSC examination.

### **(d) Dealing with irregularities**

All irregularities that were identified during the writing of the 2012 NSC examination were reported immediately and forwarded to the DBE by the PEDs and other Independent Examination bodies daily. These Assessment bodies investigated their respective irregularities and compiled detailed reports, which were then submitted by the Provincial Examination Irregularity Committee (PEIC) to the National Examination Irregularities Committee (NEIC).

The NEIC interrogated these irregularities and where there was a need for further investigation or a review of the action taken or sanction imposed, recommendations were made to the respective PEICs.

Following these processes, a preliminary report was submitted to the Minister of Basic Education and Umalusi, on 27 December 2012, for consideration and approval. On the basis of this report and its own reports, Umalusi was able to declare the 2012 National Senior Certificate examination as credible. To that end, *the Council for Quality Assurance in General and Further Education and Training*, acknowledged that:

*“The November 2012 NSC examinations were administered in terms of the examination policy. There is no current report of any irregularities that would have jeopardized the credibility of the examinations”*

Lastly, it is worth noting that the DBE views any failure to report an irregularity in a very serious light and considers it an irregularity in itself for which PEDs are required to provide a written explanation.

### 6.2.3 Marking

Marking is a critical process of measuring the learners' intellectual performance with the sole purpose of making a judgement. The overarching aim of the marking process is to produce scores that are valid and reliable. The DBE has developed a manual for the marking process which is intended to standardise the marking of all examination processes across provinces. Currently, there are some divergent practices regarding a number of the marking processes. The manual sets norms and standards in each component of the marking process and seeks to establish standardisation. This manual will be implemented in 2013. Figure 5 shows the key components involved in the marking of the NSC examinations.

**Figure 5: The NSC Marking process**

The key success indicators for the marking process are as follows:

**Marking: Success Indicators**

- All logistical arrangements for marking venues, e.g. transport etc were successfully executed.
- Markers, Senior markers and chief markers are appointed in accordance with the PAM, and trained.
- All answer scripts collected, accounted for and distributed to marking centres.
- Answer scripts accurately marked and moderated and raw marks recorded on the mark sheets.

**(a) Appointment of markers**

The appointment of markers is carried out in accordance with criteria set out in the Personnel Administrative Measure (PAM) document. A circular is sent to schools by all provinces and prospective markers who are eligible to apply for marking are requested to apply. The criteria prescribed by the PAM document are as follows:

- (i) A three year post matric qualification with the subject at second or third year level;
- (ii) Three years Grade 12 teaching experience; and
- (iii) Must be currently teaching grade 12.

The information on applications is verified by the school principal. The applications are subjected to the scrutiny of curriculum specialists at the District level who attest to the subject knowledge of the teachers and their level of competence. The applications that comply with the requirements are forwarded to the province for final selection. For the final selection, the criteria in the PAM document are used in collaboration with additional criteria such as the performance of learners taught by the teacher in Grade 12, marking experience and other general indicators of the teacher's performance. To ensure fairness in the process, teacher unions are invited to observe the process. The selection panel makes recommendations to the Head of Department who approves the recommendations and signs the letters of appointment.

A total of 39 039 markers were appointed across provinces in different categories as shown below.

Markers	Number of Markers
Markers	31 325
Senior Markers	5 543
Deputy Chief Markers	778
Chief Markers	725
Internal moderators	668
<b>Total</b>	<b>39 039</b>

The DBE introduced competency tests to assess the proficiency of the teachers in the subject they applied to mark. The competency tests for the selected subjects were developed and approved by the DBE. The policy on the implementation of the competency test was published for public comment. However, due to the non-finalisation of the policy, the competency test could not be piloted in 2012. Plans are afoot to finalise the policy in January 2013 so that the competency test can be implemented in seven subjects in March 2013. The subjects selected for 2013 include Mathematics, Physical Sciences, Life Sciences, Accounting, History, Geography and English First Additional Language. More subjects will be included incrementally and by 2015, all markers for all subjects will be subjected to the competency test before they are appointed.

#### **(b) Selection and Management of the marking centres**

There was a slight reduction in the number of marking centres utilised for the marking of the 2012 NSC, from 123 in 2011 to 118 in 2012. The reduction was welcomed by Umalusi as a move towards ensuring a smaller and more tightly controlled marking process.

All marking centres were selected in accordance with the *Regulations Pertaining to Conduct, Management and Administration of Assessment for the National Senior Certificate*. The following key requirements were considered in the selection of the marking centres, namely: suitable accommodation and appropriate seating facilities, proper ablution facilities, parking space, high security system, appropriate catering facilities and office equipment. In addition, marking centres were expected to have a health clearance certificate and safety measures in terms of fire. The marking centres had to be situated in stable and peaceful environments that were conducive for this crucial process.

All marking centres across provinces are managed by a centre manager and a deputy centre manager. The centre manager is responsible for the overall management of the marking centre. The management team at the marking centres includes the script control manager, who ensures that there is strict control of the flow and the movement of scripts within the marking centre. The chief marker is responsible for the management of the marking of a specific paper and he/she takes final responsibility for the quality and standard of marking of the specific question papers.

The centre manager is also responsible for the management of irregularities that are found at the marking centre. At each of these marking centres a dedicated irregularity officer is appointed to handle all irregularities identified at the marking centre. The intention is to always ensure that all irregularities identified at the marking centre are resolved at the marking centre and only in cases where there is adequate evidence that warrants further investigation, will the results be withheld.

Security is a top priority at the marking centre. Admission to the marking centre is strictly controlled based on authorised officials with identification. Twenty four hour security guard control is a compulsory requirement.

**(c) National standardisation of marking guidelines**

The 2012 marking process began with the national standardisation meeting where chief markers and internal moderators for each of the subjects, whose responsibility is to lead the marking process in each province, were assembled at separate national meetings to refine and review the marking guideline. At the end of this discussion, the marking guideline was finalised and this was the document which served as the standard against which marking across all provinces took place. Any deviations from the marking guideline, for whatever reason, could only be done with the prior approval of the DBE. The internal moderators and chief markers were then exposed to a training session in which exemplar scripts were used to standardise the marking guideline. The same three exemplar scripts were marked by all chief markers and internal moderators and the marks obtained were compared. The training continued until a relative sense of consistency was reached in the awarding of marks by each of the internal moderators and chief markers.

After the national standardisation meeting, internal moderators and chief markers were deployed to marking centres across provinces. The internal moderators and chief markers conducted similar standardisation meetings with the provincial markers to ensure that there was a common understanding of the questions and the expected responses from candidates. The internal moderators and chief markers utilised copies of scripts used at the national standardisation meeting to set a national standard at all marking centres. This approach also provided an opportunity to diagnose markers' strengths and weakness in marking certain questions, which was utilised in the allocation of questions to teams of markers led by the senior markers.

**(d) Marking Process and Moderation of scripts**

At all marking centres, the question marking approach is used to ensure standardisation of marking across specific questions. Moderation is a quality control process used to guide markers to avoid markers being either too stringent or too lenient. The quality assurance comprises one senior marker for five markers, one deputy chief marker for seven senior markers per paper. The deputy chief marker is supervised by the chief marker and the internal moderator is at the pinnacle of the hierarchical structure and is the final arbiter of standards at the marking centres.

The moderation of learners' scripts is the responsibility of the senior marker, the deputy chief marker, the chief marker and the internal moderator. When markers mark their quota based on particular items, these are subjected to moderation by the senior marker who moderates ten percent. Senior markers are expected to focus on markers with more recurrent discrepancies so as to promote reliability in the marking process and reduce the number of appeals by learners who are not satisfied with the final results.

Moderation is also conducted on an external level by the Department of Basic Education and the Quality Assurance Council, Umalusi.

**(e) Monitoring of the marking process**

The DBE appointed **22** moderators who possess high qualifications in the respective subject with extensive experience in the marking of learners' scripts in senior positions, to moderate marking across the 9 provinces in all key subjects. Some of the appointed moderators are current members of the national examining panel. The responsibilities of these moderators were to ensure that there is fairness and reliability in the marking of scripts across provinces.

Monitors from the DBE and PEDs were deployed for all marking centres across provinces to ensure that the marking process was conducted in accordance with the regulations.

## 6.2.4 Resulting, analysis, feedback, appeal and certification

The final leg of the examination process comprises the resulting, analysis of the results and certification. Candidates are also provided an opportunity to appeal should they consider that the results do not accurately reflect their performance in the examination.

**Figure 6: Resulting Process**

The key success indicators for the resulting, analysis, feedback, appeals and certification processes are as follows:

### Resulting: Success Indicators

- All examination and SBA marks are accurately captured on the examination computer system.
- All candidates are accurately and timeously resulted.
- Effective feedback provided to schools.
- All eligible candidates receive certificates.

#### (a) Resulting

Resulting in the examination process is the most crucial stage as it brings to finality the entire examination process. The resulting process is made up of the following :

##### (i) Data capturing

Data capturing is the responsibility of each of the provincial education departments. Marks for school based assessment are captured on mark sheets by the subject teacher and verified by the principal. These marks are then moderated by the subject advisor and only mark sheets that carry the approval of the subject advisor will be captured on the IECS.

In the case of the examination marks, the final marks are transferred from the scripts to the mark sheets. The totaling of marks on the scripts and the transfer of marks to the mark sheet are checked by the examination assistants, appointed for this purpose at the marking centre. These examination mark sheets are then transferred to the capture centre for capture on to the IECS.

The DBE adopts a double mark capture process and the system is designed to ensure that two separate data capture systems must be used for this purpose.

**(ii) Standardisation**

In South Africa, Umalusi is responsible for overseeing the quality assurance of the NSC. One of the important aspects of the quality assurance protocol of Umalusi is the standardisation of the marks, done on a subject level basis. Observers i.e. Higher Education South Africa (HESA), the South African Qualifications Authority (SAQA) and the teacher unions are invited to the meeting at which the results are standardised.

The purpose of the standardisation process is to ensure that candidates are not advantaged or disadvantaged by variations in standards that may occur from year to year. It is based on the principle of equivalence of standards from year to year. Umalusi establishes norms for each subject based on the performance over the last five years and marks are adjusted to these norms, unless there are compelling arguments to indicate otherwise.

The following principles apply to the standardisation process:

- (a) In general, no adjustment should exceed 10% or the historical average;
- (b) Adjustments in excess of 10% could be considered at the upper end to increase the number of distinctions in a subject;
- (c) In the case of individual candidates, the adjustment effected should not exceed 50% of the mark obtained by the candidate;
- (d) If the distribution of the raw marks is below the historical average, the marks may be adjusted upwards, subject to the limitations;
- (e) If the distribution of the raw marks is above the historical average, the marks should be adjusted downwards, subject to the limitations;
- (f) The computer adjusted mark is calculated based on the above principles; and
- (g) For those subjects with a practical component of 50%, raw marks could be accepted.

**(iii) Processing of results**

Once the data has been captured on the IECS, the data is processed to produce subject results per candidate. This result is based only on the examination mark which is used by Umalusi in the standardisation of the marks. After the standardisation process, the other components, i.e. the School Based Assessment (SBA) and practical marks are then added and processed to produce the final mark per subject and this is then further processed to produce the overall result per candidate.

**(iv) Final approval of results**

Umalusi based on its quality assurance processes will consider the final approval of the NSC examination results. The approval of the NSC results is based on:

- a) Compliance with the policy on examinations in the administration of the NSC examinations; and
- b) The occurrence of any serious irregularity that could have compromised the examinations as a whole.

The results of the 2012 NSC examination was approved by Umalusi on 28 December 2012, without any disclaimer or conditions.

**(b) Analysis and feedback**

The analysis of the NSC examination data is important with a view to identifying the weaknesses and strengths as

indicated by the performance of learners, to putting plans in place to address these shortcomings and thus improving learner performance in the ensuing years. Data analysis can be divided into two types, namely: quantitative and qualitative.

Quantitative analysis entails the determination of the national pass rate, the provincial rates, the overall performance of the District and the pass rate per individual school. Added to this is the national, provincial pass rate per subject together with the school subject pass rate. The quantitative data is compared with previous years to determine trends.

The qualitative analysis provides teachers, subject advisors and curriculum planners with diagnostic information regarding the performance of learners in the selected subjects. The qualitative data is consolidated in the National Diagnostic Report which includes a general overview on the learners' performance in each subject, common errors and misconceptions as expressed in the learner responses and suggestions for improvement with regards to teaching and learning. PEDs can use the National Diagnostic Report together with their own Provincial Analysis report on subject performance to plan and develop support strategies for under-performing schools and subjects.

### (c) Certification and Historical records

All candidates that write the NSC examination are issued with a NSC certificate that confirms that the learner has satisfied all the requirements of the NSC qualification. The certificate will indicate whether the learner qualifies for admission to certificate studies, diploma studies or bachelor studies at a higher education institution. In cases where the candidate does not satisfy the requirements for the full qualification but obtains a pass in one or more subjects, such candidates will be issued with a subject certificate.

The DBE maintains the historical records of all certification data, extending from as early as 1914. This includes the certification records of all the ex-departments of education. All the data from the ex-departments has been converted into electronic format and is now accessible to all provincial education departments.

## 6.3 School Based Assessment (SBA)

School Based Assessment comprises the internal informal and formal programme of assessment. The formal programme of assessment is a component that constitutes formal tests, internal examinations as well as practical tests as stipulated in the SAG.

These are recorded and constitute 25% of the final year mark. The informal programme of assessment is made up of assessment tasks and tests that are developed by the teachers based on the criteria set out in the SAG for formative purposes only.

The implementation of school based assessment is the core responsibility of the curriculum section of the provincial education department and subject advisors are entrusted with the task of building the capacity of teachers to develop quality assessment tasks. The examination directorate conducts moderation of the SBA to establish its validity and reliability for inclusion in the final promotion mark in the subject.

**The key success indicators for school based assessment process are as follows**

#### Key Success Indicators

- (a) Assessment tasks that are administered are of the appropriate standard and quality.
- (b) All assessment tasks are marked and marks recorded and finally captured on the IECS.
- (c) A functional moderation system is operational at school, District, provincial and national level.

### 6.3.1 Moderation of School Based Assessment

The moderation conducted by the DBE focused on the evaluation of assessment tasks which are considered as critical inputs in enhancing the validity and reliability of school based assessment. The moderation was conducted from June to August 2012 and focused on the following Grade 12 subjects from selected Districts and schools in all nine provinces, namely, Accounting, English FAL, Geography, History, Life Orientation, Life Sciences, Mathematics and Physical Sciences. The final moderation process conducted in October and November 2012 focused on the moderation of assessment tasks and learner evidence in order to ascertain whether the provincial moderation systems are effective in ensuring the production of reliable scores. This final moderation served as a final verification process before marks were included in the final promotion marks. The national moderation team was accompanied by Umalusi moderators who quality assured the process.

In engaging with assessment tasks and tests, the team of moderators appointed by DBE conducted an intensive evaluation of the quality of the assessment tasks and tests and the level of compliance with the prescribed guidelines and relevant Subject Assessment Guidelines. A common national moderation instrument was utilised to measure the quality of the assessment tasks. The criteria include: the quality of the task, time allocation, mark allocation, compliance with content requirement and appropriate distribution of cognitive levels. These criteria allowed moderators to scrutinize and evaluate the credibility and validity of the assessment tasks set and administered for continuous assessment. Feedback was provided to schools and provinces to assist in improving in the quality of assessment tasks in future.

The general findings of the moderation team were as follows:

- (a) Schools complied with the SBA requirements as stipulated in the SAG across provinces.
- (b) There is also an effort by teachers to achieve and maintain the required NCS Grade 12 standard, as displayed in the quality of assessment tasks. Most of the questions were modelled from past years' exam papers. However, the quality of the other assessment tasks such as the case study, written reports and the controlled test was poor in most Districts.
- (c) There is an over-dependence on the past years' papers amongst a large number of teachers.
- (d) Most provinces have systems in place for moderation. There is some evidence to confirm that moderation is taking place at three levels i.e. school level; at cluster level and at District level.

### 6.4 Supplementary Examination

The Supplementary examination is a special examination, which provides learners with a second opportunity to write the NSC examination. Candidates<sup>3</sup> that wrote the 2012 NSC examinations may, in terms of current policy apply for the 2013 NSC Supplementary examination provided they satisfy the following conditions:

- (a) The candidate has not met the minimum promotion and certification requirements, but requires a maximum of two subjects to obtain the National Senior Certificate,
- (b) The candidate is medically unfit and, as a result, is absent from one or more external examinations, he or she may register for the supplementary examination.
- (c) The candidate that does not satisfy the minimum higher education, higher education faculty requirements or the requirements for the specific occupation may be allowed to register for the supplementary examination in a maximum of two subjects, provided the:
  - (i) candidate is one requirement short in meeting the minimum admission requirements for Higher Certificate, Diploma and Bachelor's degree programmes requiring a National Senior Certificate; or

<sup>3</sup> This applies to full-time, repeat and part-time candidates:

- (ii) candidate provides documentary evidence that he or she qualifies for admission to a higher education institution or for an occupation, but does not satisfy the higher education faculty requirements or the requirements for the specific occupation.
- (d) If there is a death in the immediate family of a candidate, or other special reasons for the candidate's absence, he or she may register for the supplementary examination.

The closing date for the 2013 NSC supplementary examination application is Monday, 21 January 2013. Application forms for the 2013 NSC supplementary examination are available from schools or centres where the candidates sat for the examination. The timetable for the 2013 NSC supplementary examination is available on [www.education.gov.za](http://www.education.gov.za) and can be obtained from the PEDs.

## 7. The Nine Provincial Examination Departments

### 7.1 Eastern Cape Provincial Education Department

The Eastern Cape is a largely rural province, some 168 966 km<sup>2</sup> in extent (13, 8% of the total land area of South Africa). It is home to some 6,6 million people, the overwhelming majority of whom are isiXhosa mother tongue speakers. About 2 040 311 people are attending educational institutions of some sort or another.

Educationally, the Eastern Cape is divided into 23 Districts, each with its own District office. Schools are administered through circuits. In total there are 906 senior secondary schools within the Province offering Grade 12 to 69 427 full time candidates. The province has a wide range of schools including special schools urban schools, peri-urban, township and rural schools.

There is dire poverty in the province, with 51, 2% of economically active persons being unemployed. The Eastern Cape has the highest illiteracy rate in the country, with more than 26.5% of its residents having less than a Grade 7 education level.

The Provincial examination system is founded on the prescripts of service delivery, honesty and commitment. The Examinations Directorate is currently located in the Chief Directorate responsible for examinations, assessment, curriculum support and teacher support. This location of examinations has ensured an integrated approach to curriculum and assessment and also brought stability to the process. The unit has a total staff capacity of 50 dedicated staff members.

The province boasts a very efficient script control system which ensures that all scripts are safe, accounted for, well archived and easily retrievable. In addition, the province conducts quality assurance of all Grade 11 promotion and progression schedules prior to the commencement of the new academic year. This ensures that all learners admitted to Grade 12 are legitimate Grade 12 learners. In order to improve examinations and assessment in the province, the Eastern Cape plans to upgrade infrastructure in the Districts to ensure the provision of strong-room facilities in all Districts.

## 7.2 Free State Provincial Education Department

The Free State has 593 examination centres with 24 265 full time candidates and 3 380 part time candidates. The province has a large rural population and the majority of the learners were part of the ex-Bophuthatswana and Qwaqwa Education Departments. The province is currently divided into 5 Districts which are: Motheo, Xhariep, Lejweleputswa, Fezile Dabi and Thabo Mofutsanyana.

The Examinations and Assessment unit in the province administers examinations and assessment relating to the National Senior Certificate (NSC), Senior Certificate (SC), Adult Basic Education and Training (ABET) Level 4, Grade 12 preparatory examinations, Grade 11 final examinations and annual national assessment in Grades 3, 6 and 9.

The Department has a well-functioning unit for examinations and assessment at the provincial office with fully decentralized units in the 5 District offices. The annual budget for exams amounts to an estimate R30 million.

The province introduced item analysis of sampled NSC scripts and this constituted the provincial diagnostic report. The information from the item analysis is utilised by subject advisors to support classroom practice. The positive effect of this is evident in the consistent improvement in the NSC results of the province over the past 4 years.

In addition, a special registration project was introduced in January 2012 to verify grade promotions of learners and ensure that candidates are registered for the correct subject in Grade 12. The province uses SA-SAMS to register candidates for the Grade 12 examination. With the utilization of SA-SAMS, the province is also able to verify the Grade 10 and 11 promotions so as to ensure compliance in terms of the three year NSC qualification.

The province has an efficient script control system in which each script is assigned a unique bar code and scanned to improve control. Thus every script can be tracked throughout the entire process. In addition, plastic pre-sealed bags have been introduced for secure dispatch of scripts.

### 7.3 Gauteng Provincial Education Department

Gauteng is the smallest province in South Africa, with only 1.4% of the land area measuring approximately 18 178km<sup>2</sup>. Gauteng is highly urbanized. Since 2011, it has had a population of nearly 12.3 million, making it the most highly densely populated province in the country. Its population constitutes almost 25% of the total South African population. Gauteng accounts for 33% of South Africa's Gross Domestic Product (GDP) and is the largest sub-national African economy. Gauteng is also responsible for 49.6% of all employee remuneration in the country and 52% of all turn-over institutions. The province's unemployment stands at 25.7%.

The 2012 National Senior Certificate Examinations were written at 787 full-time and 474 part-time/repeater centres. A total of 93 003 full-time candidates were registered for the 2012 NSC examination.

In terms of the management of examinations and assessment, there are two directors – one for the management of Examinations and the other for Assessment (SBA). The directorate has a staff complement of 160 personnel. The Annual budget for exams is about R200 Million.

The following are some of the achievements of the Examinations Directorate in the past five years:

- (a) There has been a reduction in appeals and requests for re-mark and re-check which indicates that candidates have more confidence in the marking processes.
- (b) The MP- Flow software was introduced to track and record the movement of scripts, which ensures that no scripts are lost or unaccounted for.
- (c) The System Change Control (SSC) method to pay markers within 30 calendar days has ensured prompt remuneration of markers.

## 7.4 KwaZulu-Natal Provincial Education Department

The province of KwaZulu-Natal stretches from Port Edward in the south to the borders of Mozambique to the north. The northern part of the province also stretches up to the Swaziland border. It is the country's third smallest province taking up 7.7% of South Africa's land area. The total population in KwaZulu-Natal is 9 790 629.

The KwaZulu-Natal Department of Education is divided into 12 managerial Districts, namely: Amajuba, uMlazi, iLembe, Sisonke, Ugu, uMgungundlovu, uMkhanyakude, uMzinyathi, uThukela, uThungulu and Zululand. The province has 2 781 368 learners in public ordinary schools and 59 767 learners in independent ordinary schools. The province of KwaZulu-Natal is the largest in terms of learner population. KwaZulu-Natal has 132 503 full time candidates.

The examination system in KwaZulu-Natal operates as a Chief Directorate with three directorates, namely: Assessment, Accreditation and Certification, Quality Assurance, and the Examination Administration Directorate. The current staff compliment is 147 personnel. The annual budget for exams is an estimated R200 million.

The province has established twelve District examination offices. Currently, the twelve Districts have surveillance cameras, strong rooms as well as office space and electronic tools of trade required to manage large scale public examinations. The establishment of these offices has contributed to the efficient administration of the examination in the province.

The Department of Education has identified Malgate House as the provincial 'Examination House', which will accommodate all examination officials and processes. State of the Art printing facilities and improved security systems are in the pipeline for 2013.

# Faces and Proc

Director-General: Mr PB Soobrayan

Deputy Director-General: Planning, Information and Assessment Mr SG Padayachee

Chief Director: National Assessment and Public Examinations Dr RR Poliah

Director: Public Examinations Ms P Ogunbanjo

Chief Education Specialists in Public Examinations (Mr W Venter, Ms K Sechoaro, Dr MD Ramoroka)

Director: Examinations and Assessment Free State Mr J Joubert

Director: Examinations and Assessment Gauteng Mr P Masilo

Director: Examinations and Assessment Northern Cape Ms P Phuzi

Chief Director: Curriculum and Examinations North West Dr K Myburg

Director: Examinations and Assessment North West Mr B Nothnagel

Acting Chief Director: Curriculum and Examinations Mpumalanga Mr J Mkhwanazi

Director: Examinations and Assessment Mpumalanga Mr C Manyabane

Acting Chief Director: Curriculum and Examinations Eastern Cape Mr M Mabona

Acting Director: Examinations and Assessment Eastern Cape Ms P Edley

Chief Director: Curriculum and Examinations Western Cape Ms T Singh

Director: Examinations Western Cape Mr AP Classen

Chief Director: Curriculum and Examinations Limpopo Mr M Mphahlele

Director: Examinations and Assessment Limpopo Ms V Tshetho

Chief Director: Curriculum and Examinations KwaZulu-Natal Dr B Mthembu

Director: Examinations and Assessment KwaZulu-Natal Ms P Majazi

# Processes of Exams

Chief Directorate: National Assessment and Public Examinations

Script library for the archiving of NSC learners' scripts

Digital printing and packaging of question papers in Mpumalanga Examinations

Heads of examinations and Umalusi System Administrator

Meeting with Correctional Services

Batches of learners' scripts

Candidate writing examinations

Notice board in the marking centre

Meeting with CIE delegation

The training of markers in Free State

Digital printing and packing in the Northern Cape Exams

A Sample of an NSC Question Paper

National standardisation of marking guideline

Computer system for capturing of marks

The Minister visits the candidate writing examinations in Hospital

Marksheet with learners' scores

Script Control

Examination assistants verify calculations on learner scripts at the marking centre

A controlled instrument for moderation of scripts at the marking centre

## 7.5 Limpopo Provincial Education Department

Limpopo Province is both vast and predominantly rural, with the majority of schools in the rural areas. The majority of the learners were part of the ex-Lebowa, Venda and Gazankulu Homelands. The average distance to the furthest schools is approximately 400km from the Provincial Office. For the 2011/12 Grade 12 NSC Examinations, 92 766 candidates were registered at 1703 Examination Centres in the Province.

The province has five Districts and 134 Circuits managed by District Senior Managers and Circuit Managers respectively. The province is in the process of moving to a ten District structure.

The examinations and assessment directorate is currently operating as a Chief Directorate with three directorates namely: *Examination Services, Systems Administration and Logistics*.

Some of the significant achievements in the last five years include:

- (a) A three-tier checking/quality assurance of internal end of year schedules to ensure strict compliance with promotion requirements in grades 9, 10 and 11;
- (b) Significantly minimised occurrence of irregularities in subject changes and unregistered candidates. This is evident in the decline in provisional/manually generated mark-sheets (in full time examination centres); and

The province plans to train and support the District Assessment Irregularities Committee (DAIC), Circuit Managers and Curriculum/Subject Advisors on Management of Internal Assessment (SBA, Oral and Practical Assessment Task (PAT)) Irregularities.

## 7.6 Mpumalanga Provincial Education Department

Mpumalanga means “Place Where the Sun Rises”. Due to the province’s spectacular scenic beauty and abundance of wildlife, it is one of South Africa’s major tourist destinations. The province has a population of 4 039 939 people and its area covers 76 495 km<sup>2</sup> translating into 6.3% of the total size of the country (RSA). The learner population is 1 054 783.

The Mpumalanga Province has an enrollment of 47 979 full time candidates. The province is predominantly rural with four regions, three of them i.e. Bushbuckridge, Gert Sibande and Nkangala being at least 90% rural. The fourth region, Ehlanzeni region, with mainly township and urban schools has the highest enrolment of 14 960 full time candidates.

Examinations and assessment in the province is managed by the directorate for public examinations that operates from an Examinations House situated in Nelspruit within the Mbombela municipality and has four District public examination offices. Each District has a staff complement of fifteen (15) exam personnel while the provincial Head Office has a staff establishment of seventy three (73) personnel. The annual budget for examinations is an estimated R165 million.

The province has established a ‘State of the Art’ in-house print facility that is able to create barcodes for each question paper, pre-seal, pack and stack electronically with limited human interaction. A central script library has been established for the filing of scripts and this enhances the efficiency and promptness in the retrieval of scripts. The security at the provincial examination house is enhanced by electronic surveillance coverage of the premises and the security systems in all District storage facilities have also been improved. The province has also introduced the registration of learners from grades 10 to 12 on the examination computer system, so that learners are programmatically promoted on an annual basis.

## 7.7 Northern Cape Provincial Education Department

The Northern Cape has an enrollment of 9 234 candidates, writing the NSC examination at 134 centres. The province is predominantly rural with five Districts and twenty six (26) circuits

The province is predominately Afrikaans speaking with different groups clustered in certain areas. The John Taolo Gaetsewe District is Setswana dominant, Pixley Ka Seme is isiXhosa and Afrikaans; and Namaqua and Siyanda are predominantly Afrikaans. The Francis Baard area is a diverse District, predominantly Setswana and Afrikaans.

The vast geographical nature of the Northern Cape distinguishes it from the rest of the country. It has fewer candidates, but distances between towns and schools are huge. This fact necessitated the employment of contract workers to execute the newly implemented distribution model of question papers. The new model ensures the daily delivery of question papers to examination centres.

Examination and Assessment in the province is managed by the examinations directorate which has recently been upgraded to a Chief Directorate. The directorate currently has a staff complement of 75 exam personnel. The annual budget for exams is about R 48 million.

Nodal points have been created to ensure daily delivery of question papers and stationery. This has necessitated the improvement of security and monitoring at nodal points. New buildings have been erected at the provincial examinations Head Office, namely the system administration block, the packaging block and the storage block. This development has provided the PED with more space and flexibility in the examination building. In addition new printing and packing machines have been recently acquired.

Plans are underway in the near future to train and capacitate the Item Development Unit to develop assessment items of a appropriate standard which can be made available for use by teachers and in so doing improve the quality of classroom assessment in schools.

## 7.8 North West Provincial Education Department

North West Province has an enrollment of 27 555 full time candidates, registered at 363 examination centres. The province is a predominately rural province that stretches from Moretele in the far East (along the Mpumalanga and Limpopo borders) to Greater Taung in the West (along the Northern Cape and Free State borders). Towards the South West is the deep rural area of Kagisano Molopo extending to the borders of Botswana. The majority of people are Setswana mother tongue speakers, with few Afrikaans; Sesotho and IsiXhosa speakers. English is spoken primarily as a second language. The majority of the learners were part of the ex- Bophuthatswana Education Department, with schools in all different categories from town, township, rural and farm.

The province has four main Education Districts namely Dr Kenneth Kaunda, Bojanala, Ngaka Modiri Molema and Dr Ruth Segomotsi Mompati.

The Examinations Directorate is located in the Chief Directorate: General and Further Education Training services, responsible for examinations, assessment and curriculum. This location of examinations is crucial because it ensures an integrated approach to curriculum and assessment. The directorate has a staff complement of 62 personnel which includes both professional and admin staff. The Annual budget for examinations is an estimated R100 million.

The province has developed a special computer programme to check whether learners meet the promotion requirements for Grade 10, 11 and 12. This programme was made available to circuit managers, who are responsible for signing off all promotion schedules. This ensures that all learners are correctly promoted in these grades.

There have been improvements in the security systems at the printing section and some Districts, where CCTV cameras have been installed. A double sealing system for scripts has also been introduced. The province plans to introduce the electronic scanning of scripts in 2013.

## 7.9 Western Cape Provincial Education Department

The Western Cape has an enrollment of 45 562 full time candidates writing the NSC examination at 428 centres. The province is a mix of rural and urban with eight Districts (4 rural and 4 urban) and forty nine (49) circuits

The examination and assessment function of the WCED is centrally managed by the Chief Directorate: Assessment and Examinations located at the provincial Head Office in Cape Town. The Chief Directorate consists of the Directorate: Examinations Administration, and the Directorate: Assessment Management.

WCED has made significant improvements in many areas in examination administration and assessment. In 2011, the WCED administered competency tests for prospective markers in the following seven subjects with large enrolments: Accounting, Business Studies, Geography, History, Life Sciences and Mathematics. Markers who obtained 60% and above in the competency tests were reappointed for 2012. For 2012 competency tests were administered in ten subjects (Consumer Studies, Economics and Mathematical Literacy were added).

The province has also introduced a unique code for each marker in order to be able to identify the marker who marked each question. This has proved to be useful in identifying incompetent markers. The WCED has an electronic system for managing subject changes in Grades 10, 11 and 12. The application for Grade 12 subject changes is made on CEMIS at school level, recommended at District level and approved at Head Office. In this way the WCED is able to trace the subject changes in the FET Band.

The province has put forward a proposal of decentralising selected examination functions to Districts. WCED is also currently in the process of investigating the possibility of decentralising the delivery of question papers to Districts and/or nodal points. The daily delivery of question papers will be tested with the Senior Certificate Examination of May/June 2013. Daily collection of scripts from schools has been piloted in the 2012 examinations and will be extended to cover more subjects in future examinations.

## 8. ANALYSIS OF 2012 NATIONAL SENIOR CERTIFICATE (NSC) EXAMINATION RESULTS

### 8.1 2012 NSC Examination Results for full time candidates

Overall performance of candidates (full time) in the 2012 NSC examination:

The overall national results reveal that the 2012 cohort has achieved the highest pass rate of 73.9% since the implementation of the NSC curriculum in 2008 in Grade 12. This significant improvement is a signal that the system is maturing and that teachers and learners are becoming more confident about the content and skills that are assessed in the NSC examinations. The results provide evidence that learner performance is on an upward trajectory and this momentum needs to be maintained and enhanced in coming years. The DBE has also recognised the achievements of the Gauteng province which has recorded the highest achievement rate in 2012 compared to other provinces. The Western Cape and Free State are also commended for achieving 82% and 81% respectively.

The analysis of the subject performance reveals a notable improvement in candidates' performance in key subjects such as Mathematics, Physical Sciences, Accounting, History, Geography and Economics. Improved performance was also noted in the Technical and Arts subjects. The results of the class of 2012 reflect a significant improvement in the quality of education in the country.

The DBE has noted a significant improvement in most of the Districts across provinces which is an indication that systematic monitoring of the curriculum implementation is beginning to bear fruit. The DBE will focus its attention on the following Districts which have experienced a slight drop in performance in the 2012 NSC examination compared to 2011: Sisonke, Umzinyathi, Umlazi and Umgungundlovu ( Kwazulu-Natal), Qumbu, Ngcobo, MT Fletcher, King Williams Town, Lady Frere and Cradock (Eastern Cape) Capricorn (Limpopo) Dr. R.S. Mompoti District (North West) , Cape Winelands, Metropole\_South and Overberg (Western Cape). It is important to recognize the significant improvement of Bohlabela District in the Mpumalanga province which has over a four year period, achieved remarkable improvement from 28% in 2009 to 61% in 2012.

**Table 5: Overall performance of candidates in the 2012 NSC examination**

Province	2012		
	Total wrote	Total Achieved	% achieved
Eastern Cape	63 989	39 443	61.6
Free State	24 265	19 676	81.1
Gauteng	89 627	75 214	83.9
KwaZulu-Natal	127 253	93 003	73.1
Limpopo	77 360	51 745	66.9
Mpumalanga	47 889	33 504	70.0

<b>National</b>	<b>552 073</b>	<b>334 716</b>	<b>60.6</b>	<b>537 543</b>	<b>364 147</b>	<b>67.8</b>	<b>496 090</b>	<b>348 117</b>	<b>70.2</b>	<b>511 152</b>	<b>377 829</b>	<b>73.9</b>

The number of candidates passing NSC examinations increased from **348 117** in 2011 to **377 829** in 2012.

Figure 7: NSC performance, 2008 to 2012

The overall pass rate in 2012 is 73.9%, this shows a significant increase from 62.6% in 2008.

Figure 8: Comparison of NSC passes by province, 2010 to 2012

In 2012, Gauteng had the highest percentage of NSC passes. There has been a remarkable increase across the provinces although there was a slight drop in the Western Cape.

Figure 9: Percentage difference in performance in provinces between 2011 and 2012

In 2012, Northern Cape had the highest percentage increase from 2011.

In 2012, Western Cape had the highest percentage of learners that passed with Bachelor's at 36.5%, followed by Gauteng at 36.2%. However it is important to note that there has been a general increase in the number of Bachelor passes across all provinces.

Figure 10: Comparison of Bachelor's passes by provinces, 2008 - 2012

Candidates qualifying for Bachelor studies increased from 20% in 2008 to 26.6% in 2012.

Table 10: Overall performance of candidates in the 2012 NSC examination by gender

<b>Total</b>	<b>118</b>	<b>461</b>	<b>1 153</b>	<b>2 071</b>	<b>2 247</b>	<b>5</b>	<b>429</b>

NB: 573 Schools do not have a Quintile ranking, hence these schools are excluded from this table.

## SUBJECT ANALYSIS

## NSC CANDIDATES' PERFORMANCE IN HOME LANGUAGES, 2010 to 2012

Table 15: Candidates' performance in Home Languages (official languages), 2010 - 2012

Home Language	2010			2011			2012		
	Total Wrote	No. achieved 40% & above	% achieved 40% & above	Total Wrote	No. achieved 40% & above	% achieved 40% & above	Total Wrote	No. achieved 40% & above	% achieved 40% & above
Afrikaans	53 439	51 944	97.2	47 971	47 068	98.1	48 471	47 650	98.3
English	94 929	88 060	92.8	85 495	80 407	94.0	95 338	90 821	95.3
IsiNdebele	4 190	4 181	99.8	3 685	3 682	99.9	3 525	3 523	99.9
IsiXhosa	70 377	70 131	99.7	71 780	71 665	99.8	72 215	72 112	99.9
IsiZulu	122 694	121 643	99.1	124 412	123 637	99.4	125 325	124 617	99.4
Sepedi	68 569	68 104	99.3	58 122	57 612	99.1	60 296	60 081	99.6
Sesotho	28 750	28 461	99.0	26 482	26 287	99.3	25 151	25 066	99.7
Setswana	41 095	40 847	99.4	35 213	35 006	99.4	36 698	36 600	99.7
SiSwati	16 037	15 902	99.2	15 527	15 436	99.4	16 214	16 101	99.3
Tshivenda	19 702	19 669	99.8	12 649	12 639	99.9	13 607	13 595	99.9
Xitsonga	27 102	26 855	99.1	21 279	21 137	99.3	20 964	20 797	99.2

Generally, candidates performed well in Home Languages.

Table 16: Candidates' performance in First Additional Language, 2010 to 2012

Subject Name	2010			2011			2012		
	Wrote	Achieved at 30% & above	% achieved	Wrote	Achieved at 30% & above	% achieved	Wrote	Achieved at 30% & above	% achieved
Afrikaans First Additional Language	77 449	72 191	93.2	68 455	63 965	93.4	75 843	69 880	92.1
English First Additional Language	449 080	424 392	94.5	414 480	398 740	96.2	419 263	410 255	97.9
IsiNdebele First Additional Language	0	0	0	1	1	100.0	17	17	100.0
IsiXhosa First Additional Language	1 446	1 440	99.6	1 547	1 541	99.6	1 774	1 772	99.9
IsiZulu First Additional Language	11 094	11 019	99.3	10 943	10 887	99.5	12 829	12 768	99.5
Sepedi First Additional Language	350	349	99.7	280	275	98.2	397	393	99.0
Sesotho First Additional Language	538	535	99.4	593	588	99.2	533	533	100.0
Setswana First Additional Language	203	203	100.0	181	179	98.9	244	244	100.0
SiSwati First Additional Language	285	282	98.9	281	279	99.3	314	314	100.0
Tshivenda First Additional Language	15	15	100.0	8	8	100.0	18	18	100.0
Xitsonga First Additional Language	17	17	100.0	9	9	100.0	21	21	100.0

Candidates' performance in First Additional Languages is consistent.

## COMPARISON OF NSC CANDIDATES' PERFORMANCE BY SELECTED SUBJECT, 2009 TO 2012

Table 17: Candidates' performance at 30% and above in selected subjects, 2009 – 2012

## 9. CONCLUSION

The 2012 NSC Technical Report provides a valuable repository of data that is relevant for the continuous review and reshaping of the educational endeavour which is multifaceted and highly complex. This report serves as an important point of departure for the five year review, which will be further analysed, interrogated and consolidated over the next few months at all levels in the system. There are certainly a number of significant gains made in the system over the last five years of the National Senior Certificate and there are areas that warrant much attention and effort in the next few years. This report, together with the School Performance Report, the School Subject Report and the National Diagnostic Report on Learner Performance, will constitute the armoury of all curriculum and assessment officials who will be traversing the length and breadth of the country, confronting and engaging with the impediments of quality education. The Department of Basic Education is convinced that the schooling sector, despite its serious challenges, is beginning to move forward on the trajectory of improved school performance.
