

FOREWORD

The Development Indicators released during the last months of 2010, are a product of a variety of official statistics, government data bases and research by various institutions and like previous editions are clustered into about ten themes, namely economic growth and transformation, employment, poverty, inequality, household and community assets, health, education, social cohesion, safety and security, international relations and good governance.

The Development Indicators are important in that they are measures that assist in understanding the impact of various government policies and programmes on the country and its citizens. In many spheres there are improvements generally, for example access to basic services, remains on the increase. In some cases though the improvements are not as much as we would have liked, for example the Infant Mortality rate at 44.7 deaths per 1000 live births is not likely to reduce to the MDG target of 18 deaths per 1000 live births by 2014. Others show a negative trend:

- Maternal Mortality is on the increase largely due to HIV/AIDS, hypertension and obstetric haemorrhage.
- The economic crisis has also had a negative effect on growth and employment, poverty reduction, and public finances. It will take some time before employment, growth and investment rises to pre crises levels especially as global economy remains weak and fraught with risk.

The indicators come at a right time with the launch of the outcomes methodology under the leadership of the Department of Performance Monitoring and Evaluation, complementing the data that enables government to improve its performance and for citizens to hold us accountable for our performance.

This publication was put together by staff in both the National Planning Commission Secretariat and the Department of Performance monitoring and Evaluation. We would like to thank them for their effort, attention to detail and perseverance.

Trevor A Manuel, MP
Minister in The Presidency: National Planning Commission

SOUTH AFRICA

Development Indicators

1	GDP 2009			
	Real		Nominal	
	R 1 782 262 bn	\$ 211 239 bn	R 2 407 689 bn	\$ 285 366 bn

Demographic data	84
------------------	----

1 GROSS DOMESTIC PRODUCT (GDP) GROWTH

Goal	GDP growth of 6% per annum
Trend analysis	The quarterly data series given represents current growth in GDP over a 16 year period (1993 to 2010). In this period, the highest GDP growth was at 5.6% in 2006; while the lowest was in 2009 at -1.8%. The fall in growth from 5.5% in 2007 to 3.7% in 2008 and then to -1.8% may be attributed to the global financial and economic crisis which affected all sectors, but especially demand for exports. South Africa emerged from the recession in the third quarter of 2009 with growth for the second quarter of 2010 at 2.8%.

REAL GDP GROWTH

%	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
GDP growth	3.2	3.1	4.3	2.6	0.5	2.4	4.2	2.7	3.7	2.9	4.6	5.3	5.6	5.5	3.7	-1.7

GDP (YEAR ON YEAR)

Definition	Market value of all final goods and services produced within a country in a given period of time; Real GDP is the nominal GDP adjusted for inflation
Data source	South African Reserve Bank (SARB) Quarterly Bulletins based on Statistics South Africa's data. Data supplied by National Treasury, Year on Year
Data note	The quarterly data series is used for the graph, while the table uses annual data (see dataset below)

2 REAL PER CAPITA GDP GROWTH

Goal	To grow per capita income by 3 per cent or more annually
Trend analysis	The target real per capita GDP growth in the period 1994 to 2009 was 3% or more annually. This growth target was met annually in the period 2004 to 2007. The highest per capita GDP growth was in 2006 and 2007 at a steady 4.2%. The lowest per capita GDP growth was in 2009 at -2.8% due to the decline in GDP as a result of the global financial and economic crisis.

REAL PER CAPITA GDP GROWTH

%	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

REAL PER CAPITA GDP GROWTH

Definition	GDP divided by population
Data source	South African Reserve Bank (SARB) Quarterly Bulletins based on Statistics South Africa's data. Data supplied by National Treasury

3 FOREIGN DIRECT INVESTMENT (FDI)

Goal To increase greenfield investment in South Africa

Trend analysis FDI trends are not too clear especially since there are massive jumps caused in part by large investments. For example the boost in 2005 was mainly due to British Bank Barclays purchasing 60% stake in Absa, South Africa's fourth-largest bank, and the one in 2007/8 due to China's largest commercial bank, state owned Industrial and Commercial Bank of China (ICBC), buying a 20% stake in Standard Bank.

FOREIGN DIRECT INVESTMENT (FDI)

	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

FOREIGN DIRECT INVESTMENT (FDI)

Definition Long-term direct investment by foreigners in the economy

Data source South African Reserve Bank (SARB) Quarterly Bulletins. Data supplied by National Treasury

4 GROSS FIXED CAPITAL FORMATION

Goal	To reach 25% per year by 2014
------	-------------------------------

Trend analysis	The goal set for GFCF is to reach a GFCF figure of 25% per year by 2014. Government and public enterprises led the recent capital formation drive. The period (2001 to 2009) showed a steady increase in GFCF reaching the highest GFCF of the 16 year period of 22.5% in 2008. Since the global recession there has been a decline in fixed investment but it is expected to pick-up once growth re-emerges.
----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

GROSS FIXED CAPITAL FORMATION AS A PERCENTAGE OF GDP

%	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
GFCF	15.2	15.9	16.3	16.5	17.1	15.3	14.9	14.8	14.7	15.5	16.0	16.8	18.3	20.2	22.5	22.4

GROSS FIXED CAPITAL FORMATION AS A PERCENTAGE OF GDP

Definition	Total fixed investment by private companies and individuals, state owned enterprises and government, including depreciation
Data source	South African Reserve Bank (SARB) Quarterly Bulletins. Data supplied by National Treasury
Data Note	The quarterly data series is used to update the graph, while the table uses annual data

5 BUDGET SURPLUS OR DEFICIT BEFORE BORROWING

Goal Fiscal policy aims to smooth economic cycles while increasing expenditure on government priorities

Trend analysis

The 16 year period under review shows negative budget deficit percentages across all the years except for the low budget surpluses witnessed in 2006/7 and 2007/8 of 0.7% and 0.9% respectively. The highest year of government deficit in this series is -9.1% in 1993/4 before the transition to democracy. The second highest government deficit year is 2009/10 at -7.3%; this may be attributed to the counter cyclical policy stance adopted by government during and post the financial and economic crisis.

BUDGET SURPLUS OR DEFICIT BEFORE BORROWING AS PERCENTAGE OF GDP

%	1993/94	1994/95	1995/96	1996/97	1997/98	1998/99	1999/00	2000/01	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07	2007/08	2008/09	2009/10

BUDGET SURPLUS OR DEFICIT BEFORE BORROWING AS PERCENTAGE OF GDP

Definition

Difference between total government revenue and expenditure as percentage of GDP

Data source

National Treasury Medium Term Budget Policy Statement Budget Review and National Treasury Budget Vote debate.

ECONOMIC GROWTH AND TRANSFORMATION

Economic governance

Development Indicators

6 GOVERNMENT DEBT

Goal	Government aims to limit its debt and reduce its demands on the financial markets. This normally leads to lower interest rates and higher private-sector investment
Trend analysis	In the 16 year period at hand, government managed to reduce government debt as a percentage of GDP from 43.5% in 1994 to 22.2% in 2009. The debt to GDP ratio is expected to rise as a result of the deficit financing employed following the 2008/9 financial and economic crisis, but will still be low in international terms.

GOVERNMENT DEBT AS PERCENTAGE OF GDP

%	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Government Debt	43.5	49.1	49.5	48.9	48.0	49.9	46.6	43.9	43.9	38.5	36.3	35.0	32.6	28.6	24.0	22.2

GOVERNMENT DEBT AS PERCENTAGE OF GDP

Definition	In this definition government includes national and provincial spheres. Forward estimates of foreign debt are based on National Treasury's exchange rate projections
Data source	South African Reserve Bank. Data supplied by National Treasury
Data Note	Net loan debt is gross loan debt minus National Revenue Fund bank balances and is calculated with due account of the bank balances of the National Revenue Fund (balances of government's accounts with the Reserve Bank and the tax and loans accounts with commercial banks). Fiscal year starting April 1

7 INTEREST RATES: REAL AND NOMINAL

Goal	Government would like to have low real interest rate that does promote the sustainability of growth and employment creation
Trend analysis	The real interest rate fell gradually in the period during which the economy grew rapidly, rising slightly in 2008 in response to inflationary demands. It is trending downwards again. The advantages of a low real interest rate is that the cost of capital is reduced and therefore investment is stimulated and jobs created. It could also facilitate an undesirable and unsustainable increase in household debt.

INTEREST RATES

Average	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Real Interest	6.6	9.1	12.0	11.5	14.7	13.0	9.2	8.1	6.4	9.3	9.9	7.2	8.0	7.1	5.2	4.6
Nominal Interest	15.6	17.9	19.5	20.0	21.8	18.0	14.5	13.8	15.8	15.0	11.3	10.6	11.2	13.2	15.1	11.8

INTEREST RATES

Definition	Nominal interest rate is = prime overdraft rate. Real interest rate is = prime less Consumer Price Index
Data source	South African Reserve Bank (SARB). Data supplied by National Treasury

8 INFLATION MEASURES: CPI AND CPIX

Goal	Inflation measures: Consumer Price Index (CPI) and Consumer price index excluding interest rates on mortgage bonds (CPIX)
Trend analysis	StatsSA recently changed the CPIx to reflect changes in consumption patterns and to exclude luxury items that may record high expenditure because they are expensive, but are only bought by a small number of households. The CPI basket now includes the price of transport by minibus taxi, funeral costs, funeral insurance, internet service provider fees and laptops. Inflationary pressures in the South African economy has been on a slow downward trend since 2000 with some spikes for example in 2008 mainly as a result of exogenous factors. This has allowed the monetary authorities space to relax monetary policy.

INFLATION MEASURES

Average	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
CPI: All urban	8.9	8.7	7.4	8.6	6.9	5.2	5.3	5.7	9.2	5.9	1.4	3.4	4.6	7.1	11.5	7.2
CPIX: Metro & other urban					7.1	6.9	7.7	6.6	9.3	6.8	4.3	3.9	4.6	6.5	11.3	

INFLATION MEASURES

Definition	Rise in prices of a typical basket of goods as measured by Statistics South Africa (StatsSA). The previously targeted CPIX (metro and other urban areas) excluded interest rates on mortgage bonds. The currently targeted index is the headline CPI for all urban areas
Data source	Statistics South Africa's CPI and CPIX data. Data supplied by National Treasury
Data Note	The quarterly data series is used for the graph to bring it up to date while the table used the annual data. Only CPI data is presented for 2009

9 BOND POINTS SPREAD

Goal	South Africa should pay as small a premium as possible on its bonds issue
------	---------------------------------------------------------------------------

Trend analysis	The bond points spread increased from 93 in 2006 to 600 basis points in the first quarter of 2009 indicating a rise in perceptions of risk in all emerging economies as perceived among investors, especially during the economic and financial crisis. Its decline to 200 indicates more realistic levels for an economy that has its economic fundamentals in place. (is not highly indebted (relatively speaking) and has a robust financial and banking system)
----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

BOND POINTS SPREAD

Average	2001	2002	2003	2004	2005	2006	2007	2008	2009	2009
Bond Points Spread	291	266	178	147	99	93	105	339	275	

BOND POINTS SPREAD

Definition	Measurement of risk between developed and developing economy in terms of difference paid for borrowing
Data source	JP Morgan Emerging Market Bond Index South African data via Bloomberg (JPBSGDSA index). Data supplied by National Treasury
Data Note	The quarterly data series is used for the graph while the table uses annual data

10 EXPENDITURE ON RESEARCH AND DEVELOPMENT (R&D)

Goal	To maintain R&D expenditure of at least 1 per cent of GDP
------	-----------------------------------------------------------

Trend analysis	R&D is vital to a country's economic growth as it determines its future competitiveness. South Africa seeks to maintain R&D expenditure of at least 1% of GDP. The series at hand tracks the period 1991/92 to 2007/8, and shows that Gross Expenditure on R&D figure had a steady increase over the years, from R2.7billion to a high of R18.6billion in 2007/8. Gauteng is the highest contributor to the total R&D expenditure, followed by Western Cape and then KwaZulu Natal, while the other provinces lag behind. The goal of at least 1% R&D expenditure as a percentage of GDP was almost realized in 2005/6, 2006/7, 2007/8 (0.92, 0.95, 0.93 respectively) but the negative trend since 2006/07 is a matter of concern. As indicated in the 2008 development indicators report, the greatest threat to R&D is the low rate of passes in Mathematics and Science in high schools and the relatively low proportion of Science, Engineering and Technology (SET) graduates from universities. Policies are now in place to address that.
----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

EXPENDITURE ON R&D AS A PERCENTAGE OF GDP

Definition	Amount of private and public funds spent on Research and Development
Data source	National Survey of Research and Experimental Development 2006/07 HRSC; 1991-1998 FRD commissioned by DASCT 2001-2006 CeSTII-HSRC R&D survey commissioned by Department of Science and Technology. Data supplied by Department of Science and Technology
Data Note	Expenditure on Research and Development for the government sector for the years 1993/94 and 1997/98 includes Science Councils. FTE = Full Time Equivalent. This conversion is used to express the amount of time a researcher spent conducting R&D. Doctoral students are included as researchers. Total employment is based on the Labour Force Surveys of Statistics South Africa and is not restricted to the formal non-agricultural sectors

11 PATENTS

Goal	To improve Competitiveness of South Africa economy
Trend analysis	Like R&D expenditure, patents contribute towards a country's future competitiveness. From 2002 to 2007, the highest number of patents granted to South Africa by another patent office was 604 patents and these were granted by the United States of America, followed by Australia and then the European patent office. The total number of patents, according to the South African Patent Office, increased steadily between 2003 and 2008, from 52 215 to 62 367.

Definition	a Patent is a set of exclusive rights granted by a state (national government) to an inventor or their assignee for a limited period of time in exchange for a public disclosure of an invention
Data source	1. Companies and Intellectual Property Registration Office (CIPRO) 2. http://www.wipo.int/ipstats/en/statistics/patents/index.html : National advisory council innovation, 2009/10
Data Note	Twelve of a total of 56 patent offices data are given in descending order of total number of patents granted during 2002 to 2007

12 BALANCE OF PAYMENTS

Goal	To increase the ratio of exports to GDP
Trend analysis	In the period 1994 to 2009, exports as a percentage of GDP increased steadily from 22.1% in 1994 to a high of 32.9% in 2002, and then fell to 27.9% in 2003, only to climb steadily from 26.4% in 2004 to 35.5% in 2008. The general trend is upward with a slight decline in 2009 as a result of the global economic downturn. Imports fuelled by the consumer spending and fixed capital investments also increased from 19.9% in 1994 to 28% in 2009 having peaked in 2008 at 38.5%. The current account deficit reached worrying levels of 7.2% in 2007 but is now reducing as better growth prospects/returns in emerging economies such as South Africa and low interest rates in the North encourage capital inflows. Excessive capital inflows can have un-intended consequences such as asset-price bubbles, overheating economies, exchange rate volatility and financial system instability.

EXPORTS, IMPORTS TRADE BALANCE AND BALANCE ON CURRENT ACCOUNT

BALANCE OF PAYMENTS

Definition	Trade balance: Merchandise exports plus Net gold exports minus Merchandise imports (fob) Balance on current account: Trade balance + net income payments + net service payments + current transfers. Exports: The quantity or value of all that is exported into a country Imports: The quantity or value of all that is imported into a country
Data source	South African Reserve Bank (SARB) Quarterly Bulletins. Data supplied by National Treasury
Data note	The quarterly data is used for the graph to bring it up to date while the table uses the annual data up to December of each year

13 SOUTH AFRICA'S COMPETITIVENESS OUTLOOK

Goal	To promote international competitiveness of South Africa's economy
Trend analysis	According to this index, South Africa is still to reach and better the heights of 2006/07 where it ranked 36 in global competitiveness. South Africa's internal competitiveness indices is generally weakened by low labour market efficiency, poor labour-employer relations, low educational performance, high crime levels and high unemployment. South Africa strength is in ease of doing business, robust financial markets, quality of institutions, strong intellectual property protection and accountability of private institutions. The country's reporting and auditing systems are the second best in the world, with only Hong Kong scoring higher.

GLOBAL COMPETITIVENESS – WEF

14 KNOWLEDGE-BASED ECONOMY INDEX

Goal	Transforming South Africa from a resource-based economy to become a knowledge-based economy
Trend analysis	South Africa's ranking has slipped gradually on the Knowledge based economy index from 49th in 1995 to 65th in 2009. This is a reflection of the low-university throughput, slow internet penetration and decreasing funding for research and development.

KNOWLEDGE-BASED ECONOMY INDEX

	1995	2007	2008	2009
Estonia	29	25	21	21
Hungary	31	28	28	27

Botswana	78	84	85	95

Definition	Countries are ranked in order from "best" to "worst" using their actual scores on each variable. Then their scores are normalized on a scale of 0 to 10 against all countries in the comparison group. 10 is the top score for the top performers and 0 the worst for the laggards
Data source	2008 KAM Report (www.worldbank.org/kam)

15 BLACK ECONOMIC EMPOWERMENT (BEE) TRANSACTIONS

Goal	To empower historically disadvantaged South Africans
Trend analysis	BEE transactions peaked in 2003 and 2004, after the BBBEE Act was passed and several industry chapters were adopted. BEE levels of ownership however still remain relatively low overall. The Presidential BEE Advisory Council will assist in advising the state and even the private sector on how to fast track sustainable BEE.

BEE TRANSACTIONS

		1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

BEE TRANSACTIONS

Definition	Value of recorded BEE transactions
Data source	Ernst and Young handbooks on Mergers and Acquisitions

16 BLACK AND FEMALE MANAGERS

Goal	To broadly reflect the demographic make-up of the country in the management of companies and organisations
Trend analysis	There is a positive trend in employment of black managers, but less so for black women. Companies must intensify their efforts to improve representativity and drive transformation

PERCENTAGE OF TOP AND SENIOR MANAGERS WHO ARE BLACK

	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Top managers	12.7%	25.1%	18.4%	23.8%	21.1%	27.2%	22.2%	28.8%	24.2%	32.2%
Senior Managers	18.5%	19.1%	22.2%	27.3%	25.7%	27.5%	26.9%	32.4%	32.5%	35.5%

PERCENTAGE OF TOP AND SENIOR MANAGERS WHO ARE FEMALE

	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Top Managers	12.4%	11.9%	13.8%	14.1%	15.1%	16.5%	21.6%	17.8%	17.8%	18.0%
Senior Managers	21.0%	17.7%	21.6%	22.3%	23.7%	23.6%	27.4%	24.9%	27.8%	26.7%

Definition	Black managers include African Coloured and Indian
Data source	For odd years (2001 2003 2005 2007) data is based on large companies only because small companies report once in 2 years For even years (2002 2004 2006 2008) data is based on all companies (large and small)
Data note	Department of Labour Commission for Employment Equity (CEE) annual reports up to 2007-2008

17 Employment

Goal To increase employment by 2014. Numerical target is approximately 16 million employed

Trend analysis The number of total employed increased from 11,2 million in 2001 to 13,8 million in 2008 and then declined to 12,7 million in 2010. The decline in the total number of jobs is a result of the global economic crisis, such that the unemployment rate – which had peaked at 31,2% in March 2003 – dropped to 23% in 2007 has again increased to 24,2% in 2009. The number of jobs lost during the economic crisis is yet to be regained.

TOTAL EMPLOYMENT

Definition Persons aged 15-64 who did any work or who did not work but had a job or business in the seven days prior to the survey interview
Labour force participation rate is the proportion of the working-age population that is either employed or unemployed
(labour absorption rate) is the proportion of the working-age population that is employed

Data source Statistics South Africa Labour Force Surveys

18 UNEMPLOYMENT (broad and narrow)

Goal The goal is to cut unemployment by at least half to a maximum of 14 per cent in 2014

Trend analysis Unemployment in the strict sense of the term, increased from 2 million in 1995 to 4,4 million in 2003, has decreased to 3,9 million in 2007 and increased to 4,1 million in second quarter of 2009. This is a result of the fact that the number of jobs created since 2003 has started to outstrip the growth in the labour force with a reversal in the trend since the start of the global economic crisis of 2007. If this trend prior to financial crisis continues we should see a continuous decline in unemployment rate going forward.

UNEMPLOYMENT (BROAD AND NARROW)

UNEMPLOYMENT RATE

Definition	Narrow (official) - Number of people who were without work in the week preceding the interview have taken active steps to look for work and were available for work. Broad (unofficial) - Number of people who were without work in the week preceding the interview and were available for work
Data source	Statistics South Africa's Labour Force Survey and Quarterly Labour Force Surveys

19 NET WORK OPPORTUNITIES CREATED BY EXPANDED PUBLIC WORKS PROGRAMME (EPWP)

Goal	To create temporary work opportunities for the unskilled marginalized unemployed(a minimum of 4.5 million work opportunities per annum)
------	------------------------------------------------------------------------------------------------------------------------------------------

Trend analysis	The extension of temporary employment opportunities through the EPWP has improved since the programmes introduction in 2004, and can be expected to continue to improve due to the introduction of the Community Work Programme as a supplementary programme. Soft and hard infrastructure has been put in place to ensure that the EPWP target of providing employment opportunities and training to at least one million targeted unemployed people in its first five years is met.
----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Definition	A work opportunity is paid work created for an individual for any period of time. The same individual can be employed on different projects and each period of employment will be counted as a work opportunity A work opportunity in the Infrastructure sector has a average duration of four (4) months and in the Environmental and Culture sector an average of duration of six (6) months One Person-Year of work is equal to 230 paid working days including paid training days. The calculated wages paid out to employees on EPWP projects have been calculated by multiplying the minimum wage rate with the person-day's work
Data source	Department of Public Works; Expanded Public Works Programme five year report 2004/05-2008/09. Personal communication

POVERTY AND INEQUALITY

Poverty and inequality

Development Indicators

20 PER CAPITA INCOME

Goal	To halve poverty between 2004 and 2014
Trend analysis	GDP per capita (which averaged less than 1% per annum in period 1994 to 2003), has averaged 3.7% since 2003, with gross national income per capita (measured at 2005 prices) increasing from R28 536 in 1994 to R35 905 in 2010. For the poorest 10% of the population (using AMPS data-constant 2008 prices) monthly income increased from R783 to R1041 between 1994 to 2009. Whilst for the richest 10% of the population monthly income increased from R71 055 per month to R97 899. There are huge income inequalities with the richest 70% of income accruing to the richest 20% and the poorest 10% getting less than 0.6%. The inequality is still of a racial nature as well, with the mean income for an African at R775.46, the median at R406.95 whilst for white the mean is R7,645.58 and median at R5,331.61, with coloureds and Asian a distant in-between.

Definition	Monthly per capita income (2008 constant Rand). The method of deriving plutocratic expenditure weights for official consumer price indices entails the aggregation of expenditure on a specific item across all households and then calculating the share of this aggregate within total consumer expenditure. An alternative method of calculating weights eliminates the bias that arises from the fact that plutocratic weights are a weighted mean of individual household price indices where the weight is that household's expenditure. Democratic weights entail a change in the unit of analysis from the product to the household. In order to arrive at an index that approximates the inflation experience of households in the middle of the expenditure distribution differential weighting of households must be eliminated so that each household's structure of expenditure contributes equally to the overall weights.
Data source	Van der Berg <i>et al</i> (2009) based on All Media and Products Survey (AMPS) of various years (1993 - 2008) Bhorat (2009) based on Statistics SA's Income and Expenditure Survey (IES) data (1995 - 2008).
Notes on calculations	For the AMPS data income is recorded in more than 30 household income brackets. Incomes were converted to per capita levels by applying household size. Pareto estimates of income were estimated in the open interval for each race and household size category. Income was assumed to be distributed equally within income brackets. AMPS income data show very strong growth for 2005 and this income level was maintained and even grew in subsequent years. This is probably more the result of better capturing of incomes in the survey rather than of real income shifts. To rather err on the side of being conservative regarding poverty trends AMPS incomes for these later years were adjusted proportionately downwards to give growth rates of income consistent with the national accounts. Without these adjustments estimated poverty would have fallen even faster. These adjustments do not affect distribution estimates. Adjustment of AMPS income in each year: Adjusted AMPS that for year's income / Unadjusted AMPS2004 income = National account for that year's current income / National account for the 2004 current income. For the IES data the poverty lines have been inflated from their 2000 values using CPI (all items) to 2008 constant Rand. The population has been weighted by the household weight multiplied by the household size (and based on the 2001 Census). The 2008 "plutocratic" estimates were calculated by adjusting the expenditure recorded in the 2005/06 IES for inflation that has been calculated using plutocratic weights. This is the conventional method of deriving expenditure weights for official consumer price indices employed by Statistics South Africa and entails the aggregation of expenditure on a specific item across all households and then calculating the share of this aggregate within total consumer expenditure. As a result the plutocratic index is biased towards the upper end of the expenditure distribution (Oosthuizen 2007). The 2008 "democratic" estimates were calculated by adjusting the expenditure recorded in the 2005/06 IES for inflation that has been calculated using democratic weights. According to this method expenditure weights are first calculated for all households individually with the overall weight calculated as the mean across all households. This method attaches equal weight to each household in calculating the weight of the item in the index and is more representative of household expenditure across the distribution (Oosthuizen 2007). For both the plutocratic and democratic estimates expenditures were adjusted using expenditure decile-specific inflation rates.

POVERTY AND INEQUALITY

Poverty and inequality

Development Indicators

21 LIVING STANDARDS MEASURE (LSM)

Goal	Reducing inequalities
Trend analysis	The monthly real income of the poorest 10% of the population increased from R742 in 1995 to R1386 in 2008/09. Whilst for the richest 10% it almost doubled increasing from R13 416 to R26 602. The richest provinces Gauteng and Western Cape have no one falling in LSM1. The largest number of LSM 1 are in Eastern Cape and KwaZulu Natal.

Definition	The South African Advertising Research Foundation (SAARF) Living Standards Measure (LSM) divides the population into 10 LSM groups 10 (highest) to 1 (lowest) and LSMs are calculated using 29 variables taken directly from the SAARF All Media and Products Survey. It calculates an imputed average monthly income.
Data source	South African Advertising Research Foundation (SAARF)

POVERTY AND INEQUALITY

Poverty and inequality

Development Indicators

22 INEQUALITY MEASURES

Goal	To reduce income inequality
Trend analysis	Poverty and inequality remain major challenges for South Africa. Using the gini-coefficient, inequality worsened from 0.64 to 0.66 in 2008. The driver of the increase in inequality has been between-group inequality. For the realisation of the constitutional mandate of "Human dignity, the achievement of equality and the advancement of human rights and freedoms" deliberate programmes that will optimally reduce inequality need to be driven on all fronts and by all social partners.

INEQUALITY MEASURES

Definition	Gini coefficient: It measures the inequality as a proportion of its theoretical maximum. The Gini coefficient can range from 0 (no inequality) to 1 (complete inequality).
Data source	Van der Berg et al (2009) based on All Media and Products Survey (AMPS) of various years (1993 - 2008) Bhorat (2008) based on Statistics SA's IES data (1995 - 2008)..
Data note	AMPS data - Gini coefficients calculated from data recorded in income brackets and without probing on all individual income sources (such as census data or AMPS) are usually somewhat higher. Trends however should not be affected. For IES data the changes in the values of the Gini coefficients between 1995 and 2005 are statistically significant at the 95 percent level with the exception of Africans. The changes in the values of the Gini coefficients between 2000 and 2005 are not statistically significant at the 95 percent level for the total Asians and Whites. The population in 1995 and 2000 has been weighted by population weights according to the 1996 Census. Population weights are not available for the 2005 dataset and the population has been weighted by the household weight multiplied by the household size - these weights are based on the 2001 Census. It has not been possible to calculate confidence intervals or t-statistics for the Theil measures and as such it becomes impossible to evaluate if the change in the contribution of the two components to total inequality is statistically significant In 2008 the population has been weighted by the household weight multiplied by the household size (and based on the 2001 Census). None of the changes in Gini coefficients are statistically significant. Expenditures were adjusted using expenditure decile-specific inflation rates. See also Indicator 19

POVERTY AND INEQUALITY

Poverty and inequality

Development Indicators

23 POVERTY HEADCOUNT INDEX

Goal	Meeting basic needs of all South Africans
------	-------------------------------------------

Trend analysis	Using a R524 poverty line poverty headcount index decreased from 58% in 2000 to 49% in 2008. Using a R283 poverty line poverty headcount decreased from 38% in 2000 to 22% in 2008. The decline in poverty headcount is largely due to an increase in social grant uptake.

Income Poverty Line [R149.08 per person per month]													23%				12%

Definition	Headcount index (P0) the proportion of the population living below a poverty line using 2008 constant Rand
Data source	Van der Berg et al (2009) based on All Media and Products Survey (AMPS) of various years (1993 - 2008) Bhorat (2009) based on Statistics SA's IES data (1995 - 2008).
Notes on calculations	See indicator 19 and 21

24 POVERTY GAP ANALYSIS: POVERTY GAP INDEX (P1) AND SQUARED POVERTY GAP INDEX (P2)

Goal	To reduce the poverty gap and the severity of poverty
------	-------------------------------------------------------

Trend analysis	Using the latest available data and comparing it with the Income and Expenditure Survey of 1995, it can be concluded that while absolute and relative poverty has declined inequality has worsened. Using a poverty line of R524 a month or a poverty line of R283 a month, poverty depth has declined, over the years. However after the initial success between 1995 and 2005 (if using the R283 per month poverty line), the severity of poverty has not been dented. This could signal that the poverty reduction policies and the social security net is failing the poorest.

POVERTY AND INEQUALITY

Poverty and inequality

Development Indicators

25 SOCIAL - ASSISTANCE SUPPORT

Goal	To provide appropriate social-assistance support to all eligible beneficiaries
Trend analysis	The majority of grant recipients are the 9.57 million recipients of the Child Support Grant - this grant is provided to children in need up to their 18th birthday. The Foster Child Grant provides support for families that have taken in orphaned children and it continues to show strong growth. Uptake of the Old Age Grant remains stable as most of the intended beneficiaries are being reached. It is the provinces with the highest poverty incidence levels that have the highest number of grant recipients, KwaZulu-Natal and Eastern Cape. Northern Cape has the lowest number of recipients because of the very low population density.

Definition	Total number of recipients of social-assistance grants as recorded for each financial year
Data source	South African Social Security Agency's (SASSA) Social Security Pension System (Socpen) National Treasury's Estimates of National Expenditure (2006/07)
Data note	The total figures does not include Grant-in-Aid as Grant-in-Aid is an additional type of grant awarded to persons who might already be receiving other forms of grants such as Old age grants Disability or War veteran's grants as a result of being unable to care for themselves. Grant-in-Aid may create duplicates in terms of head counts. Disability Grant Total consists of Temporary Disability Grant which is a disability grant that is awarded for a period no less than 6 months and not more than 12 months and Permanent disability grant which is a disability grant that is awarded for a period longer than 12 months

26 PEOPLE WITH DISABILITIES

Goal	To implement inclusive education and mainstreaming disability in South Africa
Trend analysis	The tables below shows various aspects of people with disabilities in terms of composition, provision of services and labour composition in the work place. The 2009 General household Survey estimated that people with disability constitute 7.9% of South Africa's population. Despite a gradual decline in grant recipients as a % of total social grants recipients between 1996/7 and 2009/10, the total number of recipients of disability grants increased significantly. The representation of people with disability in the workplace has almost doubled and so has the number of learners in special schools who have passed matric.

Data source	Statistics South Africa Census 1996 2001: Community Survey 2007 South African Social Security Agency(SASSA) Department of Education: Further Education and Training Assessment and Examinations Department of Labour Commission for Employment Equity(CEE) annual report
Data note	The current definition of disability is "the loss or elimination of opportunities to take part in the life of the community equitably with others that is encountered by persons having physical sensory physiological developmental learning neurological or other impairments which may be permanent temporary or episodic in nature thereby causing activity limitations and participation restriction with the mainstream society. These barriers may be due to economic physical social attitudinal and/or cultural factors"

27 MEETING HOUSING NEEDS

Goal	Meeting housing needs and building decent human settlements
Trend analysis	Since 1994, Government has intensified its efforts to accelerate the delivery of housing to the poor, as reflected in the cumulative total number of housing units completed or in progress under the subsidised housing programme that has now reached a cumulative total just over 3 million. The 2009 GHS reported that approximately 76.2% of South African households now live in formal dwellings, up from 64.4% in 1996.

Definition	Approved projects refer to housing projects that have been approved by province in a specific period including social housing the People's Housing Process (PHP) rural hostel development and emergency projects. Planned units refer to the number of units that are planned for an approved project in the relevant period. Approved beneficiaries refer to the numbers of beneficiaries in respect of whom subsidies have been approved for the relevant period. This includes individual subsidies persons benefiting from rural housing and PHP projects hostels and emergency housing projects. Subsidies housing units completed and housing units in progress include all top structures completed in the reporting period and sites serviced number of houses at foundation level or wall plate level constructed on already serviced sites. It also includes construction in greenfield's developments and in rural areas with services.
Data source	1 2 3 4 Household figures are based on Statistics South Africa's data (OHS 1997-1999) (Census 1996 and 2001), GHS 2002-2009 5 6) Housing Subsidy System (HSS) National Department of Human Settlements 7) Provincial housing plans from provincial housing departments National Department of Human Settlements
Data Note	It takes between one and three years for a beneficiary who has been approved to receive housing to actually receive such housing. It would be inaccurate to draw a direct correspondence between planned units and housing units completed (and in progress) in the same year. Housing delivery in the first five years of democracy varied greatly from year to year and from province to province as different systems of reporting and monitoring had to be unified. The difference in household figures is due to the different methodologies used by the departments where data is sourced via a vie the various surveys conducted by Statistics SA

Development Indicators

28 POTABLE WATER

Goal	All people in South Africa to have access to potable water by 2014
Trend analysis	The percentage of households with access to water infrastructure above or equal to the Reconstruction and Development Programme (RDP) standard increased to 93.8% by March 2010. Although the rate of increase in the percentage of households with access to water is gradually slowing down, South Africa is likely to achieve the 2014 Millennium Development Goal of Universal Access to potable water.

Definition	The relevant basic service levels (RDP service levels) are defined as a minimum quantity of 25 litres of potable water per person per day within 200 meters of a household not interrupted for more than seven days in any year and a minimum flow of 10 litres per year for communal water points. This is a substantially higher standard than the basic services defined by the Millennium Development Goals (MDGs) as 20 litres of potable water per person per day within 1 000 metres of a household. MDG goal (Target 10): Halve between 1990 and 2015 the proportion of people without sustainable access to an improved water source
Data source	1) Census 1991 1996 2001 Department of Water Affairs internal processes. 2 3) Census 1991 1996 2001 Department of Water Affairs internal processes Department of Cooperative Governance and Traditional Affairs Municipal Infrastructure Grant (MIG). 4 5 6) Calculation Department of Water Affairs. 7) Census 1991 1996 2001 Department of Water Affairs internal processes Department of Cooperative Governance and Traditional Affairs SNU's (Special Needs Users)

29 SANITATION

Goal	All people in South Africa to have access to sanitation facilities by 2014
Trend analysis	The target date for universal access to sanitation is 2014. Despite efforts to eradicate the bucket system, 8 421 households were still dependent on it in March 2010. The overall number of households with access to sanitation have however increased to 79.9%. It is likely that South Africa will achieve the MDGs related to sanitation.

30 ELECTRICITY

Goal	Universal access to electricity by 2014
------	-----------------------------------------

Trend analysis	The estimated number of households with access to electricity has increased from 4.5 million (50.9%) in 1994 to 9.4 million in 2010 (74.9%). The rate of new electricity connections is slowing down considerably as it now has to be preceded by the establishment of bulk infrastructure in areas that were not previously serviced. The construction and improvement of energy infrastructure forms an important element of government's focus on infrastructure development, particularly in rural areas. As such, better long-term planning of generation, distribution and maintenance is critical for the achievement of the 2014 goal of universal access to electricity.

HOUSEHOLDS WITH ACCESS TO ELECTRICITY

Definition	Number of households connected to grid electricity through Eskom and municipalities. Household figures based on Department of Energy's projection using census data
Data source	1-4) National Electricity Regulator of South Africa; Statistics South Africa Department of Energy
Data Note	The difference in household figures between indicator 27 28 29 is due to the different methodologies used by the departments where data is sourced via a vis the various surveys conducted by Statistics SA

31 LAND RESTITUTION

Goal	Complete the restitution process
Trend analysis	Ninety-five percent of the 79 696 land claims that were lodged since 1994 have been settled. Financial compensation totalled R5.7 billion and Land cost about R12 billion and beneficiaries were 1.6 billion.

32 LAND REDISTRIBUTION

Goal	The redistribution of 30 per cent of the country's agricultural land over 15 years (2000 - 2015)
Trend analysis	Since 1994, approximately 3.1 million hectares of agricultural land has been redistributed. The goal of distributing 30% of the country's agricultural land by 2014 remains a challenge.

33 LIFE EXPECTANCY

Goal	Build a healthy well-educated and prosperous nation indicated by greater life expectancy
------	------------------------------------------------------------------------------------------

Trend analysis	There is a lack of consensus about the calculation of Life Expectancy. Given limitations on reliable data before 2000, Life Expectancy calculations before 2000 need to be further investigated. Based on StatsSA figures, male life expectancy declined between 2001 and 2004 and started improving gradually from 2006 onwards. Female life expectancy also declined between 2001 and 2005, but has also witnessed marginal improvement from 2006 onwards. Combined life expectancy are almost back at the levels of 2001, despite a slight improvement in male life expectancy between 2001 and 2010. ASSA figures also show life expectancy reaching its lowest point around 2005. Life expectancy which is heavily influenced by infant mortality seems to have declined mainly because of HIV/AIDS.
----------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

LIFE EXPECTANCY

Definition	Life expectancy: The number of years a new-born infant would live if prevailing patterns of age-specific mortality rates at the time of birth were to stay the same throughout the child's life
Data source	1 2 3 5) Life Expectancy Statistics South Africa's calculations 4) Life Expectancy: Actuarial Society of South Africa (ASSA) 2003 model

34 INFANT AND CHILD MORTALITY RATE

Goal	To reduce infant (under one year) and child (under five years) morbidity and mortality
Trend analysis	In South Africa data from different sources suggest rising infant and child mortality to 2004 and a decline thereafter but the nature of this data does not allow for unambiguous conclusions. Internationally, infant and child mortality have been dropping in most countries, with sub-Saharan Africa being the exception. South Africa is unlikely to reduce infant mortality to the MDG target of 18 deaths per 1000 live births. There are three major killers of children under five years of age in South Africa: HIV & AIDS, neonatal causes and childhood infections such as pneumonia and diarrhoea.

Definition	The number of children less than one year old who die in a year per 1 000 live births during that year; the number of children under five years who die per 1 000 live births during that year
Data source	1) Statistics South Africa mid-year estimates 2009 2) Statistics South Africa Causes of Death 2004 as published by the Health Systems Trust 3) MRC calculations 4 5) Actuarial Society SA models 6) South African demographics and health surveys
Data Note	Note that Statistics South Africa calculations and ASSA model include the impact of anti-retroviral (ARV) treatment

35 SEVERE MALNUTRITION UNDER FIVE YEARS

Goal	To reduce infant and under-five child morbidity and mortality.
Trend analysis	The trend shows a decrease in the number of children with a weight less than 60% of their estimated 'normal' weight for age. The MDG target is to reduce incidence of severe malnutrition in children under 5 years of age to 0.7 per 1000. Thanks in part to the child support grant, it is possible for South Africa to reach this target.

SEVERE MALNUTRITION UNDER FIVE YEARS - NEW AMBULATORY*

	2001	2002	2003	2004	2005	2006	2007	2008	2009

SEVERE MALNUTRITION UNDER FIVE YEARS - NEW AMBULATORY*

Definition	A new born found to weigh less than 60% of estimated weight for age or to suffer from marasmus kwashiorkor or similar illnesses excluding new born babies. Severe malnutrition might also be denoted as clinically malnourished. New ambulatory Z score Height-for-age (HAZ): HAZ<=-3 = severely stunted; HAZ<=-2 = stunted Z score Weight-for-age (WAZ): WAZ<=-3 = severely underweight; WAZ<=-2 = underweight Z score Weight-for Height (WHZ): WHZ<=-3 = severely wasted; WHZ<=-2 = wasted

36 IMMUNISATION COVERAGE

Goal	To improve child health and reduce infant and under-five mortality and morbidity and attain a coverage rate of 90 per cent.
Trend analysis	Immunisation coverage has been increased from 63% in 1998 to 95.5% in 2009. This shows remarkable progress. It seems as though the implementation of the WHO strategy known as Reach Every District, aimed at improving coverage and protecting children against vaccine preventable diseases, is successful.

IMMUNISATION COVERAGE

	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Immunisation Coverage	63.0%		75.8%	79.5%	80.9%	81.1%	83.1%	90.2%	86.5%	84.5%	88.2%	95.5%

IMMUNISATION COVERAGE PER PROVINCE

IMMUNISATION COVERAGE

Definition	Proportion of children under one year who received all their primary vaccines for tuberculosis (TB) diphtheria whooping cough tetanus polio measles hepatitis B and haemophilus influenza
Data source	District Health Information System

37 MATERNAL MORTALITY RATIO (MMR)

Goal	To improve women's health and reduce maternal and neonatal mortality and morbidity
Trend analysis	Trends in the Maternal Mortality Ratio measure the well-being of mothers and are a key MDG indicator. South Africa is one of 12 countries globally who had an increase in maternal mortality since 1990. According to the latest MDG Country report for South Africa, the Maternal Mortality Ratio could be as high as 625. Given the target of 38, it is highly unlikely that South Africa will achieve the MDG for maternal mortality. The five main causes of maternal mortality in South Africa remained the same during 2002-2004 and 2005-2007, with non-pregnancy related infections, mainly HIV/AIDS, hypertension and obstetric haemorrhage being the most common.

MATERNAL DEATHS / 100 000 LIVE BIRTHS

	1997	1998	1999	2000	2001	2002	2003	2004	2005
1	80.69	84.25	93.19	97.64	116.18	123.71	165.50		
2		73.80					165.50		
3			88.40	116.80	114.50	135.60			
4									400.00
5				230.00					400.00
6					578.00				

MATERNAL DEATHS / 100 000 LIVE BIRTHS

Definition	Deaths of women while pregnant or within 42 days of termination of pregnancy from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes
Data source	1) Statistics SA's calculations based on 'Causes of Death' reports from Department of Home Affairs; 2) DOH: 1998-2003 Demographic survey; 3) Saving Mothers 3rd report on Confidential Enquiries into Maternal Deaths in SA 2002-2004 Department of Health 2006; 4) UNICEF Maternal and Newborn Health 2009; 5) www.MDGmonitoring.org UN estimates; 6) Population Health Metrics 2008 (6)4
Data Note	Following a maternal death in a public hospital, it is standard requirement that a confidential inquiry is held. The DoH MMR calculation uses the reports that are completed in this process.

38 HIV PREVALENCE

Goal	To reduce the prevalence of HIV
Trend analysis	HIV prevalence amongst youth increased slightly between 2009 and 2010, but is generally levelling off. Similar trends are evident for other age groups as well. Variation exist between different data sources. South Africa would probably meet the MDG targets for HIV prevalence in youth, but are unlikely to reach targets for access to antiretroviral drugs, despite significant increases in access to drugs across all Provinces in recent years.

HIV PREVALENCE

%	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010

39 TUBERCULOSIS (TB)

Goal	To halve the incidence of TB between 1990 and 2015
Trend analysis	One of the priorities of Government is to increase the national tuberculosis cure rate to 70% in 2010 by improving interventions for tuberculosis control and management. Although there is a time lag between notification and successful treatment, it is likely that this target will be achieved. South Africa is also most likely going to achieve the MDG goal related to detection and cure of TB related cases. There is however a number of additional TB related MDG targets, that South Africa will most likely not achieve i.e. incidence, prevalence and death rates associated with T.B largely because of the high HIV/AIDS/TB co-infection rates.

40 MALARIA

Goal To reduce malaria morbidity and mortality by 10 per cent each year

Trend analysis The total number of malaria cases reduced by 2 141 cases between 2008 and 2009, but with the fatality rate for the same period increasing from 0.57 to 0.77%. Although the total number of cases reported decreased between 2008 and 2009, overall levels were still higher than for 2007. The peak in 1999/2000 was due to the resistance of the *Anopheles funestus* to synthetic pyrethroids which was used at that time instead of DDT and the high levels of resistance to malaria treatment by the malaria parasite (*Plasmodium falciparum*).

MALARIA

	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

MALARIA

Definition Fatality rate: The number of reported deaths due to malaria divided by number of malaria reported cases multiplied by 100

Data source Department of Health's Malaria Notification System

41 LEARNER: EDUCATOR RATIO IN PUBLIC ORDINARY SCHOOLS

Goal	To reduce learner-educator ratios in line with international standards
------	------------------------------------------------------------------------

Trend analysis	The learner-educator ratio is an education quality indicator (input). At a national level the average learner to educator ratio in 2009 remained at 31:1. It appears that the learner-to-educator ratio has stabilised below the set target of 32:1. However, it is critical to pay attention to disparities within provinces and districts, particularly in poor schools. It is interesting to note that the best performing provinces (Western Cape and Gauteng) do not necessarily have the lowest educator pupil ratio.

Definition	The average number of learners per teachers in a given school year based on headcounts for both learners and teachers (Public ordinary schools data includes independent schools that schools that are subsidised by the DoE. The number of teachers includes both those that are paid by DoE and SGBs.
Data source	1999 data from Department of Education (DoE) (undated) Education Statistics 1999 at a Glance; February 2000 data from DoE Statistics at a glance 2000; 2001 data from DoE (2003), Education Statistics at a Glance in 2001; 2002-2005 data from Education Statistics in SA at a Glance(2005) published November 2006 with data originally sources from 2001-2005 SNAP Survey; 2006 data from DoE 2006 School Realities October 2007 data from DoE. 2008 data from DoE 2008 School Realities. 2009 data from Department of Basic Education

42 ENROLMENT RATES: GROSS ENROLMENT RATE (GER) GENDER PARITY INDEX (GPI)

Goal	To increase participation in education and to eliminate gender disparities
Trend analysis	Both the primary and secondary GPI is between .980 (primary) and 1.020 (secondary) and thus parity has been reached. Gender parity is considered reached when the GPI is between .97 and 1.03. In addition the primary enrolment rate is close to universal. However at secondary school there is a decline for boy learners from the height of 88.2 in 2007 and for girls from 97.6 in 2006. Effort should be put into ensuring that learners complete at least the basic years of school, otherwise they will not be able to participate in the economy in their adult years.

GER AND GPI

	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

GENDER PARITY INDEX

Definition	Gross Enrolment Rate (GER) is the total learner per education level divided by population of corresponding official age in the education level The ratio of GER for female learners to the GER of male learners regardless of age in public and independent ordinary schools for given year
Data source	Education statistics in South Africa at a Glance (2006), published February 2008 with data originally sourced from 2001 - 2006 SNAP surveys (conducted on the 10th school day) School Realities publications 2005 to 2007.

43 NATIONAL SENIOR CERTIFICATE EXAMINATIONS PASS RATE

Goal	To improve the quality of education as reflected in the National Senior Certificate Examinations
------	--------------------------------------------------------------------------------------------------

Trend analysis	Between 1994 to 1999 the pass rate hovered in the 50% of the children that wrote matric, the results improved in 2000 reaching their peak in 2003 at 73.3%, when the least number of children wrote. At a glance the pass rate seems to be negatively related to the quantity of learners that wrote. The worst pass performance of 47.4% was in the year when the most number of pupils wrote matric. This then should signal that with a gross enrolment rate of close to 1, the shift should be on improving quality rather than access.

SENIOR CERTIFICATE PASSES

Definition	Number of people who passed the senior certificate examination as a percentage of those that wrote the examinations
Data source	Department of Basic Education

44 NUMBER OF CANDIDATES FOR THE NATIONAL SENIOR CERTIFICATE EXAMINATIONS WITH MATHEMATICS PASSES

Goal	To increase the number of National Senior Certificate passes with mathematics
------	-------------------------------------------------------------------------------

Trend analysis	After the initial huge improvement in Mathematic passes between 2001 and 2003, the rate of improvement is not that impressive. Between 2008 and 2009 mathematic passes even decreased, but this too could be related to the fact that less children wrote matric in 2009 than in 2008, sample was smaller. However for South Africa to be competitive at a global level there is a need to focus on improving the quality of education and of the maths outcomes in particular. This increase in passes will go a long way in feeding the Higher education institutions with quality learners and thus accelerate the reduction in the skills shortage.

MATRICULANTS WITH MATHEMATICS PASSES

MATHEMATICS AND MATHEMATICS LITERACY

Definition	Total number of matriculants who passed mathematics on the higher grade and standard grade
Data source	Department of Education

45 ADULT LITERACY RATE

Goal	To reduce the illiteracy rate by 50 per cent between 1990 and 2015 in line with the education for all and MDGs target
------	-----------------------------------------------------------------------------------------------------------------------

Trend analysis	From 2002 literacy levels have been increasing steadily. However after being at par with the average in 2007, female literacy fell below average again. However the fact that over a quarter of the population is unable to read and write is a blight for a middle income country such as South Africa. This is one of the extremely negative apartheid legacies and thus access to Adult literacy programmes such as Kgarikgude should be widened and the implementation of the programme accelerated in view of the huge socio-economic benefits associated with literacy.
----------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

ADULT LITERACY RATE

	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008

Female literacy - OHS	67.2%		67.6%	67.2%	67.4%									
Illiteracy	30.4%	100.0%	30.7%	31.3%	31.0%			29.3%	27.4%	26.7%	25.8%	25.6%	25.9%	23.5%

ADULT LITERACY RATE

Definition	The number of people in a country who can read and write as percentage of total population. In the data obtained from the General and October household surveys a literate adult is defined as a person 20 years and older who has achieved at least seven years of education (i.e passed grade 7)
Data source	Statistics SA's various October Household Surveys (OHS) and General Household Surveys (GHS)

46 GRADUATING SCIENCE ENGINEERING AND TECHNOLOGY (SET) STUDENTS

Goal	To increase the percentage graduating student that are qualifying in the SET disciplines
------	------------------------------------------------------------------------------------------

Trend analysis	The increase in the number of students graduating in the sciences, engineering and technology fields is welcomed especially if viewed against countries that exhibit high and sustained growth rates such as South Korea that have over 50% of graduates being in the SET fields. It is these fields that will anchor the new growth path.
----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

GRADUATING SET STUDENTS

Definition	Percentage of university graduates with degrees in SET (Science Engineering and Technology)
Data source	Department of Education Higher Education Management Information System

47 EDUCATIONAL PERFORMANCE

Goal	To improve quality of education
------	---------------------------------

Trend analysis	This does not show a good picture. The system fails the children as early as grade 3, whereby even in the best performing province, the Western Cape, less than 50% of grade 3 learners are at the level they should be. Serious effort should be put into improving quality of outcomes, if the skills shortage which is a stranglehold to growth and achieving greater equity is to be overcome. There is some improvement though between 2001 and 2007 in literacy achievements of grade 3 meaning the existing interventions are working and should be strengthened in line with the new ones dictated by the outcomes approach. The grade 6 picture is even more dire, with special attention needed for schools in general but even more so for Mpumalanga and the Eastern Cape.
----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

GRADE 6 LANGUAGE AND MATHEMATICS OVERALL ACHIEVEMENT

GRADE 3 LITERACY AND NUMERACY OVERALL ACHIEVEMENT

Definition	Achieved means achieved the minimum required level for a Grade 6 learner to function effectively
Data source	Human Science Research Council (HSRC), Department of Basic Education

48 MATHEMATICS AND SCIENCE ACHIEVEMENT

Goal	To increase the percentage graduating student that are qualifying in the SET disciplines
------	------------------------------------------------------------------------------------------

Trend analysis	No matter what index is used South Africa performs poorly in maths and science scores albeit there is a slight improvement in science scores. There is still a huge provincial discrepancy with the provinces that inherited the most former homelands performing the worst.
----------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Definition	International mathematics achievement and South Africa's performance in relation to the other participating countries Ex DET means ex-Department of Education and Training schools Ex HoR means ex- House of Representatives schools Ex HoD means ex- House of Delegates schools Ex HoA means ex- House of Assembly schools Presently, the racial profiles of learners in the ex-HoR, ex-HoD and ex-HoA schools indicates that there is a racial integration, and that in ex-DET schools the learner population is essentially African
Data source	TIMSS 2003

49 STRENGTH OF CIVIL SOCIETY

Goal	To achieve participation of citizens in civil-society organisations
------	---------------------------------------------------------------------

Trend analysis	If the strength of civil society is measured by belonging to some voluntary organisation then South Africa not only compares well with other middle/emerging income countries but exhibits a strong sense of belonging and ability to ensure accountability of the state to its people. It also means that it becomes easier for local government to drive the participatory mandate without needing to create "new participatory forums"
----------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

SA MEMBERSHIP OF VOLUNTARY ORGANIZATIONS

Data note	The percentages in columns do not add up to 100 per cent as respondents could indicate that they were "active members or belong to" more than one organisation. The next wave of the WVS is in 2010-2011
Data source	World Values Survey, University of Stellenbosch, 2006; www.wvsevsdb.com/wvs, 2010

50 VOTER PARTICIPATION

Goal	To promote high levels of participation of citizens in the democratic electoral process
------	-----------------------------------------------------------------------------------------

Trend analysis	Voter participation will not reach the heights of 1999 whereby over 89% of registered voters, voted. The reason for the "creeping apathy" is attributed by researchers to the fact that there is no real alternative presented by the opposition parties to the ruling party's policies. On the other hand the dominance of the ruling party could mean that there will be people who will feel alienated and homeless. Another explanation could be that South Africa is reaching political maturity and like in all mature democracies voter turnout will be low. The lower rates of participation in local elections is typical of many local elections; it is a global phenomena.

Definition	Total population of at least 18 years of age (prisoners voted in 1999 and 2004 but not in the local government elections of 2000 & 2006)
Data source	Report on the National & Provincial Elections 1999/2004 2006 Independent Electoral Commission (IEC) Annual Report www.election.org.za

52 PERCENTAGE OF WOMEN WHO ARE MEMBERS OF LEGISLATIVE BODIES

Goal	To increase the participation and representation of women in legislative bodies
------	---------------------------------------------------------------------------------

Trend analysis	There is a vast improvement in the representation of women in all three tiers of government. Overall representation rose from 27.8% in 1994 to 43.3% in 2009. Even the province that had the lowest representation in 1994, KZN with 13.6% representation, stood at 37.5% in 2009. Indeed in the 2009 elections, all provinces met the SADC 1997 Gender and Development commitment of ensuring women in politics and decision making representative target of 30%. There however is clamour from civil society for an even better representation at 50%. Those voices want that 50% gender representation to be enshrined in legislation.

53 CONFIDENT IN A HAPPY FUTURE FOR ALL RACES

Goal	To promote social cohesion and eliminate racism while building the nation
------	---------------------------------------------------------------------------

Trend analysis	It is interesting to note that at all periods surveyed over 50% of all races are confident in a happy future. The decline in happiness coincides with the onset of the global financial and economic crisis that led to a recession occurring in South Africa for the first time after decades of growth and boom. The lowest points were in 2008/09 where negative growth of -1.8% was experienced. South Africa emerged from the recession in the third quarter of 2009 and the confidence in the happy future for all races began to rise as well from 60% to about 66%.
----------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

CONFIDENT IN A HAPPY FUTURE FOR ALL RACES

	2000		2001		2002		2003		2004		2005		2006		2007		2008		2009		2010

CONFIDENT IN A HAPPY FUTURE FOR ALL RACES

Definition	Proportion of South Africa's adult population who express confidence in a happy future for all races
Data source	Government Communication and Information System (GCIS) based on Markinor data
Data note	Markinor's regular surveys based on a national sample of 3 300 conducted twice a year in two parts namely the Government Performance Barometer (GPB) and Socio Political Trends (SPT). In questions using a Likert (five point) scale the two positive answers are combined ("very/fairly well" or "very/fairly confident"). Field work for this survey is normally done during April /May and Oct/Nov of each year.

54 PUBLIC OPINION ON RACE RELATIONS

Goal	To promote social cohesion and eliminate racism while building the nation
------	---------------------------------------------------------------------------

Trend analysis	Post the height of good race relations in 2000, according to this survey the number of people who are of the opinion that race relations are improving has hovered around 50 to 60% of the population. This could be signalling an urgent need for a sustainable nation building exercise that will focus primarily in bringing the races closer thus building towards a non racial, non sexist society; united in its diversity.
----------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

PUBLIC OPINION ON RACE RELATIONS

	2000		2001		2002		2003		2004		2005		2006		2007		2008		2009		2010

PUBLIC OPINION ON RACE RELATIONS

Definition	Number of those who were of the opinion that race relations are improving expressed as a proportion of the total population
Data source	Government Communication and Information System (GCIS) based on Markinor data
Data note	Markinor's regular surveys based on a national sample of 3 300 conducted twice a year in two parts namely the Government Performance Barometer (GPB) and Socio Political Trends (SPT). In questions using a Likert (five point) scale the two positive answers are combined ("very/fairly well" or "very/fairly confident"). Field work for this survey is normally done during April /May and Oct/Nov of each year.

55 COUNTRY GOING IN THE RIGHT DIRECTION

Goal	To promote social cohesion and eliminate racism while building the nation
Trend analysis	From the early years of 1994 when 76% felt we are going the right direction, fewer people are feeling South Africa is heading in the right direction, even the hype of the FIFA world cup was not able to bring back people's optimism to the height of 1994 according to the survey.

COUNTRY GOING IN THE RIGHT DIRECTION

	Year 1		Year 2		Year 3		Year 4		Year 5	
1994-1999	76.0	62.0	49.0	66.0	57.0	56.0			43.0	48.0
1999-2004	66.0	60.0	56.0	41.0	48.8	47.5	42.8	47.8	51.8	54.0
2004-2009	73.5	67.6	67.5	65.0	69.0	50.5	59.6	54.3	45.5	38.4
2009-2014	42.8	56.4	55.3							

COUNTRY GOING IN THE RIGHT DIRECTION

Definition	Proportion of SA adult population who feel the country is going in the right direction
Data source	Government Communication and Information System (GCIS) based on Markinor data
Data note	Markinor's regular surveys, based on a national sample of 3 300, conducted twice a year in two parts namely the Government Performance Barometer (GPB) and Socio Political Trends (SPT). In questions using a Likert (five point) scale, the two positive answers are combined ("very/fairly well" or "very/fairly confident"). Field work for this survey is normally done during April /May and Oct/Nov of each year.

56 IDENTITY BASED ON SELF-DESCRIPTION

Goal	To promote social cohesion and national identity.
------	---------------------------------------------------

Trend analysis	There has been a marked increase in the number of people who see themselves as Africans from 18.4% to 30.2%. This could be linked to increased immigration from the rest of the continent. The proportion of people who identify themselves as South African has remained more or less constant. In South Africa only about half of people see themselves as South Africans 16 years after universal voting rights were bestowed in the entire populace.
----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

HOW SOUTH AFRICANS DESCRIBE THEMSELVES (SELF-DESCRIPTION)

	2004	2007	2008	2009
As an African	18.4	25.8	32.6	30.2
As South African	52.8	52.6	45.7	54.1
By race group	4.1	9.9	11.3	7.1
By language group	13.6	2.6	3.1	1.9
Rest of self descriptors	11.1	9.1	7.3	6.7

SELF-DESCRIPTION

Definition	Proportion of South Africa's adult population who express confidence in a happy future for all races
Data source	Government Communication and Information System (GCIS) based on Markinor data
Data note	In 2007 there were more categories included compared to 2004 but given that the figure is not very high they have been grouped under "rest of self-descriptors" including "uncertain/don't know" category

57 PRIDE IN BEING SOUTH AFRICAN

Goal	To promote social cohesion and national identity.
------	---------------------------------------------------

Trend analysis	This shows some relationship to the economic cycle. During the boom years pride was at its highest (90%) and lowest at the height of the economic crises (66%). However at all times about 2/3 of the populace and more were proud of being South African.
----------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

PRIDE IN BEING SOUTH AFRICAN

	%	2003	2004	2005	2006	2007	2008	2009
Pride in being South African		84	90	90	90	78	65	75

PRIDE IN BEING SOUTH AFRICAN

Definition	Percentage of those surveyed who take pride to be South African
Data source	Government Communications' (GCIS) National Tracker Survey
Data note	The GCIS tracker survey is conducted on a weekly basis and results presented on a quarterly basis. The survey has a cumulative sample of 3 800 respondents per year.

58 VICTIMS OF CRIME

Goal	To reduce the level of crime
------	------------------------------

Trend analysis	The general estimate that crime is on the decrease for all periods and for all types of crime is substantiated by the decrease in the percentage of adults who experience crime (except car theft, and fraud). However the fact that almost a quarter of all South African adults in all three polling periods have experienced some crime is not acceptable.
----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

ADULT SOUTH AFRICANS WHO EXPERIENCED CRIME

%	1998	2003	2007	Percentage changes 2007/1998	Percentage changes 2007/2003

Data source	Institute for Security Studies, National victims of crime survey, Overview of key findings, December 2008
Data note	* Data unavailable

59 NUMBER OF ALL CRIMES

Goal	To reduce the level of crime
Trend analysis	Even though there may be debates about the accuracy of the statistics, the general estimate is that crime incidence though still high is on the decrease for all periods and for all types of crime. This could suggest that crime prevention strategies and other strategies that aim to deal with crime are working; strategies such as additional funding for the police force, expanding police staffing levels by almost 90,000, increased visible policing etc.

ALL CRIMES RATE - PER 100 000 OF POPULATION

	1994/95	1995/96	1996/97	1997/98	1998/99	1999/00	2000/01	2001/02	2002/03	2003/04	2004/05	2005/6	2006/07	2007/08	2008/09	2009/10

ALL CRIMES

Definition	All crime refers to serious crimes reported and recorded by police
Data source	South African Police Service (SAPS) annual reports and Crime Statistics
Data note	The graph is based on change-over-time series using 1994/95 as base year for calculating change over time, while the table uses ratio of crimes committed per 100 000 of the population.

60 CONTACT CRIME

Goal	To reduce contact crime by 7-10% p.a. with the major focus being on crime prevention, integrated law-enforcement operations and the reduction of repeat offending.
Trend analysis	Murder rate (a statistic that is fairly accurate) has declined steadily, but at 37.3%/100000, it rate is still too high, and so are the rates for the rest of the contact crimes. It is especially disheartening to note that the rate of decline of all the other crimes is not as quick as it is desirable. Research links the high levels of crime to the high levels of inequality. So other preventative measures may lie beyond the scope of justice and security interventions.

CONTACT CRIME RATE - PER 100 000 OF POPULATION

	1994/95	1995/96	1996/97	1997/98	1998/99	1999/00	2000/01	2001/02	2002/03	2003/04	2004/05	2005/6	2006/7	2007/8	2008/09	200/10

Data note	The table uses ratio of crimes committed per 100 000 of the population

61 PROPERTY CRIME

Goal	To reduce the levels of property crime
------	----------------------------------------

Trend analysis	There has been a decrease in the incidence of burglaries. This could be because of the increased effectiveness of preventative measures put in place such as increased visible policing, investment by private individuals in increased security etc. The unintended consequence of the success in reduction of property crime is the increase in the brutality of the act. In addition, public security forces need to perform better such that even the poor who are unable to provide private security for themselves are not left to the mercy of criminals.

PROPERTY CRIME

Definition	Ratio of property crimes per 100 000 of the population
Data source	Property crimes reported and recorded by police
Data note	The graph is based on change-over-time series using 1994/95 as base year for calculating change over time while the table uses ratio of crimes committed per 100 000 of the population

62 AGGRAVATED ROBBERIES

Goal	To reduce level of aggravated robberies
------	-----------------------------------------

Trend analysis	In spite of increased visible policing and other crime prevention strategies implemented by police, serious robberies are on the increase. This contributes to reduce South Africa's global competitiveness and negates South Africa's nation building efforts. Effort must be stepped up by the security forces to render South Africa a safe country.

Data note	The graph is based on change-over-time series using 2001 as base year for calculating change over time while the table uses ratio of crimes committed per 100 000 of the population

63 DETECTION RATE

Goal	To improve the effectiveness of the criminal justice system
------	-------------------------------------------------------------

Trend analysis	Other than for firearms, drugs and alcohol as well as contact crime, detection rates are below 50%. Even within the contact crime category aggravated robbery, murder and common robbery have extremely low detection rates. Hopefully with the work instituted to transform the criminal justice system, the detection rates will improve.
----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

DETECTION RATE FOR ALL CRIMES

	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07	2007/08	2008/09

Definition	Detection rate = (total number of charges referred to court - (withdrawn before court + charges closed as unfounded)) / number of charges investigated
Data source	South African Police Service annual reports. Data for 2008/09 not yet available
Data note	Since 2007/08 information on crime statistics as well as indicators 59 and 60 are being drawn simultaneously from the Crime Administration System. The data for 2006/07 as published in the 'Development indicators 2008' will differ slightly from the 2007/2008 annual report information where the 2007/2008 data are compared with the revised 2006/2007 data

64 CHARGES REFERRED TO COURT

Goal	To improve the effectiveness of the criminal justice system
------	-------------------------------------------------------------

Trend analysis	Throughout the reporting period many crimes remain unresolved. There has been an improvement in court referrals with firearms, drugs and alcohol related crime referrals rising from over 80% in 2004 to 94% in 2008/09. Much more work needs to be done, if on average only 34% of crimes are referred to court.

Definition	Charges referred to court by the SAPS
Data source	SAPS annual reports
Data note	Note that the published total number of complaints (Indicator 60) is not the same as the published number of cases in court provided in Indicator 61. The Department of Justice and Constitutional Development indicated that this is due to the different dates at which the data was extracted from their information system. Since 2007/08 information on crime statistics as well as indicators 59 and 60 are being drawn simultaneously from the Crime Administration System. The data for 2006/07 as published in the 'Development indicators 2008' will differ slightly from the 2007/2008 annual report information where the 2007/2008 data are compared with the revised 2006/2007 data. Data for 2009/10 not yet available

65 CONVICTION RATE

Goal	To improve the effectiveness of the criminal justice system
------	-------------------------------------------------------------

Trend analysis	The number of crimes reported decreased by 18% in the reporting period, and referrals improved by 21%. Of those referred, conviction rates are high and increasing from 81.5% in 2002 to 88.6% in 2008.

66 TOTAL NUMBER OF INMATES

Goal	To provide effective rehabilitation of offenders
------	--------------------------------------------------

Trend analysis	The number of detainees is increasing, meaning more detainees are coming in than being released. Most sentenced detainees are serving lengthy sentences and thus the number of inmates will always increase until the causes of crime are dealt with holistically.
----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

PRISON DETAINEES

Definition	Number of inmates in South African prisons both sentence and unsentenced
Data source	Department of Correctional Services Annual Report and personal communication

67 ROAD ACCIDENTS

Goal	To reduce the number of road accidents and fatalities by 5% on a year-on-year basis
------	-------------------------------------------------------------------------------------

Trend analysis	Registered motorised vehicles have almost doubled since 1994, and whilst the road accidents as a percentage of registered motor vehicles have not risen, the number of accidents has increased and so have road fatalities. One death is one too many. The decrease in the road traffic offence index is laudable.
----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

ROAD ACCIDENTS AND FATALITIES

	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

68 PEACE OPERATIONS

Goal	To promote peace security and stability in the region and continent
Trend analysis	Deployment of South Africa National Defence Force in other countries in Africa is a clear indication of the South African government commitment to peace and stability in Africa. As conflicts in Africa decrease (the number of major conflicts has decreased from 8 in 2000 to 4 in 2009), so will deployment of peacekeeping forces in Africa and increasingly the thrust could be towards post conflict reconstruction.

OTHER PEACE OPERATIONS								2	2	3	2

Definition	Peacekeeping incorporates a complex model of many elements such as military police and civilians working together to help lay foundations of a sustainable peace with the purpose to maintain ceasefires implementation of comprehensive peace settlements and the protection of humanitarian operations (Chapter VI of the United Nations Charter). Tasks such as the protection of civilians in imminent threat of physical violence are mandated under Chapter VII of the United Nations Charter
Data source	Department of Defense - Joint Operations Division
Data note	The data that have been provided reflects the maximum number of personnel that were deployed in the specific peacekeeping operations during the specific year. Other peace operation includes special envoys in Burundi Sudan and Uganda

69 DEMOCRATICALLY ELECTED GOVERNMENTS IN AFRICA

Goal	To contribute towards a peaceful democratic African continent which contributes to a world that is just and equitable
------	-----------------------------------------------------------------------------------------------------------------------

Trend analysis	In 2009 there was a decline in the number of democratic governments as compared to the 2006-2007. Though 59% of states are democratic, a vast improvement from the 15% of 1991, it is a tragedy that the figure has fallen from 65% in 2006 instead of increasing. This means African leaders and regional bodies need to be more firm in dealing with ascendance to power through military avenues and use peaceful instruments such as sanctions to encourage return to democracy.

70 REAL GDP GROWTH IN AFRICA

Goal	To realise an increase in the GDP growth of the continent to meet millennium development goals (2015)
------	-------------------------------------------------------------------------------------------------------

Trend analysis	After years of stable growth of about 6%, there was a sharp decline on the 2008/09 financial years due to the global economic crises, and the decline in demand and price for exports (minerals, oil, agriculture products). For example the global price for cotton declined by 25% and for coffee by 19% between the first quarter of 2008 and January 2009. Other foreign exchange earners such as tourism were also negatively affected as cancellations grew and this is especially devastating for countries such as Mauritius where tourism accounts for 15% of GDP, However unlike other continents growth remained positive and is on the rise.
----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

REAL GDP GROWTH IN AFRICA

71 SUSTAINABLE TOURISM

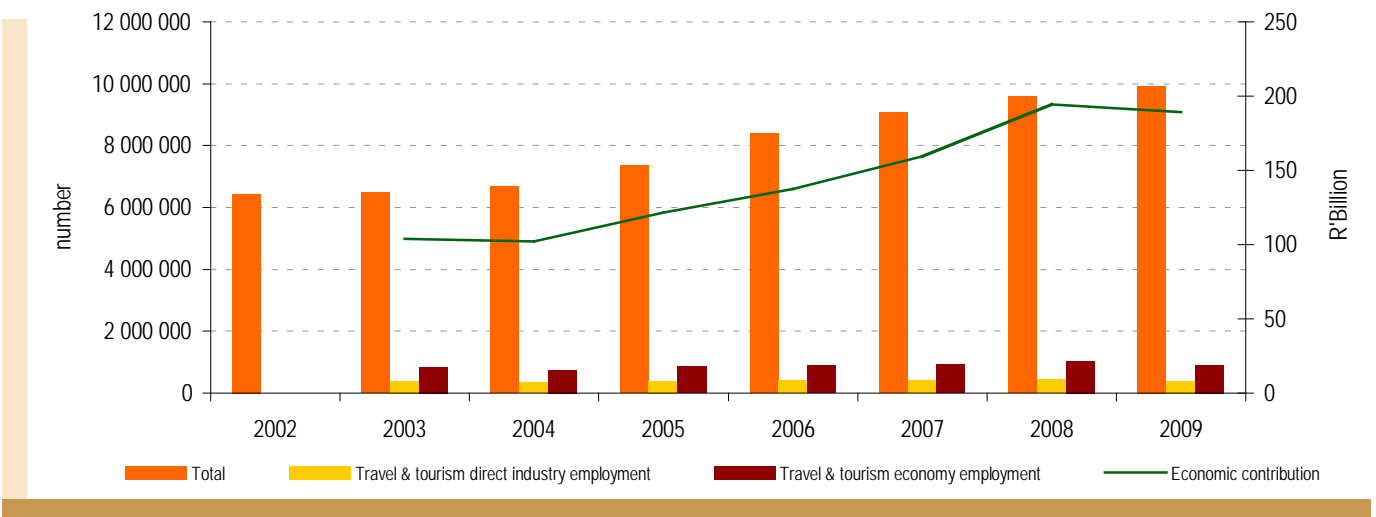

Goal	To increase foreign tourism in South Africa and create conditions for sustainable tourism growth
------	--------------------------------------------------------------------------------------------------

Trend analysis	Tourism has increased, the contributors being mainly tourists from the continent. However whilst the economic contribution has increased from R104 billion rands in 2003 to R189.4 billion in 2009, direct employment has remained constant at 389,000. This means the increase in tourists has not translated in to job creation, this is an anomaly because the tourism industry is normally a labour intensive sector.
----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

TOURISM IN SOUTH AFRICA

Data source	Statistics South Africa WTTC (The 2008 T&T Economic Research): Estimates of direct and indirect employment and contribution to the economy. Statistics SA South Africa Tourism and Department of Tourism
Data note	Sustainable tourism is a positive approach intended to reduce the tensions and friction created by the complex interactions between the tourism industry visitors the environment and the communities which are host to holidaymakers. It is an approach, which involves working for the long-term viability and quality of both natural and human resources. It is not anti-growth but it acknowledges that there are limits to growth

INTERNATIONAL RELATIONS

Bilateral politics and economic relations

Development Indicators

72 MISSION OPERATIONS AND DIPLOMATS TRAINED

Goal	To conduct and co-ordinate South Africa's international relations and promote its foreign-policy objectives. To promote and protect, through bilateral and multilateral interactions, South Africa's national interests and values.
Trend analysis	There is an increase in the number of diplomatic relations forged to date. The number of diplomatic missions opened has increased from 91 in 2001/02 to 124 in 2009/10. The increase has been mainly in Africa in line with governments policy of contributing to the creating a better Africa and a better world. Foreign language training of cadets and diplomats has also increased from 44 in 2004 to 747 in 2009.

73 AGREEMENTS

Goal	To conduct and co-ordinate South Africa's international relations and promote its foreign policy objectives
------	-------------------------------------------------------------------------------------------------------------

Trend analysis	The number of international agreements has declined in 2009. Indeed as more countries and multilateral institutions already have a formal partnership with South Africa, the number of new agreements signed per year will decrease. Monitoring the implementation of these agreements and the impact including the cross-cutting impact that these agreements have is of the essence.
----------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

74 TAX RETURNS

Goal	To strengthen the revenue-collection capacity of government.
------	--------------------------------------------------------------

Trend analysis	The main contributors to the total revenue of 2009/10 were personal income tax (34%), company income tax (23%), Value Added Tax (25%) and other tax types (19%). Total revenue collected dipped by just over 4% from the previous year. This is attributed to the negative impact of the global financial crisis on the South African economy. This crisis saw the economy contracting by 1.8 percent in 2009 resulting in declining profits, closing of other businesses and shedding of more than 900 000 jobs. Consequently tax revenue declined. If the projected 2.3% economic growth materialises in 2010, then improvement in revenue collection should be expected in 2010/11.

75 AUDITS

Goal	To promote prudent and responsible use of public resources
------	------------------------------------------------------------

Trend analysis	Overall there has been no improvement in the number of national government departments that received unqualified audit opinions in 2008/09 as compared to 2007/08. The most notable improvement concerns the number of provincial departments, public entities and municipalities where there has been a significant decrease in qualified audit opinions. Despite these positive results, the percentage of municipalities that are receiving qualified audits is still high. Thus a lot of work remains to be done to improve management in government institutions in order to reduce these high percentages. Government intends to achieve a 100% clean audit in local government by 2014.

76 CORRUPTION PERCEPTIONS

Goal	To reduce the levels of corruption in government and in society as whole
------	--------------------------------------------------------------------------

Trend analysis	The 2009 Corruption Perceptions Index (CPI) results continued to show a setback in perception regarding the fight against corruption in South Africa. According to CPI, perceptions about corruption in South Africa have increased between 2007 and 2009, pushing the ranking of South Africa from the 43rd place in 2007 to the 55th in 2009. South Africa's score remained below the midpoint (which is 5) to 4.70. While South Africa's worsening scores are a cause for concern and require urgent attention, it has to be borne in mind that perceptions of corruption alone do not mean that corruption has actually worsened. It could mean, for instance, that more incidents of corruption are being publicly exposed, which increases public awareness about corruption. Various government initiatives aimed at curbing corruption include, amongst amongst others, the establishment of the Inter-ministerial committee on corruption, launching of special anti-corruption units by DPSA and the establishment of tender compliance units by National Treasury.

77 BUDGET TRANSPARENCY

Goal	To ensure transparency in the budgetary process through availing extensive information about the budget to citizens
------	---------------------------------------------------------------------------------------------------------------------

Trend analysis	The Open Budget Index is produced bi-annually. The last issues was produced in 2008 whereby South Africa continued its impressive record. Out of the 78 countries included in the index, South Africa was ranked amongst the top five that provide extensive budgetary information to citizens, which confirms government's commitment to transparency and openness.

78 PUBLIC OPINION: DELIVERY OF BASIC SERVICES

Goal	To improve government's efficiency and effectiveness in providing services to citizens
------	----------------------------------------------------------------------------------------

Trend analysis	Data from the Markinor survey indicate that there has been a general decline in positive public opinions about government's performance in delivering services since November 2006. The decline stabilised somewhat from November 2009, although at lower percentage levels. This decline has coincided with the increase in the number of service delivery protests which have become a new way of expressing frustration with poor service delivery. Previous experience has shown that public opinion about government's performance in delivering basic services tends to become positive during election periods and then decline between election periods. There tends to be better communication about services during elections periods, which then positively affects public perceptions, and weak communication between elections. The slight improvement in May 2009 followed by a sharp decline since November 2009 (which is a time during which the last national and provincial elections took place) attest to this observation. It will be interesting to observe whether the buoyant mood around the 2010 Fifa World Cup will translate into a more positive opinion of government.

PUBLIC OPINION ON DELIVERY OF BASIC SERVICES

Data source	Government Communication and Information System (GCIS) based on Markinor survey data
Data note	Markinor's regular surveys based on a national sample of 3 300 conducted twice a year in two parts namely the Government Performance Barometer (GPB) and Socio Political Trends (SPT). In questions using a Likert (five point) scale the two positive answers are combined ("very/fairly well" or "very/fairly confident")

79 EASE OF DOING BUSINESS

Goal	To improve government's efficiency and effectiveness in attracting investment by creating an environment conducive to business operation
------	------------------------------------------------------------------------------------------------------------------------------------------

Trend analysis	The 2010 Doing Business Index ranked South Africa 34 out of 183 economies, which is a regression from position 32 where South Africa was ranked in 2009. The regression is due to the decline in one critical area that the Doing Business survey considers, which is starting a Business. While starting a business in South Africa scored 45 in the survey in 2009, the score dropped to 67 in 2010. The reason for this sharp fall will need to be investigated.

Definition	The ease of doing business index ranks economies from 1 to 178. The index is calculated as the ranking on the simple average of country percentile rankings on each of the 10 topics covered in Doing Business. The ranking on each topic is the simple average of the percentile rankings on its component indicators

80 GREENHOUSE GAS EMISSIONS

Goal	To reduce green house gas emissions in line with international protocols
------	--------------------------------------------------------------------------

Trend analysis	South Africa's greenhouse gas emissions have been increasing with higher economic growth. South Africa's greenhouse gas emissions per capita are similar to that of industrialised countries 11 tonnes a person a year; this is partly because of SA's strong reliance on coal. To be carbon neutral by 2050, emissions in South Africa need to be one tonne per person per annum. Long-term mitigation scenario projections suggest that this trend may continue for the next few decades if there are no massive interventions. While the trend in respect of emissions per capita shows an increase, it is however worth mentioning that emissions per unit of economic output (GDP) are declining.

GREENHOUSE GAS EMISSIONS

Definition	Six greenhouse gases under the Kyoto Protocol are CO ₂ , CH ₄ , NO ₂ , HFC's, PFC's, SF ₆
Data source	1) 1990& 1994 FROM National Green House Gas inventory, based on SA initial communication under the UNFCC, 2004: 2000 Figure based on 2009 UNFCC and communication with Department of Environmental Affairs 2) 2003-2007 estimates from Long-Term Mitigation Scenarios, Department of Environmental Affairs 3) 2008 onwards, Long-term Mitigation Scenarios model, based on Growth without Constraints scenario 4) Population data from StatsSA 5) GDP data from SA Reserve Bank

DEMOGRAPHIC TRENDS

Trend analysis

Though on average household size has decreased from 4.6 in 1996 to 3.9 in 2007, Eastern Cape and Kwazulu Natal the provinces with the highest poverty incidences and lowest HDI still have the largest household size. The decrease in household size and the increase in population impacts directly on government service delivery programme and government's programme to reduce backlogs. The South African population has increased from about 41 million in 1996 to 50 million in 2007, the annual growth rate declined from 2.1% between 1996 and 2001 to 1.3% for the period 2001 to 2007. This decline can be attributed partly to a decline in fertility rates and partly to an increase in HIV-and AIDS-related mortality. The proportion of South Africa's population who were not born in the country rose from 2.1% in 1996, to about 2.7% in 2007.
