

NOTICE 214 OF 2010**DEPARTMENT OF PUBLIC WORKS
AGRÉMENT SOUTH AFRICA**

(Approval of innovative construction products and systems)

Notice is hereby given that Agrément South Africa has, with effect from 13 May 2009, issued an Agrément certificate, details of which appear in the schedule hereto.

SCHEDULE

Agrément Certificate 2009/360

Name of product: RoadCem Non-traditional soil stabiliser

Certificate holder: Marble Gold 453 (Pty) Ltd

Description:

ROADCEM is a non-traditional soil stabilizer additive for road base construction that is always used with cement. It reacts with cement and bond in-situ soil to produce a needle-like crystalline cementitious matrix. The matrix has good interlock and generates significant improvements in strength, and also allows for more flexibility than in traditional cement based or only cement treated materials. Leaching potential is significantly reduced and in some cases eliminated completely. ROADCEM is manufactured in the Netherlands in compliance with the specification of ISO 9001 and ISO 14002 standards. It is delivered in powder form packed in 25 kg bags. It is available as an optimised proprietary blend (in powder form) or can be blended to suit site specific conditions to ensure the desired results.

RoadCem is spread by hand prior to/during mixing with cement. The contractor depending on the size of the work may want it pre-blended with cement and may request a cement manufacturer to do it. Alternatively the contractor may want to spread it with a separate piece of equipment (farming fertilizer spreader) prior to/during the cement mixing process.

The Agrément certificate contains detailed information on the product and can be accessed at <http://www.agrement.co.za>
