DEPARTMENT OF FORESTRY, FISHERIES AND THE ENVIRONMENT

NO. 747

20 August 2021

NATIONAL ENVIRONMENTAL MANAGEMENT ACT, 1998 (ACT NO. 107 OF 1998)

PUBLICATION OF THE CONSOLIDATED ENVIRONMENTAL IMPLEMENTATION AND MANAGEMENT PLAN 2020/2024 FOR THE DEPARTMENT OF FORESTRY, FISHERIES AND THE ENVIRONMENT, IN TERMS OF SECTION 15(5) OF THE NATIONAL ENVIRONMENTAL MANAGEMENT ACT, 1998

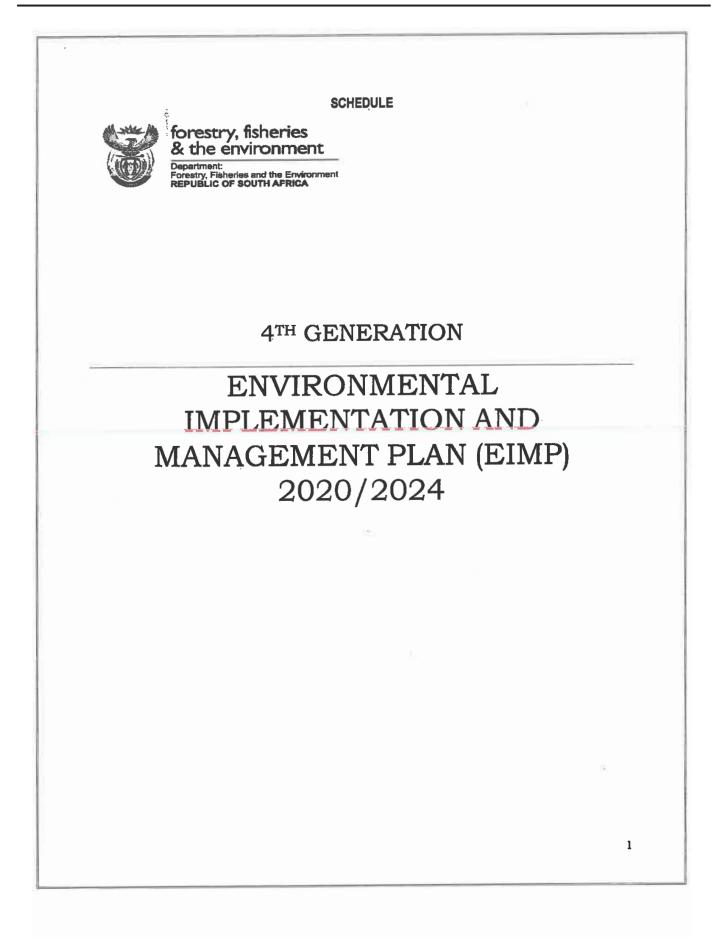

I, Barbara Dallas Creecy, Minister of Forestry, Fisheries and the Environment, hereby publish the consolidated environmental implementation and management plan 2020/2024 for the Department of Forestry, Fisheries and the Environment, in terms of section 15(5) of the National Environmental Management Act, 1998 (Act No. 107 of 1998) for implementation as set out in the Schedule hereto.

The consolidated environmental implementation and management plan 2020/2024 for the Department of Forestry, Fisheries and the Environment can also be accessed at https://www.environment.gov.za/legislation/gazetted_notices.

A hard copy of the document can be viewed in the Department's library located at Environment House, 473 Steve Biko Road, corner Soutpansberg and Steve Biko Road, Arcadia, Pretoria. Alternatively it can be requested from Mr I Daly at Tel.: +27 12 399 9913, or through email: <u>Idaly@environment.gov.za</u>,

This gazette is also available free online at www.gpwonline.co.za

Climate change: the variation in the earth's global climate or in regional climate over time. It includes changes in the variability or in the average state of the atmosphere – or average weather – over timescales ranging from decades to millions of years. Anthropogenic climate change refers to climate change that is attributable directly or indirectly to human activities that alter the composition of the global atmosphere.

Constitution: means the Constitution of the Republic of South Africa, 1996.

Co-operative governance: In South Africa, government is constituted as national, provincial and local spheres of government which are distinctive, interdependent and interrelated. All spheres of government must observe and adhere to the principles in section 41 of the Constitution and must conduct their activities within the parameters that the Chapter provides.

Department: means the national Department of Forestry, Fisheries and the Environment.

Desertification: the degradation of land in arid, semi-arid, and dry sub-humid areas, resulting from various factors including climatic variations and human activities.

Environment: means the surroundings within which humans exist and that are made up of----

- (i) the land, water and atmosphere of the earth;
- (ii) micro-organisms, plant and animal life;
- (iii) any part or combination of (i) and (ii) and the interrelationships among and between them; and
- (iv) the physical, chemical, aesthetic and cultural properties and conditions of the foregoing that influence human health and well-being.

Environmental implementation plan: means a statutory instrument for promoting co-operative governance for environmental management among different spheres of government as envisaged in Chapter 3 of the NEMA.

Environmental management plan: means a statutory instrument for promoting co-operative governance for environmental management among different spheres of government as envisaged in Chapter 3 of the NEMA.

Evaluation: is a time-bound and periodic exercise that seeks to provide credible and useful information to answer specific questions to guide decision making by staff, managers and policy makers.

Governance: the systems of values, policies, and institutions by which society manages its economic, political, and social affairs through interactions within and among the state, civil society, and the private sector.

Indicator: a measure that helps to assess the extent of the success with which goals are being achieved.

Integrated environmental management: a code of practice to ensure that environmental considerations are fully integrated into the management of all activities, so as to achieve a desirable balance between conservation and development as envisaged in chapter 5 of the NEMA.

Minister: means the Minister of Forestry, Fisheries and the Environment.

Monitoring: involves collecting, analysing, and reporting data on inputs, activities, outputs, outcomes and impacts as well as external factors, in a way that supports effective management.

National department: means a department of State within the national sphere of government.

Organ of state: has the meaning assigned to it in section 239 of the Constitution of the Republic of South Africa.

Performance indicator: is a pre-determined signal that a specific point in a process has been reached or result achieved.

Persistent organic pollutants: chemical substances that are toxic, persist in the environment for long periods of time, and bio-accumulate as they move up through the food chain.

Stakeholders: people and/or organizations involved or interested in an area or an issue, for example, residents, councillors, business people, trade unions, government institutions.

Sustainable development: means the integration of social, economic and environmental factors into planning, implementation and decision-making so as to ensure that development serves present and future generations.

I PARCE (NE SEMISTRO)

The 6th government administration presented a shift towards the management and implementation of environmental legislation, projects and programs within the environmental sector. The strategic issues which are job creation, education, health, fighting crime and sustainable development are addressed in this 2020-2024 Environmental Implementation and Environmental Management Plan (EIMP) through programs, policies and legislation. The 2020-2024 EIMP is the Fourth Edition as per the requirements of the National Environmental Management Act, 1998 (Act No. 107 of 1998) (NEMA), Chapter 3. It incorporates commitments from several programs within the Department of Forestry, Fisheries and the Environment (DFFE) namely, Biodiversity and Conservation; Climate Change, Air Quality and Sustainable Development; Chemicals and Waste Management; Regulatory Compliance and Sector Monitoring; Environmental Programs; Oceans and Coasts; Forestry Management and Fisherles Management.

PART A

The environment in South Africa is protected through various legislation breathed by the Constitution of the Republic of South Africa, 1996. The NEMA is an umbrella legislation and it enables various specific environmental management Acts (SEMAs) to specifically address environmental challenges and also to enable the management of the environment. Chapter 3 of NEMA requires the DFFE along with other organs of state that exercise functions that may affect the environment and that perform functions involving the management of the environment to prepare environmental implementation plans (EIPs) and/or environmental management plans (EMPs). Every national department that is listed in both Schedule 1 and Schedule 2 may prepare a consolidated environmental implementation and management plan (EIMP). The DFFE, as both a Schedule 1 and Schedule 2 Department, has a responsibility to compile a plan for a 5-year period on activities, programs and plans that the DFFE foresees to implement in order to protect the environment on behalf of the citizens of South Africa as mandated by the Constitution of the Republic, 1996 as per section 24 stating that:

"Everyone has the right:

& BREADCHERIOF

- (a) to an environment that is not harmful to their health or wellbeing; and
- (b) to have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures that—
- (i) prevent pollution and ecological degradation;
- (ii) promote conservation; and
- (iii) secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development".

Chapter 3 of NEMA outlines the procedures for cooperative governance in South Africa. For good environmental management, cooperative governance is critical in South Africa. EIPs and EMPs are used to monitor and report on activities that have an impact on the environment. Environmental governance refers to the process of decision-making involved in controlling and managing the environment and natural

resources. According to Mngoma et al (2011), the factors that constitute good environmental governance include the following:

- Governance should be responsible and accountable;
- Regulations should be enforced;
- Integrating mechanism and structures that facilitate participation should be established;
- There needs to be inter-ministerial and inter-departmental co-ordination;
- Institutional responsibilities for regulating environmental impacts;
- Promoting resource exploitation should be separate;
- People should have access to information; and
- There need to be institutional and community capacity building.

The principles of cooperative governance include fairness, accountability, transparency and responsibility (Boer, O'Beirne and Greyling 2003:3). Mngoma et al, further emphasises that it is through adherence to the combination of these principles that the true spirit of cooperative governance is realised. Notwithstanding that, the procedures for cooperative governance are not a panacea. Noting the latter, compliance with procedures for cooperative governance as outlined in Chapter 3 of NEMA is necessary, both across and between all spheres of government, if the tide of service delivery is to be maintained.

The First Edition EIMP was published under General Notice No. 354 in Government *Gazette* No. 23232 on 28 March 2002 for the then Department of Environmental Affairs and Tourism for a four year period (2002-2005). The Second Edition EIMP was published under General Notice No. 1138 in Government *Gazette* No. 31415 on the 15 September 2008 for the then Department of Environmental Affairs and Tourism for a fouryear period (2008-2011) and the Third Edition EIMP was published under Government Notice No. 530 in Government *Gazette* No. 39998 on 19 May 2016 for the then Department of Environmental Affairs for a five year period (2015/2020). This therefore marks the Fourth Edition 2020/2024 EIMP since the NEMA came into effect in 1998 for the Department of Forestry, Fisheries and the Environment. The content of this plan is guided by sections 13 and 14 of NEMA and the Environmental Implementation Plans and Environmental Management Plans Guidelines.

In line with the NEMA requirements, the current DFFE EIMP outlines how the DFFE will -

- (a) coordinate and harmonise the environmental policies, plans, programmes and decisions of the DFFE in its exercise of functions that may affect the environment or powers and duties aimed at the achievement, promotion, and protection of a sustainable environment, and of provincial and local spheres of government, in order to –
- (i) minimise the duplication of procedures and functions; and
- (ii) promote consistency in the exercise of functions that may affect the environment;
- (b) give effect to the principle of cooperative government in Chapter 3 of the Constitution;
- (c) secure the protection of the environment across the country as a whole;
- (d) prevent unreasonable actions by provinces in respect of the environment that are prejudicial to the economic or health interests of other provinces or the country as a whole; and
- (e) enable the Minister to monitor the achievement, promotion, and protection of a sustainable environment.

2.1 METHODOLOGY OF EIMP PREPARATION

The development of the EIMP takes various stages and the content of this plan is guided by sections 13 and 14 of NEMA.

Section 13(1) of NEMA requires that every EIP must contain:

- (a) a description of policies, plans and programmes that may significantly affect the environment;
- (b) a description of the manner in which the relevant national department or province will ensure that the policies, plans and programmes referred to in paragraph (a) will comply with the principles set out in section 2 as well as any national norms and standards as envisaged under section 146(2)(b)(i) of the Constitution and set out by the Minister, or by any other Minister, which have as their objective the achievement, promotion, and protection of the environment;
- (c) a description of the manner in which the relevant national department or province will ensure that its functions are exercised so as to ensure compliance with relevant legislative provisions, including the principles set out in section 2, and any national norms and standards envisaged under section

146(2)(b)(i) of the Constitution and set out by the Minister, or by any other Minister, which have as their objective the achievement, promotion, and protection of the environment; and

(d) recommendations for the promotion of the objectives and plans for the implementation of the procedures and regulations referred to in Chapter 5.

Section 14(1) of NEMA requires that every EMP must contain-

- (a) a description of the functions exercised by the relevant department in respect of the environment;
- a description of environmental norms and standards, including norms and standards contemplated in section 146(2)(b)(i) of the Constitution, set or applied by the relevant department;
- a description of the policies, plans and programmes of the relevant department that are designed to ensure compliance with its policies by other organs of state and persons;
- (d) a description of priorities regarding compliance with the relevant department's policies by other organs of state and persons;
- (e) a description of the extent of compliance with the relevant department's policies by other organs of state and persons;
- (f) a description of arrangements for co-operation with other national departments and spheres of government, including any existing or proposed memoranda of understanding entered into, or delegation or assignment of powers to other organs of state, with a bearing on environmental management; and
- (g) proposals for the promotion of the objectives and plans for the implementation of the procedures and regulations referred to in Chapter 5.

The DFFE 2020/2024 Environmental Implementation Plan and Environmental Management Plan (EIMP) was developed using the established guidelines for preparation of environmental implementation plans and environmental management plans (2013).

2.2 OVERVIEW OF DFFE

The DFFE's vision is to attain "a prosperous and equitable society living in harmony with our natural resources". This is achieved through (mission) provision of leadership in environmental management, conservation and protection towards sustainability for the benefit of South Africans and the global community.

Moreover, the DFFE operates under the following values:

Driven by our **Passion** as custodians and ambassadors of the environment we have to be **Proactive** and foster innovative thinking and solutions to environmental management premised on a **People-centric** approach that recognises the centrality of Batho Pele, for it is when we put our people first that we will serve with **Integrity**, an important ingredient in a high **Performance driven** organisation such as ours.

2.2.1 CONSTITUTIONAL AND LEGAL MANDATE

The mandate and core business of the DFFE is to realise sound environmental management that is underpinned by the Constitution and all other relevant legislation and policies applicable to government, including the Batho Pele White Paper. In pursuance of this mandate policies, legislation and Regulations have been enacted to give effect to the environmental rights of all South Africans as enshrined in section 24 of the Constitution, which provides that everyone has the right to (a) an environment that is not harmful to their health or well-being; and (b) have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures that:

- (a) prevent pollution and ecological degradation;
- (b) promote conservation; and
- (c) secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development.

In the context of this constitutional right, policies, legislation and Regulations have been enacted in the form of overarching and enabling integrated environmental management (IEM) legislation which further provides for subsidiary, issue specific legislation, called specific environmental management Acts (SEMAs), on

biodiversity and conservation resources; protected areas; oceans and coasts; climate change and air quality management; and chemicals and waste management. Below is the table showing the DFFE programmes.

Table 1: Showing the DFFE's programmes

No	Programme	Function
1	Biodiversity and Conservation	Ensure the regulation and management of all biodiversity, heritage and conservation matters in a manner that facilitates sustainable economic growth and development.
2	Climate change, Air Quality and Sustainable Development	Lead, promote, facilitate, inform, monitor and review the mainstreaming of environmental sustainability, low carbon and climate resillence and air quality in South Africa's transition to sustainable development
3	Chemicals and Waste Management	Manage and ensure that chemicals and waste management policies and legislation are implemented and enforced in compliance with chemicals and waste management authorisations, directives and agreements.
4	Regulatory Compliance and Sector Monitoring	Promote the development of an enabling legal regime and licensing authorisation system that will promote enforcement and compliance and ensure coordination of sector performance.
5	Environmental Programmes	Implement the expanded public works programme and green economy projects in the environmental sector.
6	Oceans and Coasts	Promote, manage and provide strategic leadership on oceans and coastal conservation.
7	Administration	Provide strategic leadership, management and support services to the DFFE
8	Forestry	Develop and facilitate the implementation of policles and targeted programme to ensure management of forests, sustainable use and protection of land and water as well as managing agricultural risks and disaster
9	Fisheries	Ensure the sustainability utilisation and orderly access to the marine living resources through improved management and regulation

In addition to the aforementioned programmes, there are four national public entities which report to DFFE and which have either legislated environmental responsibilities or delegated ones. These entities are hereunder listed and described.

South African National Biodiversity Institute (SANBI) – The SANBI is established in terms of section 10 of the National Environmental Management: Biodiversity Act, 2004 (Act No. 10 of 2004) (NEM: BA) and, among other things, leads and coordinates research, and monitors and reports on the status of biodiversity

in South Africa. SANBI provides knowledge and information, gives planning and policy advice and pilot bestpractice management models in partnership with stakeholders. SANBI also engages in ecosystem restoration and rehabilitation, leads the human capital development strategy of the sector and manages the national botanical gardens as 'windows' to South Africa's biodiversity for enjoyment and education.

South African National Parks (SANParks) – The SANParks was established by section 5 of the National Parks Act, 1976 (Act No. 57 of 1976) and continues to exist in terms of section 54 of the National Environmental Management: Protected Areas Act, 2003 (Act No. 57 of 2003) (NEM: PAA). SANParks manages a system of national parks which represents the indigenous fauna, flora, landscapes and associated cultural heritage of the country. Of all the 22 national parks, most have overnight tourist facilities, with an unrivalled variety of accommodation in arid, coastal, mountain and bushveld habitats.

South African Weather Services (SAWS) – The South African Weather Service (SAWS) is a public entity governed by a Board of Directors. The company became a public entity on 15 July 2001 in terms of section 2 of the South African Weather Service Act, 2001 (Act No. 8 of 2001). It is an authoritative voice for weather and climate forecasting In South Africa and as a member of the World Meteorological Organization (WMO) it complies with international meteorological standards. As an Aviation Meteorological Authority, SAWS is designated by the state to provide weather services to the aviation industry, marine and a range of other identified clients and to fulfil a range of international obligations of the government. The entity provides two distinct services, namely public good services that are funded by government, and paid-for commercial services.

iSimangaliso Wetland Park Authority – The iSimangaliso Wetland Park Authority is established in terms of section 9 of the World Heritage Convention Act, 1999 (Act No. 49 of 1999) to manage the iSimangliso Wetland Park World Heritage Site in accordance with the requirements of the World Heritage Convention Act, 1999 (Act No. 49 of 1999).

2.2.1.1 ACTS OF PARLIAMENT

The National Environmental Management Act, 1998 (Act No. 107 of 1998) (NEMA) provides for cooperative environmental governance by establishing principles for decision making on matters affecting the environment, institutions that will promote cooperative governance and procedures for co-ordinating environmental functions exercised by organs of state; and provides for certain aspects of the administration and enforcement of other environmental management laws.

Environment Conservation Act, 1989 (Act No. 73 of 1989) provides for the effective protection and controlled utilization of the environment and for matters incidental thereto. This Act has been largely repealed and replaced by the National Environmental Management Act, 1998 (Act No. 107 of 1998). There are however still a number of provisions which are still in operation.

BIODIVERSITY AND CONSERVATION

The World Heritage Convention Act, 1999 (Act No. 49 of 1999) (WHCA) provides for the incorporation of the World Heritage Convention into South African law, the enforcement and implementation of the World Heritage Convention in South Africa, the recognition and establishment of world heritage sites, the establishment of Authorities and the granting of additional powers to existing organs of state; the powers and duties of such Authorities, especially those safeguarding the integrity of world heritage sites; where appropriate the establishment of boards and executive staff components of the Authorities; integrated management plans in respect of world heritage sites; land matters in relation to world heritage sites; and financial, auditing and reporting controls over the Authorities.

The National Environmental Management: Biodiversity Act, 2004 (Act No. 10 of 2004) (NEM: BA) significantly reforms South Africa's laws regulating biodiversity. It provides for the management and conservation of South Africa's biodiversity within the framework of NEMA. It sets out the mechanisms for managing and conserving South Africa's biodiversity and its components; provide for the protection of species and ecosystems that warrant national protection; the sustainable use of indigenous biological resources; the fair and equitable sharing of benefits arising from bioprospecting involving indigenous biological resources; and the establishment and functions of the South Africa National Biodiversity institute.

The National Environmental Management: Protected Areas Act, 2003 (Act No. 57 of 2003) (NEM: PAA) provides for the protection and conservation of ecologically viable areas representative of South Africa's biological diversity and its natural landscapes and seascapes. It further provides for the establishment of a national register of all national, provincial and local protected areas; for the management of those areas in accordance with national norms and standards; for intergovernmental co-operation and public consultation in matters concerning protected areas; for the continued existence, governance and functions of South African National Parks.

FISHERIES, OCEANS AND COASTAL ENVIRONMENTAL MANAGEMENT

The National Environmental Management: Integrated Coastal Management Act, 2008 (Act No. 24 of 2008) (NEM: ICMA) establishes a system of integrated coastal and estuarine management in the Republic, including norms, standards and policies, in order to promote the conservation of the coastal environment and to maintain the natural attributes of coastal landscapes and seascapes; ensures that development and the use of natural resources within the coastal zone is socially and economically justifiable and ecologically sustainable; defines the rights and duties in relation to coastal areas; determines the responsibilities of organs of state in relation to coastal areas; prohibits incineration at sea; controls dumping at sea, pollution in the coastal zone, inappropriate development of the coastal environment and other adverse effects on the coastal environment; and gives effect to South Africa's international obligations in relation to coastal matters.

The Sea Shores Act, 1935, (Act No. 21 of 1935) declares the President to be the owner of the sea-shore and the sea within South Africa's territorial water and provide for the granting of rights and alienation of portions thereof. This Act has been repealed by the National Environmental Management: Integrated Coastal Management Act, 2008 (Act No. 24 of 2008) to the extent that it has not been assigned to the provinces.

The Sea Birds and Seals Protection Act, 1973 (Act No. 46 of 1973) provides for the control over certain islands and rocks; for the protection, conservation, and the control of the capture and killing of sea birds and seals; and for the disposal of the products of sea birds and seals.

Sea Fishery Acts 1988 (Act No. 12 of 1988) provides for the conservation of the marine ecology and the orderly exploitation, utilization and protection of certain marine resources; for that purpose, to provide for the exercise of control over sea fishery; and to provide for matters connected therewith.

The Antarctic Treaties Act, 1996 (Act No. 60 of 1996) provides for the implementation of certain treaties relating to Antarctica. The treaty is primarily concerned with the regulation of activities in Antarctica, including territorial claims, research and strict environmental protection in general and the protection of certain identified species such as seals.

The Marine Living Resources Act, 1998 (Act No. 18 of 1998) (MLRA) provides for the conservation of the marine ecosystem, the long-term sustainable utilisation of marine living resources and the orderly access to exploitation, utilisation and protection of certain marine living resources; and for these purposes provide for the exercise of control over marine living resources in a fair and equitable manner to the benefit of all the citizens of South Africa.

Marine Spatial Planning Act, 2018 (Act No. 16 of 2018) provides a framework for marine spatial planning in South Africa; provides for the development of marine spatial plans; provides for institutional arrangements for the implementation of marine spatial plans and governance of the use of the ocean by multiple sectors; and provides for matters connected therewith.

The Prince Edward Islands Act, 1948 (Act No. 43 of 1948) provides for the confirmation of the annexation to the Union of South Africa of the Prince Edward Islands, and for the administration, government and control of the said islands.

AIR QUALITY MANAGEMENT

The National Environmental Management: Air Quality Act, 2004 (Act No.39 of 2004) (NEM: AQA) reforms the law regulating air quality in order to protect the environment by providing reasonable measures for the prevention of pollution and ecological degradation and for securing ecologically sustainable development while promoting justifiable economic and social development; to provide for national norms and

standards regulating air quality monitoring, management and control by all spheres of government; for specific air quality measures; and for matters incidental thereto.

South African Weather Service Act, 2001 (Act No. 8 of 2001) establishes a juristic person to be known as the South African Weather Service; determines its objects, functions and method of work; prescribes the manner in which it is to be managed and governed; regulates its staff matters and financial affairs; and provide for matters connected therewith.

WASTE MANAGEMENT

The National Environmental Management: Waste Act, 2008 (Act No. 59 of 2008) (NEM: WA) reforms the law regulating waste management in order to protect health and the environment by providing reasonable measures for the prevention of pollution and ecological degradation and for securing ecologically sustainable development; provides for institutional arrangements and planning matters, provides for national norms and standards for regulating the management of waste by all spheres of government; specific waste management measures; licensing and control of waste management activities; remediation of contaminated land; the national waste information system and to furthermore provide for compliance and enforcement.

FORESTRY MANAGEMENT

The National Forests Act, 1998 (Act No. 84 of 1998) (NFA) promotes the sustainable management and development of forests for the benefit of all; creates the conditions necessary to restructure forestry in state forests; provide special measures for the protection of certain forests and trees; promote the sustainable use of forests for environmental, economic, educational, recreational, cultural, health and spiritual purposes; promote community forestry; and promote greater participation in all aspects of forestry and the forest products industry by persons disadvantaged by unfair discrimination.

The National Veld and Forest Fire Act, 1998 (Act No. 101 of 1998) (NVFFA) makes provisions for the prevention, combatting and management of veld, forest and mountain fires throughout the Republic of South Africa.

Management of State Forests Act, 1992 (Act No. 128 of 1992) provides for the management of and control over State forests by a company to be established; and for matters connected therewith.

2.2.2 LINKS TO GOVERNMENT PRIORITIES

This 4TH edition EIMP falls within the sixth government administration and priorities thereof. Below are the priorities of government as announced by the President of the Republic of South Africa and how DFFE will align itself in order to realize them.

Table 2: Showing government priorities and DFFE response/alignment to the priorities

Economic transformation and job creation	 Implementation of the Government's Expanded Public Works Programme (EPWP) for the Environment Sector. The DFFE has projected that it will create 359 568 work opportunities through implementation of labour intensive environmental programmes by 2023/24. An estimated 233 719 of beneficiaries of this work opportunities during the MTSF period will be young people. Implementation of waste management programmes: An estimated 700 new jobs will be created and 60 Small, Medium and Micro Enterprises (SMMEs) established in the waste
	 management sector by 2023/24. Implementation of biodiversity economy initiatives and other Departmental programmes: The DFFE facilitates implementation of the Biodiversity Economy initiatives and various other environment management programmes. The DFFE will continue to implement measures aimed at enhancing the environmental sector's contribution towards advancing social and economic transformation and participation of small business in the mainstream economy. Key interventions include the following: Training of 2000 entrepreneurs in the biodiversity sector. Identifying and cultivating 2500 hectares of land for indigenous species. Securing 2500 heads of game for previously disadvantaged individuals (PDI's) and communities. Over 8000 SMMEs will be used/provided with business

	 opportunities as part of implementation of the DFFE's Expanded Public Works Programme (EPWP) environmental programmes. 65% of the DFFE's budget for goods and services will be spend on affirmative procurement. Implementation of Government's Chemical and
	Waste Phakisa and the Ocean Economy Phakisa programmes.
Education and skills development	 Improved capacity for the environmental sector (Implementation of DFFE intemship and environment education programmes): The DFFE will recruit and give practical work experience to 300 young people who will participate in the internship programme during the MTSF period. A further 500 students will be placed in Work Integrated Learning Programme (WIL) by 2024. 1000 teachers in various Provinces.
	 will receive training in different aspects of environmental management through the "Fundisa for Change" programme which is a partnership programme with the Department of Basic Education focusing on environmental learning and teacher education. Environmental management education and
	awareness: Implementation of key environmental awareness interventions; inform society and change behaviours; over 20 environmental awareness campaigns will be undertaken with a focus on:
	 Air Quality Management; Blodiversity Economy; Climate Change; Good Green Deeds (waste management) An estimated 70 environmental events will be hosted over the MTSF period (Ministerial public participation events, conferences, celebration of key environment days etc.).
A capable, ethical and developmental state	Implementation of Improved governance and oversight mechanisms: The DFFE continues to implement, review and enhance good governance, oversight and accountability mechanisms for managing
	2:

A better Africa and World

Human settlements and local government

its operations and also in relation to the operations of all of the public entities of the DFFE.

Human resources management and development programmes: Development and implementation of effective human resources management and development programmes for the DFFE to ensure recruitment, retention and a sustainable and adequate supply of the talent and skills to execute the constitutional mandate of protecting and conserving the environment (350 bursaries will be issued over the MTSF period).

- Lead and influence an environmental management global agenda which advances South Africa and Africa's socioeconomic development priorities:
 - Manage and lead South Africa's participation and negotiations on climate change, sustainable development, chemicals and waste management, cceans and coastal management, biodiversity and conservation.
 - Pursue targeted and strategic global and regional engagements.

 Local Government Support Programme on Environmental Management:

 Effective implementation of planned Local Government support interventions to support municipalities in carrying out their environmental management mandate.

44 district municipalities will be assisted to incorporate environmental priorities in their integrated development plans (IDPs).

Waste management, air quality and Climate change: Sound environmental management of hazardous waste streams to protect communities from being affected by dumped or badiy managed waste. implement effective air quality management interventions and ensure reduction of atmospheric emissions from major

polluters. Building and skilling a climate resilient society.

Below is the table showing alignment of the work of the DFFE with the five goals of Government for the next 9 years (2020-2028).

Table 3: Depicting Government goals and DFFE strategic objectives towards the goals

No.	Government Goals for the next 9 years	Outcome Goals/Strategic Objectives of the DFFE
1.	Eradication of Hunger, Poverty, inequality and unemployment: That within the next 10 years we will have made progress in tackling poverty, inequality and unemployment. No person in South Africa will go hungry.	Improved socio-economic benefits to communities (employment creation, SMME development and support, skills development etc.).
2.	Economic growth: Our economy will grow at a much faster rate than our population.	Environmental economic contribution optimised.
3.	Youth employment: Two million more young people will be in employment.	Improved socio-economic benefits (Implementation of environmental programmes and providing
		employment and skill development opportunities specifically targeting young people, women and people with disabilities).
4.	Education: Our schools will have better educational outcomes and every 10 year old will be able to read for meaning.	Improved profile, support and enhanced capacity for the environmental sector.
5.	Fighting crime: Violent crime will be halved.	Improved compliance with environmental legislation.

2.3 SYSTEM OF GOVERNMENT IN SOUTH AFRICA

2.3.1 THE STRUCTURE OF GOVERNMENT

The Constitution of the Republic of South Africa, 1996 [section 40(1)] clearly states that government is constituted as national, provincial and local spheres which are distinctive, interdependent and interrelated. The "distinctive" element reflects that each sphere exists in its own right and is the final decision maker on a defined range of functions and is accountable for its decisions.

The Constitution further allocates legislative powers on either an exclusive (Schedule 5) or concurrent (Schedule 4) basis. In terms of Schedule 4 of the Constitution, the "environment" is a functional area of concurrent national and provincial legislative competence which means environmental legislation can be

made at both national and provincial level. The national and provincial executive authorities are responsible for the implementation of national legislation within the functional areas listed in Schedule 4, except where the Constitution or an Act of Parliament provides otherwise. On this basis, the national government is responsible, at a national level, for policy formulation, determining regulatory frameworks, including setting norms and standards, and overseeing the implementation of these functions. Although provinces are "distinctive", they exercise their powers and perform their functions within the regulatory framework set by the national government, which is also responsible for monitoring compliance with that framework and, if need be, intervene when constitutional or statutory obligations are not fulfilled. Through section 152 of the Constitution, municipalities also have a role in respect of environmental management, to ensure provision of services to communities in a sustainable manner as well as to promote a safe and healthy environment. Notwithstanding this, municipalities are likewise subject to both the national and provincial regulatory and supervisory powers. It is this relationship of regulation and supervision that defines how the three spheres are "interrelated" and how provinces and municipalities exercise their distinctive powers within national frameworks.

2.3.2 SOUTH AFRICAN INTERGOVERNMENTAL SYSTEM

The Constitution of the Republic of South Africa, 1996 explicitly provides for cooperative governance between the different line functions and spheres of government. Furthermore, the enactment of a law such as the intergovernmental Relations Framework Act, 2005 (Act No. 13 of 2005) (IGRFA) and the inclusion of Chapters 3 and 8 of NEMA clearly indicates that cooperative governance in South Africa is statutorily driven. Chapter 3 of NEMA stipulates procedures for cooperative governance and chapter 8 of NEMA brings a new element to cooperative governance by making provision for conclusion of environmental management agreements with any person or community for the purpose of promoting compliance with the principles laid down in NEMA.

The object of intergovernmental relations is to manage relationships and potential tension between the respective spheres of government emanating from crosscutting functions and to get a coherent government that delivers services to the nation through these spheres of government. In other words, intergovernmental relations are not an end in themselves, but a means for marshalling the distinctive effort, capacity, leadership and resources of each sphere and directing these as effectively as possible towards the developmental and service delivery objectives of government as a whole.

The Constitution spells out, among others, the following principles that underpin the South African system of co-operative government and intergovernmental relations across all spheres of government:

- Loyalty to the Republic as a whole: This means that all spheres of government should be committed to preserving the indivisibility of the country, securing the well-being of the people and, to that end, must provide effective, transparent, accountable and coherent government for the Republic as a whole. This is the object of co-operative government.
- Safeguarding of the distinctiveness of each sphere: This entails respect of powers and functions of each sphere and understanding that each sphere must remain within its constitutional powers and when exercising those powers, a sphere of government must not do so in a manner that encroaches on the geographical, functional or institutional integrity of another sphere.
- Realisation of co-operative government: This means that all spheres of government must cooperate with one another in mutual trust and good faith by
 - a) fostering friendly relations;
 - b) assisting and supporting one another;
 - c) informing one another of, and consulting one another on matters of common interest;
 - d) co-ordinating their actions and legislation with one another;
 - e) adhering to agreed procedures; and
 - f) avoiding legal proceedings against one another.

2.3.3 MANAGEMENT OF INTERGOVERNMENTAL RELATIONS IN THE ENVIRONMENT SECTOR

Intergovernmental systems depend on well-coordinated policy, planning, budgeting, implementation and reporting. This is necessary both within spheres and between spheres as well as across the sectors. Over the past years, this cooperation in the environmental sector has been driven statutorily primarily through procedures for cooperative governance provided for in NEMA Chapter 3, environmental management tools that ensure IEM stipulated in Chapter 5 of NEMA and environmental management co-operation agreements provided for in Chapter 8 of NEMA. As a result, to address the challenges of co-operative government, the three spheres of government have over the past years –

(a) Developed intergovernmental forums at national and provincial level dealing with issues of alignment, integration and coherence;

- (b) Developed systems and processes in terms of which national, provincial and local governments pursue their common objectives; and
- (c) Engaged in joint work and common projects to give effect to common objectives.

For the purpose of this document, the focus is on the EIPs and EMPs as a mechanism for cooperative governance required in terms of Chapter 3 of NEMA. The EIP describes policies, plans and programmes of a national or provincial department that performs functions that may impact on the environment and how such departments' plans will comply with the NEMA principles and national environmental norms and standards. The EMP on the other hand, describes functions of a national department involving the management of the environment and policies and laws, as well as efforts taken by the DFFE to ensure compliance by other departments, with such environmental policies and laws.

The purpose of EIPs and EMPs as provided in section 12 of NEMA is to: -

- (a) co-ordinate and harmonise the environmental policies, plans, programmes and decisions of the various national departments that exercise functions that may affect the environment or are entrusted with powers and duties aimed at the achievement, promotion, and protection of a sustainable environment, and of provincial and local spheres of government, in order to:
 - (i) minimise the duplication of procedures and functions; and
 - promote consistency in the exercise of functions that may affect the environment;
- (b) give effect to the principle of co-operative government in Chapter 3 of the Constitution;
- (c) secure the protection of the environment across the country as a whole;
- (d) prevent unreasonable actions by provinces in respect of the environment that are prejudicial to the economic or health interests of other provinces or the country as a whole; and
- (e) enable the Minister to monitor the achievement, promotion, and protection of a sustainable environment.

2.3.3.1 CHALLENGES OF COORDINATING PROCEDURES FOR CO-OPERATIVE GOVERNMENT

EIPs and EMPs tools by themselves do not and cannot constitute co-operative government; it is the systems and processes they produce and how they are implemented in the spheres and across the spheres as well as sectors of government that make co-operative government work. Currently, non-compliance with the

requirements for the preparation and implementation of EIPs and EMPs are among the notable challenges to be addressed for the system to work properly. Some of the challenges noted during the First, Second and Third editions of EIPs and EMPs were the following:

(a) Clarity in operational concepts

For consistent practices and sound decision-making processes all players in the intergovernmental relations system must work from the same ground rules; there must be clarity on the content of EIPs and EMPs and core concepts such as coordination, integration, consultation and alignment. Currently, these concepts are used interchangeably and loosely or are poorly understood.

(b) Integrated service delivery

Following on integrated strategic planning comes integrated service delivery, a seamless web of services that cuts across jurisdictional boundaries. Conversely, uncoordinated strategic planning and unilateral delivery actions by departments contribute to fragmented service delivery. Fragmented and duplicated planning may result in mismatching between programme design and community needs and opportunities.

(c) Integrated and coordinated involvement of local government

Good governance requires that the national government and the provinces execute their regulatory function over municipalities in an integrated and coordinated manner. Several national departments exercise regulatory responsibilities that impact on municipalities and there is a requirement that each provincial government must ensure that municipalities comply with and adhere to relevant EIPs and EMPs as well as to NEMA principles. If each of the national and provincial departments works with an own understanding of the role and place of local government and its own regulatory powers, the risk is that there are as many concepts of local government. In particular, the disjunction between financial budgeting and sectoral planning must be bridged. What is required is a "whole of government" approach to local government.

(d) Effective processes and procedure for settlement of intergovernmental disputes

Over the past years it became clear that provincial departments are more willing to comply with procedures for cooperative government provided in Chapter 3 of NEMA than national departments. Enforcement of compliance with Chapter 3 of NEMA on national departments is likely to cause inter-departmental conflict.

The Constitution obliges spheres of government and organs of state within spheres to avoid litigating against one another. This duty is mandatory as section 41(3) of the Constitution requires that every organ of state "must make every reasonable effort to settle the dispute by means of mechanisms and procedures provided for that purpose, and must exhaust all other remedies before it approaches a court to resolve the dispute". The courts may enforce this duty by referring a dispute back to the parties if the requirements of section 41(3) of the Constitution have not been met.

PETTERSON PETERS OF PERFORMENT PERS

PART B

Introduction

This EIP:

- Describes policies, plans and programmes of the DFFE that may significantly affect the environment;
- Describes the manner in which the DFFE will ensure that these policies, plans and programmes will
 comply with the principles set out in section 2 of NEMA as well as any national norms and standards
 as envisaged under section 146(2)(b)(i) of the Constitution and set out by the Minister, or by any
 other Minister, which have as their objective the achievement, promotion, and protection of the
 environment;
- also provides a description of the manner in which the DFFE will ensure that its functions are
 exercised so as to ensure compliance with relevant legislative provisions, including the principles set
 out in section 2 of NEMA, and any national norms and standards envisaged under section
 146(2)(b)(i) of the Constitution and set out by the Minister, or by any other Minister, which have as
 their objective the achievement, promotion, and protection of the environment;
- Provides recommendations for the promotion of the objectives and plans for the implementation of the procedures and regulations referred to in Chapter 5 of NEMA which will not be dealt with in this part, but dealt with in Part C: Environmental Management Plan.

high impact economic, environmental and social benefits. The purpose of the National Framework, as stated in paragraph 1.1.1 is to achieve the objectives of the NEM: AQA, and as such the National Framework provides a medium to long term plan of the practical implementation of the NEM. AQA. The framework must provide mechanisms, systems and procedures to promote holistic and integrated air quality management through pollution prevention, minimization at source, and through impact management with respect to the receiving environment from local scale to international issues.	These plans, amongst others, seek to implement the Republic's obligations in respect of international agreements [Section 16(1)(Ai)) of NEM: AOA].	The NWMS is a legislative requirement of the NEM: WA. The overall purpose of the NWMS is to give effect to the objects of the NEM: WA, which are to protect health, well- being and the environment through sound waste management and application of the waste management hierarchy. The strategy provides a plan to give practical effect to the NEM. WA, and as such it seeks to

ensure that responsibility for waste management is properly apportioned.	This Ocean Policy seeks to balance sustainable development and protection of the ocean environment for societal benefit. The policy recognizes that a robust and sustainable society and economy depends on services that marine ecosystems provide. The sustainable use of ocean resources requires an understanding of the marine development opportunities, the protection of biodiversity, mainearity and the avoidance of significant long term harmful impacts on the ocean environment. The policy also takes into account the National Planning Commission's request for an appraisal of the maritime sector in fight of its geopolitical positioning, a consideration of the contribution our ocean could make to employment and regional trade and the necessity for a holistic response to climate cliange adaptation as required by the South African National Climate Change Response White Paper. PART C

H. ENTREPHARMENTAL MEMORY STREET PLANE

Introduction

DFFE is a listed Schedule 2 department and therefore must prepare an EMP. This section (Part C) thus deals with DFFE EMP and addresses the following:

- A description of the functions exercised by the DFFE in respect of the environment;
- A description of environmental norms and standards, including norms and standards contemplated in section 146(2)(i) of the constitution set or applied by DFFE;
- Description of the policies, plans and programmes of DFFE that are designed to ensure compliance with its policies by other organs of state and persons;
- Description of priorities regarding compliance with DFFE policies by other organs of state and persons;
- Description of the extent of compliance with DFFE policies by other organs of state;
- Arrangements for cooperation with other national departments and spheres of government; and
- Proposals for the promotion of the objectives and plans for the implementation of the procedures and Regulations referred to in Chapter 5 of NEMA.

4.1 DESCRIPTION OF THE FUNCTIONS EXERCISED BY THE DFFE IN RESPECT OF THE ENVIRONMENT

The table below indicates the departmental programmes that are carried out in order to manage the environment.

Table 7: Department's functions

No	Programme	Function
1	Biodiversity and Conservation	Ensure the regulation and management of all blodiversity, heritage and conservation matters in a manner that facilitates sustainable economic growth and development.
2	Climate change, Air Quality and Sustainable Development	Lead, promote, facilitate, inform, monitor and review the mainstreaming of environmental sustainability, low carbon and climate resilience and air quality in South Africa's transition to sustainable development.
3	Chemicals and Waste Management	Manage and ensure that chemicals and waste management policies and legislation are implemented and enforced in compliance with chemicals and waste management authorisations, directives and agreements.
4	Regulatory Compliance and Sector Monitoring	Promote the development of an enabling legal regime and licensing authorisation system that will promote enforcement and compliance and ensure coordination of sector performance.
5	Environmental Programmes	Implement the expanded public works programme and green economy projects in the environmental sector.
6	Oceans and Coasts	Promote, manage and provide strategic leadership on oceans and coastal conservation.
7	Administration	Provide strategic leadership, management and support services to the DFFE
8	Forestry	Develop and facilitate the implementation of policies and targeted programme to ensure management of forests, sustainable use and

87

protection of land and water as well as managing agricultural risks and disaster

9 Fisheries

Ensure the sustainability utilisation and orderly access to the marine living resources through improved management and regulation

4.2 DESCRIPTION OF ENVIRONMENTAL NORMS AND STANDARDS, INCLUDING NORMS AND STANDARDS CONTEMPLATED IN SECTION 146(2)(I) OF THE CONSTITUTION SET OR APPLIED BY DFFE

This section describes environmental norms and standards, set or applied nationally by DFFE. For ease of reference, these norms and standards are arranged according to the following categories: biodiversity and conservation; climate change, air quality and sustainable development; chemicals and waste management; regulatory compliance and sector monitoring. As was highlighted in the EIP (Part B), there are no oceans and coast norms and standards as yet.

Table 8: Environmental norms and standards

NORMS AND STANDARDS	DESCRIPTION OF NORMS AND STANDARDS
GIODIVERSITY AND CONSERVAT	ION
NEM: BA Norms and Standards for Biodiversity Management Plans for Ecosystems, 2014	The purpose of the norms and standards for biodiversity management plans for ecosystems (BMP-Es) is to guide the development of BMP-Es, providing a consistent appreach across the country, while being sufficiently flexible to accommodate the variability of ecosystems and their management requirements.
NEM: BA Norms and Standards for Biodiversity Management Plans for Species, 2009	The purpose of these norms and standards is to provide a national approach and minimum standards for the development of biodiversity management plans for species.
NEM: BA National Norms and Standards for the Management of	The purpose of these norms and standards is to ensure that elephants are managed in a way that ensures the long term survival of elephants within the ecosystem in which they occur or may occur in future; does not disrupt

88

Elephants in South Africa, 2008	the ecological integrity of the ecosystems in which elephants occur; enables the achievement of specific management objectives of protected areas registered game farms, private or communal land; ensure the sustainable use of hair, skin, meat and ivory products; is ethical and humane; and recognises their sentient nature, highly organised social structure and ability to communicate
NEM: BA Norms and Standards for the Marking of Rhinoceros and Rhinoceros Horn, and for the Hunting of Rhinoceros for Trophy Hunting Purposes, 2018	These standards provide for the marking of live rhinoceros and any rhinoceros horn; management of hunting rhinoceros; collection of samples for DNA profiling. The provisions of these standards are read in conjunction with the provisions of the Threatened or Protected Species Regulations, 2007, published in Government Notice No. R. 152 in Gazette No. 29657 of 23 February 2007
NEM: PAA Norms and Standards for the Management of Protected areas In South Africa, 2016	 The purpose of these norms and standards is: to ensure the South Africa's protected areas fulfil the purpose for which they were declared as set out in section 17 of the Act; to ensure that human induced disturbance within or originating outside of protected areas is avoided, and where such cannot be achieved is minimised and the impacts remedied; to provide a goal for protected areas management authorities to strive for in managing their protected areas; to ensure protected areas are managed efficiently and effectively.
Norms and Standards for the Inclusion of Private Nature Reserves in the Register of Protected Areas of South Africa, 2017	 The purpose of these norms and standards is to- verify the existence of private nature reserves in practices, not only in name; provide for the recognition of the private nature reserves as bona fide protected areas in terms of the Act; secure the continued integrity of private nature reserves as natural areas supporting South Africa's biological diversity and its landscapes through their management; and ensure that only verified private nature reserves are included into the National Protected Areas Register and into the Protected Areas Database.
CLIMATE CHANGE AND AIR QUAL	ITY
NEM: AQA National Amblent Air Quality standards, 2009	These standards define the quality of air that is not harmful to human health and the environment. They are used as yardstick to measure the efficiency
NEM: AQA National Ambient Air	of air quality interventions.

No.	45014	93
-----	-------	----

with Aerodynamic Diameter less than 2.5 Micron Metree (PM2.5), 2012	
	e.
Declaration of a Small Boller as a Controlled Emitter and Establishment of Emission Standards, 1 November 2013	These standards provide for the control of emission of combustion pollutants from the boilers, by establishment of emission standards.
List of Activities which result in Atmospheric Emission which have or may have a significant Detrimental Effect on the Environment, including Health, Social Conditions, or Cultural Heritage, 22 November 2013	Provides a list of significant pollution sources in the country (that need to be licensed through atmospheric emission licenses). Furthermore, this notice establishes emission standards for pollutants that have to be controlled to meet ambient air quality standards.
Declaration of a Small-Scale Char and Small-Scale Charcoal Plants as Controlled Emitter and Establishment of Emission Standards, 2015	These standards establish acceptable emission levels from the small-scale char and small-scale charcoal plants.
Declaration of Temporary Asphalt Plants as a Controlled Emitter and Establishment of Emission Standards, 28 March 2014	These standards establish acceptable emission levels from the temporary asphalt plants.
CREMICALS AND WASTE MANAGE	SMENT
NEM: WA National Standards for the Scrapping or Recovery of Motor Vehicles, 2013	The standards aim at controlling the scrapping or recovery of motor vehicles at a facility that falls within the threshold as described in the standards in order to prevent or minimize potential negative impacts on the bio-physical and socio-economic environment.
NEM: WA National Standards for the Extraction, Flaring or Recovery of Landfill Gas, 2013	The standards aim at controlling the extraction, flaring or recovery of landfill gas at facilities as described in the standards in order to prevent or minimize potential negative impacts on the bio-physical and socio-economic environment.
NEM: WA National Norms and Standards for the Storage of Waste, 2013	The purpose of these norms and standards is to provide a uniform national approach relating to the management of waste storage facilities; ensure best practice in the management of waste storage facilities; and provide minimum standards for the design and operation of new and existing waste storage facilities.

NEM: WA National Domestic Waste Collection Standards, 2011	It is recognized that the South Africa is a developing country and the purpose of setting standards is to ensure a service to all while complying with health and safety regulations without unnecessarily changing current creative collection processes as long as they function well and deliver a service of acceptable standard to all households. These standards are therefore applicable to all domestic waste collection services throughout the country.
NEM: WA Norms and Standards for the Remediation of Contaminated Land and Soll Quality in the Republic of South Africa, 2014	The purpose of these norms and standards is to provide a uniform national approach to determine the contamination status of an investigation areas limit uncertainties about the most appropriate criteria and method to apply in the assessment of contaminated land; and provide minimum standards for assessing necessary environmental protection measures for remediation activities.
NEM: WA National Norms and Standards for Disposal of Waste to Landfill, 2013	These Norms and Standards determine the requirements for the disposal of waste to landfill as contemplated in regulation 8(1)(b) and (c) of the Waste Classification and Management Regulations, 2013.
National Norms and Standards for the Sorting, Shredding, Grinding, Crushing, Screening or Baling of General Waste, 2017	The purpose of these Norms and Standards is to provide a uniform national approach relating to the management of waste facilities that sort, shred, grind, crush, screen, chip or bale general waste.
National Norms and Standards for the Assessment of Waste for Landfill Disposal, 2013	These Norms and Standards prescribe the requirements for the assessment of waste prior to disposal to landfill in terms of regulation 8(1)(a) of the Waste Classification and Management Regulations, 2013.
REGULATORY COMPLIANCE AND	SECTOR MONITORING
NEMA Adoption of the Gauteng Provincial Environmental Management Framework Standard and Exclusion of Associated Activities from the Requirement to Obtain an Environmental Authorisation in terms of Section 24(2)(d) and 24(10)(1) read with Section 24(10)(d) of the National Environmental Management Act, 1998, for the Implementation of the Gauteng Provincial Environmental Management Framework	 The purpose of the Standard is to provide rules which must be complied with, ensuring- compliance to the principles contained in section 2 of the NEMA and the duty of care in terms of section 28(1) of the NEMA; sustainable development within Gauteng Province; and compliance to management measures, based on which activities are excluded from the requirement to obtain an environmental authorisation.

What are the responsibilities of the affected organs of state?	Management is responsible for ensuring that the water resources are protected, used, managed and controlled in a sustainable and equitable manner. Although not specifically designed to ensure compliance with the obligations under the Stockholm Convention, certain of the strategic objectives of this Programme are relevant to the Convention. DTIC administers the International Trade Administration Act, 2002 (Act No. 71 of 2002) which makes provision for the control, through a permit system, of the import and export of goods specified by regulation. The import and export control system extends to chemicals and could include POPs phemicals.

* 1 /m * ···	more evident in people with existing respiratory health conditions. The main pollution sources are industrial and mining related emissions, domestic fuel burning, burning of waste and vehicle emissions. A persistent concern is the level of pollution from domestic fuel burning and the associated health effects. Low income households and Informal settlements are dependent on domestic fuels, such as coal, parafifin and wood used for cooking and heating.	Exposure to unsafe amblent pollutant concentrations and associated health effects: Poor air quality is harming people's health in some areas (i.e. respiratory diseases).	

Name of affected organ(s) of state	
Description of messures to be Infroduced by DFFE to ensure compliance by organs of the state	industrial Waste, Municipal Weaste and Product design & Waste Minimization) Extended Responsibility (EPR) in terms of section 18 of NEMVA for 3 prioritized waste streams implemented to achieve: • Notice on Extended Producer Responsibilities measures and programme gazetted. • Paper & packaging waste diversion of 64% (2 519 tonnes of 3 877 tonnes) of waste tonnes of 3 877 tonnes) of waste e E-waste diversion of 21%
Key departmential response to be introduced by DFFE to ensure compliance	recycling (increased percentage of households with basic waste collection). Providing support to municipalities in tilcensing of unlicensed waste landfill sites or closing of unlicensed sites in other areas. Development of policy and legislative mechanisms and implementation of these instruments need to be enhanced. Extended Producer Responsibility (EPR): Implementation of plans and measures for prioritized waste streams (Paper & packaging, E-Waster Lighting and Waste tyres, diversion of 30% (51 078 of 170 266) of waste.
Priority/ Problem Statement	This is done to promote a recycling economy ethos through various recycling and waste beneficiation initiatives. These initiatives need to be expanded and grown on a larger commercial scale to offer more value to beneficiaries and enterprise support programmes to the informal sector. Even though waste collection services have improved significantly in recent years, there are still areas in the country where access to these services need to be improved. Data collection, reporting on waste volumes and management of increasing waste volumes has proved problematic. There is also an urgent need to address the licensing status of landfill sites and where licenses are in place, compliance to licenses conditions must be enforced.

Name of affected organ(s) of state	Provinces, municipalities and national departments
Description of measures to be introduced by DFHE to ensure compliance by organs of the state - Lighting waste diversion of 10% (27 181 tonnes of 271 810) of waste	National Forests Act, 1998 (NFA) Amendment Bill approved Regulations developed. National REDD+ Strategy approved
to ensure	Sustainable Land use management: Ensure greater alignment of sustainability criteria in all levels of integrated and spatial planning as well as in project formulation. Restoration and rel'abilitation of degraded eccosystems: The hectares of land rehabilitated will be increased each year to contribute to eccosystem resilience.
Priority/ Problem Statement Key departmental resp introduced by DFFE compliance	The DFFE and other key sector partners have over the years implemented successful programmes (Working for Land & Working for Forests) for the restoration and rehabilitation of degradation and soil erosion still remain a serious challenge, undermining the productive potential of the land. Degradation continues to threaten the local resource base upon which rural communal livelihoods depend. Over 70% of South African land surface has been intensely affected by a variety of soil erosion. Over 0.7 million ha of land is degraded and left bare by soil erosion (sheet and gully erosion). It is estimated that almost 9,000 plant species have been introduced to South Africa so far. Of these, about 161 species are deemed invasive, covering ten percent of the country

Name of affected organ(s) of state	Provinces, municipalities and national departments	3
Description of measures to be Introduced by DFFE to ensure compliance by organs of the state	15.7% (19 175 164 / 121,909,000 ha) in total under conservation for 2023/2024. 0.5% of and under conservation added Management Policy developed NBF approved NBF approved	
Key departmental response to be Introduced by DFFE to ensure compliance	Expansion of the conservation estate: Land protection and conservation by gradually increasing the percentage of land mass under conservation in each year from a current baseline of 12.96 % to 15.7% (19 175 164 / 121,909,000.00 ha) by the year 2024. To preserve biodiversity and protected ecosystem and species. The number of species under formal protection should increase and the proportion of species threatened with extinction should decline. Equitable sharing of benefits: Implementation of policies and interventions aimed at promoting equitable sharing of benefits derived from biodiversity. Biodiversity Economy . Increase the contribution of the biodiversity sector to economic growth and development.	
Priority/ Problem Statement	The country has over the years implemented a strategy on expanding its conservation estate towards levels which will ensure adequate protection of biodiversity. A land area equating to a minimum of 0.5% of South Africa's total land area is added to the protected area network annually. However, the current protected area network is still inadequate for sustaining biodiversity and ecological processes. This is largely due to the fact that only 22% of terrestrial ecosystem types is well protected and 35% completely unprotected. Due to the multifaceted value in South Africa's biodiversity, many plants and animals are subjected to exploitation. A total of 192 plants species are known to be threatened by direct use or are harvested at levels that are not sustainable. The natural resources (faurna and flora) are being exploited in an unsustainable manner, threatening the functioning of ecosystems that may undernine social and economic development. It is estimated that at least 10 million hectares of land in South Africa has been invaded by invasive alien plant species with an estimated water use of 3, 303million m3 per annum.	

Name of affected organ(s) of state	Provinces, municipalities and national departments	Provinces, municipalities and national departments
Description of measures to be introduced by DFFE to ensure compliance by organs of the state	2500 hectares of land for indigenous species cultivated	Final research report on possible additional 5% of oceans and coastal area protection compiled
Key departmental response to be introduced by DFFE to ensure compliance	The formal protection, restoration and rehabilitation of wetlands: Need to be strengthened through intprovements in land use planning, land and development management policies as well as operational and regulatory means at various scales. More than 165 wetlands will be rehabilitated per annum and management plans developed for all Ramsar sites.	Protected ecosystems and species: Develop and implement effective strategies for the management of the oceans' environment. Increasing total area of the Exclusive Economic Zone which is declared as new offshore protected area and developing marine
* 2 (h - i	benefits. The DFFE implements the "Working of for Wetlands Programme" in partnership with the DWS and the DALRRD which is aimed at ensuring the rehabilitation and protection of wetlands. In South Africa the "outright loss of wetlands is estimated to be more than 50% of the original wetland area. 65% of wetland types have been identified as threatened, 48% are critically endangered, 12% are endangered and five percent are vulnerable. Floodplain wetlands have the highest proportion of critically endangered ecosystems.	An estimated 50% of our wetlands have been destroyed or converted to other land uses (serve as filtration systems and regulators of water flow). South Africa's coastline and ocean are largely in a good environmental state. There are however, a number of concerns in these sub-sectors of the environment 'inich require intervention. These challenges include

	higher pollution levels around coastal metropolitan areas. The impact of pollution and reduced fresh water flow through estuaries (together with extractive pressure), leading to deteriorating environmental health and the risk of oil spillages in the coastline, coastal waters and islands. The exploitation of marine resources continues to expand in ways that are not always predictable.	Some sand-mining or sand-winning, takes place along South Africa's coastline, with much of the existing activity being undertaken illegally, making it difficult to estimate its value.	The severity of wastewater pollution in the marine environment has continued to grow.	The overexploitation of natural resources from the ocean and the coastal zone.	Unplanned and uncontrolled coastal development continue to pose severe threats.	

This section of the plan provides a descripl with policy. Furthermore, an indication of th in Schedules 1 and 2 of NEMA is provided. Table 11: Extent of compliance with DFFE polici	with policy. Policy	Description of expected state of compliance	Organ of State expected to comply	What are the compliance challenges?
White Paper on Environmental Management Policy for South Africa, 1998	Use of environmental policy by all spheres of government. The policy intends to achieve a bold paradigm shift in government policy that introduced an integrated and coordinated management regime that: addresses the total environment and all human activities impacting on it, and will ensure that all aspects of environmental governance including norms, standards, legislation, administration and enforcement are dealt with uniformly across departments and in all spheres of government. 	All spheres of government and their entities are in	Non-aligned and uncoordinated government policies.
National Policy for the Provision of Basic Refuse Removal Services to Indigent Households, 2011	The purpose of the National Policy for the Provision of Basic Refuse Removal Servixes to Indigent Households is to ensure that pcor (indigent) households have access to at least basic (essential) refuse removal services from the concerned	n Provinces and municipalities	South African municipalities face a number of challenges with respect to delivering an effective and sustainable waste service to all households, including insufficient budget, skilled capacity, lack of appropriate equipment

	White Paper on the National Oc Environmental Management me of the Ocean, 2014 ag	White Paper on National Climate Change Response, vis 2011 • • •
municipality. Meeting this purpose requires aligning the National Policy for the Provision of Basic Refuse Removal Services to Indigent Households with already existing key relevant legislation, indigent policies for different municipalities, financial management systems, while being mindful of the need to ensure that there is uniformity when deating with various cases of the indigent households.	Oceans policies seek to improve sectoral management of the ocean sector and planning and management across sectors for accumulated and aggregated impacts. Thus the expected compliance is alignment of policies and interventions.	The expected state of compliance with this White Paper will be the achievement of Government's vision for an effective climate change response and the long-term, just transition to a climate-resilient and lower-carbon economy and society. South Africa's response to climate change has two objectives: Effectively manage inevitable climate change impacts through interventions that build and sustain South Africa's social, economic and environmental resilience and emergency response capacity. Make a fair contribution to the global effort to stabilise greenhouse gas (GHC) concentrations in the atmosphere at a level that avoids dangerous anthropogenic interference with the climate system within a timeframe that enables economic, social and environmental development to proceed in a sustainable manner.
	All spheres of Government	Ail spheres of Government
and poor access to service areas. These challenges are exacerbated by growing urban populations who need access to municipal services and migration from rural to urban areas. South Africa's rapidly growing economy is also expected to see increasing volumes of waste being generated.	Lack of alignment of policies and interventions	Challenges are around business buy-in on mitigation aspects.

	Urgaris of state are mererore expected to align their interventions.		
White Paper for Sustainable Coastal Development in South Africa, 2000	Historically activities that are undertaken in the ocean and coastal environments have been regulated by individual departments and other organs of state. However, this is done with regard to their respective economic mandales and does not always adequately consider the mandales and does not always adequately consider the mandales and cost of conservation and protection or a holistic approach to the management of pressures. A coordinated approach will facilitate efficiencie; and cost saving in sectors cooperating to support each other's efforts to expand existing sectors and explore new sectors. Amongst, others, South Africa's ocean policy therefore takes cognisance of the responsibilities in the marine area under its national jurisdiction to ensure co-ordination and harmonisation of policies, legislarion and actions relating to the environment at an intergovernmental level.	DFFE and coastal provinces	Continuing limited coordination and harmonisation of planning, implementation and reporting by coastal provinces.
National Strategy for Sustainable Development, 2011. National Development Plan Chapter 5	"South Africa aspires to be a sustainable, economically prosperous and self-reliant nation state that safeguards its democntoy by meeting the fundamental human needs of its people, by managing its limited ecological nesources responsibly for current and future generations, and by advancing efficient and effective integrated planning and governance through national, regional and global collaboration". In order to achieve this, there are a set of interventions, indicators that should be incorporated in plans, and institutional arrangements where relevant organs of state (including non-state parties) participate. There are also feedback and reporting mechanisms on progress with the indicators.	All spheres of government and public entities	Lack of integration of the national strategy into organs of state's plans. Thus limiting reporting and participation in the national structures as well as interventions undertaken.

	improve the overall contribution from the fishing industry to the long-term vision of a democratic South Africa (as stated in the Macro-Economic Strategy presented by the Department of Finance) which is • a competitive, fast-growing economy which creates sufficient jobs for all work-seekers a redistribution of income and opportunities in favour of the poor • a society in which sound health, education and other services are available to al! • an environment in which homes are secure and places of work are productive.	All spreres of government and public entities	The exploitation of the living marine resources of South Africa.
White Paper on Sustainable Forest Development in South Africa: the Policy of Government of National Unity, 1997	the Government of South Africa will endeavour to implement through its marine fisheries management institutions in order to achieve this overall policy objective. The overall goal of Government is to promote a thriving forest sector, utilised to the lasting and sustained benefit of the total community, and developed and managed to protect and to improve the environment.	All spheres of government and public entities, communities	Challenges of sustainable relationships between people and forest resources.
	The broad aim of the White Paper policy is to weld together the three strains of conservation forestry, commercial forestry and community forestry.

South African National Road Agency (SANRAL) - DFFE Cooperative Committee	Coordination of joint projects with this state owned company.	Ongoing	SANRAL	Party to agreement
Presidential Infrastructure Coordinating Commission (PICC)	Coordinate economic development contribution of different departments. Primary aim is to expedite infrastructure development of the country's 18 Strategic Integrated Projects (SIPs.)	Ongoing	ртіс	Participant
Specific sector forums lead by municipalities (e.g. waste, climate change, air auality, coastal, wetlands)	These sector forums deliberate on specifics that affect relevant municipalities and provide advice on how to address them.	Ongoing	Representatives from all spheres of government (including municipalities)	Participant
DFFE-DSI Bilateral	MOU in place for promotion of evidence and science-policy interface in environmental, science and innovation areas of common interest between the two Departments.	5 years	DSI	DG-DG Chairing

 4.1 PROPORAIAS FOR THE PROMOTION OF THE OBJECTIVES AND PLANS FOR THE IMPLEMENTATION OF THE PROMOTION OF THE PROMOTIO
--

No	 Tools proposed and plans 	Objective
		To document and monitor the economic contribution of ELAS to different sectors (e.g. energy). Ensure that the effects of the activities on the environment receive adequate consideration before action are taken in connection with them.
~	Co-ordination and integration of ELAs with waste management licenses and atmospheric emissions licenses	To integrate environmental authorisations, licenses and permits.
ė	Development of the NEMA IEM training strategy	To develop IEM skills.
4	South African Carbon Sinks Atlas	To understand the distribution of the carbon stocks and fluxes across South Africa, to identify the land based mitigation opportunities and to conduct policy review to understand the impact of policy on sustainable land management.
in .	South African Atmospheric Emission Licensing and Inventory Portal (SAAELIP)	To manage AELs as well as the estimation and reporting of atmospheric emission inventories terms of the NEM: AQA. SAAELP provides a seamless integration between the management of AELs and the reporting of atmospheric emissions into the National Atmospheric Emission Inventory System.
ø	Geographical Information Systems (GIS)	
	South African Waste Information Centre	Provides the public, business, industry and government with access to information on the management of waste in South Africa.
ø	Environmental Indicators Database	To help support environmental monitoring and reporting.
	National Environmental Authorisation System (NEAS)	The main objective of the portal is to promote service delivery quality through the improvement of communication between the public administrators and the public.
10.	SAAQIS	Provides a common platform for managing air quality information in South Africa
