DEFINITIONS

Act means the Engineering Profession Act, 46 of 2000 “as revised”.

Code means this code of practice document.

Code of Conduct means the Code of Conduct for Registered Persons: Engineering Profession Act, 46 of 2000.

Competency means a combination of knowledge, training, experience and applicable qualifications that enables an individual to perform a task or an activity successfully.

Council means the Engineering Council of South Africa established by Section 2 of the Act.

Discipline means the disciplines of engineering as recognised by the Engineering Council of South Africa.

Engineering Work means the process of applying engineering and scientific principles, concepts, contextual and engineering knowledge to the research, planning, design, implementation, maintenance, and management of work in the natural and built environments. It includes advisory services, assessment of engineering designs and determination of the risks posed by the design on workers, the public, and environment.

Identification of Engineering Work means the Identification of Engineering Work as gazetted.

Overarching Code of Practice means the Overarching Code of Practice for the Performance of Engineering Work as gazetted.

Practice means any engineering professional service, advisory service or creative work requiring engineering education, training and experience and the application of special knowledge of the mathematical, physical and engineering sciences, or creative work such as consultation, research, investigation, evaluation, planning, surveying, risk assessment and design, in connection with any public or private utility, structure, building, machine, equipment, process, work or project.

CONTROLLED DISCLOSURE

When downloaded for the ECSA Document Management System, this document is uncontrolled and the responsibility rests with the user to ensure that it is in line with the authorized version on the ECSA Document Management System.

QM-TEM-001 Rev 1 – ECSA Policy/Procedure

Compiled by: Manager RPS	Approved by: Executive RPS	Next Review Date: N/A	Page 5 of 22
Date: 04/07/2022	Date: 03/10/2022		

Profession means Engineering Profession.

Registration Category means a professional registration category as specified under Section 18(1)(a)–(c) of the Act, including Professional Engineer, Professional Engineering Technologist, Professional Certificated Engineer, Professional Engineering Technician, Candidate and Specified Category Practitioner.

Registered Person means a person registered under a category referred to in Section 18(1) of the Act.

Specified Category means those registration categories classified as such by ECSA, for example those related to fire protection systems, lifting machinery and medical equipment.

Specified Category Practitioner means a person registered in terms of section 18(1)(c) of the Engineering Profession Act, carrying out specifically defined engineering activities.

Unregistered Person means any person undertaking Engineering Work who is not registered in terms of the Act. This does not include persons registered by other statutory bodies who are part of teams undertaking Engineering Work.

CONTROLLED DISCLOSURE

1. INTRODUCTION

In terms of Section 27(1) of the Act, the Council must draw up a code of conduct for Registered Persons and may draw up a code of practice in consultation with the Council for the Built Environment, Voluntary Associations and registered persons. The Council is also responsible for administering the code of conduct and the code of practice and ensuring that these codes are available to all members of the public at all reasonable times. An “Overarching Code of Practice for the Performance of Engineering Work” was therefore developed and published in the Government Gazette, dated 26 March 2021, which further in this document is referred to as the “Overarching Code of Practice”, for brevity. The Overarching Code of Practice applies to all engineering disciplines.

Section 18(1) of the Act provides four categories for registration of professionals and candidates, namely Engineers, Technologists, Technicians and Certificated Engineers. Section 18(2) prohibits persons so registered from practising in a category other than that in which they are registered.

In line with these requirements, the Metallurgical Engineering Code of Practice aims to supplement the Overarching Code of Practice. The Code also regulates the practice by classifying Metallurgical Engineering Work in terms of its complexity and stipulates the category of registration and the level of competence required for the execution of such work.

2. POLICY STATEMENT

This Code is a statement of good practice for the performance of Metallurgical Engineering Work by Registered Persons. It is applicable to the entire Metallurgical Engineering profession. Section 27(3) of the Act requires Registered Persons to adhere to the requirements of this Code when they perform metallurgical work.

3. PURPOSE AND SCOPE OF DOCUMENT

The Code’s purpose is to ensure that any person undertaking Metallurgical Engineering Work meets the prescribed requirements when practising and executing Metallurgical Engineering

CONTROLLED DISCLOSURE

When downloaded for the ECSA Document Management System, this document is uncontrolled and the responsibility rests with the user to ensure that it is in line with the authorized version on the ECSA Document Management System.

QM-TEM-001 Rev 1 – ECSA Policy/Procedure

Document No.: R-02-COP-MET	Revision No.: 0	Effective Date: 01/12/2022	
Subject: Code of Practice for the Performance of Metallurgical Engineering Work			
Compiled by: Manager RPS	Approved by: Executive RPS	Next Review Date: N/A	Page 8 of 22
Date: 04/07/2022	Date: 03/10/2022		

Work within the jurisdiction of the Act. This Code sets appropriate levels of competence regulating the execution of Metallurgical Engineering Work and specifying technical standards and best practices.

This Code also applies when a Metallurgical Engineering Practitioner performs Metallurgical Engineering Work in the specified categories, such as those related to fire protection systems, lifting machinery and medical equipment. Additional codes of practice, specific to the specified category, may also apply in these contexts.

4. APPLICABLE LEGISLATIVE FRAMEWORK

Section 27 of the Act empowers the Council to draw up codes of practice in addition to codes of conduct and requires all registered persons to comply with such codes.

This Code should be read in conjunction with the Act and related documents, in particular the Code of Conduct for Registered Persons, the Overarching Code of Practice and the gazetted Identification of Engineering Work Regulations.

5. METALLURGICAL ENGINEERING WORK

The Metallurgical Engineering discipline operates primarily in the mining, minerals and metals sectors and utilises the knowledge of mathematics, chemistry, physics, mineralogy, underlying process fundamentals and process engineering to control and improve processes that separate, concentrate and recover minerals and their valuable metals from natural ores and/or secondary resources as well as transforming them into final usable products. Three career paths are available to the Metallurgist: Minerals Processing, Extractive Metallurgy and Physical Metallurgy/ Materials Engineering (**R-05-MET-PE**).

Minerals Processing is a branch of Metallurgical Engineering through which valuable minerals are separated from gangue and/or other constituent minerals through specialised physical and physicochemical processes such as crushing and milling, flotation, jigging, scrubbing, magnetic separation, dense medium separation (DMS) and heavy medium separation (HMS), among others. The unit processes require crushing and grinding the ore to a fine size to liberate

CONTROLLED DISCLOSURE

QM-TEM-001 Rev 1 – ECSA Policy/Procedure

Document No.: R-02-COP-MET	Revision No.: 0	Effective Date: 01/12/2022	
Subject: Code of Practice for the Performance of Metallurgical Engineering Work			
Compiled by: Manager RPS	Approved by: Executive RPS	Next Review Date: N/A	Page 9 of 22
Date: 04/07/2022	Date: 03/10/2022		

and separate the individual mineral particles from the waste rock and other constituent mineral particles. Valuable minerals and metals such as gold, silver, copper, lead, zinc, molybdenum, iron, potash, phosphate and even sand for glass are often processed by unit processes such as physical separation and froth flotation (**R-05-MET-PE**).

Extractive Metallurgy involves the extraction of metals from their natural mineral deposits or intermediate compounds from ores by chemical or physical processes, including hydrometallurgical process stages, high temperatures or pyrometallurgical process stages and electro-metallurgical process stages. The aforementioned processes may produce pre- or crude metal products that can be subjected to further processing, refining and manufacturing through unit processes such as electrowinning, alloying, casting, rolling and extrusion (**R-05-MET-PE**).

Physical Metallurgy and Materials Engineering involves the processing and fabrication of metals and alloys into finished products using unit processes such as alloying, casting, forging, welding and heat treatment, among others, and controls the physical, chemical and mechanical properties. Physical Metallurgy and Materials Engineers in addition perform research, analysis, design, production, characterisation, failure analysis and application of materials, including metals and alloys, for engineering applications based on an understanding of the properties of matter and engineering requirements (**R-05-MET-PE**).

5.1 Engineering qualifications and supervision of Engineering Work

It is highly recommended that all Metallurgical Engineering Work be undertaken by registered Metallurgical Engineering Practitioners. In cases where work is to be performed by unregistered Metallurgical Engineering Practitioners, it is recommended that the following work allocation in Table 1 be considered under the direct supervision and control of registered Metallurgical Engineering Practitioners:

Table 1: Engineering Qualifications and Supervision of Engineering work

Qualification	Level of Descriptors	Supervision
a) BEng/BSc Eng	Solving complex engineering problems and performing complex engineering activities	Pr.Eng.

Compiled by: Manager RPS	Approved by: Executive RPS	Next Review Date: N/A	Page 10 of 22
Date: 04/07/2022	Date: 03/10/2022		

Qualification	Level of Descriptors	Supervision
b) BTech/ BEng Tech Eng / Advanced Diploma	Solving broadly defined engineering problems and performing broadly defined engineering activities	<ul style="list-style-type: none"> • Pr.Eng. • Pr.Tech. Eng
c) National Diploma	Solving well-defined engineering problems and performing well-defined engineering activities	<ul style="list-style-type: none"> • Pr.Eng. • Pr.Tech. Eng • Pr Techni Eng

5.2 Category of registration and level of descriptors

Metallurgical Engineering has a diverse range of sub-disciplines operating in the mining, minerals and metals sectors in which Metallurgical Engineers could be employed, as seen in **Table 2**. Due to the diverse range of sub-disciplines and specialised skills characterising the profession, it is complex to define a set of predetermined training paths for a Metallurgical Engineer. Instead of predetermined paths, a set of guiding principles in **Table 3** is proposed whereby Candidate Engineers can shape the course of their careers. The nature of work involved in Metallurgical Engineering follows the general principles in **Table 3** across all sub-disciplines. Work performed by non-registered Metallurgical Engineers should be executed under the direct supervision and control of registered Metallurgical Engineering Practitioners as discussed in **Table 1**. In summary:

- The performance of Metallurgical Engineering Work requires solving industrial engineering problems and engaging in Metallurgical Engineering activities.
- Metallurgical Engineering Work encompasses several Metallurgical Engineering sub-disciplines, each dealing with a specific body of knowledge.
- Depending on the level of complexity, Metallurgical Engineering Work is carried out by Registered Persons possessing different levels of competence as typified by the various categories of registration given in Section 18(1) of the Act.
- Due to a common grounding in the mathematical and physical sciences, there are areas of overlap among the various sub-disciplines of Metallurgical Engineering and overlaps

QM-TEM-001 Rev 1 – ECSA Policy/Procedure

Document No.: R-02-COP-MET	Revision No.: 0	Effective Date: 01/12/2022	
Subject: Code of Practice for the Performance of Metallurgical Engineering Work			
Compiled by: Manager RPS	Approved by: Executive RPS	Next Review Date: N/A	Page 12 of 22
Date: 04/07/2022	Date: 03/10/2022		

Nature of Work	Activities
Process plant, and equipment design and optimisation	<ul style="list-style-type: none"> Collecting, analysing, and reporting data from new and existing processes, plant, or equipment, in line with design codes and standards. Applying the principles of complex Metallurgical Engineering practice, including the critical study of complex work methods and the development of more effective techniques for recognising real and significant problems and how to solve them. Process design and development, involving laboratory, pilot-scale or full-scale plant work to generate engineering data for the specification and design of broadly defined new metallurgical plants or the improvement of existing plants. Prepare complex process flow sheets, material and energy balances, and engineering designs, including specifications on design, sizing and selection of equipment, service requirements, materials of construction, economics and impact on the environment. Design plants or equipment by considering the following aspects: reliability, maintainability, usability, supportability, reducibility, disposability and affordability. Optimisation and control of a complex process or equipment to improve performance. Process optimisation involves providing solutions to the problem identified; this might be through improving the system/equipment operating parameters by modifying or installing new processes, equipment or systems.
Product Manufacturing and Characterisation	<ul style="list-style-type: none"> Design new engineering materials, focusing on the relationship between composition, crystal and microstructure, processing and physical and mechanical properties. Analyse the properties and structure of engineering materials such as metals, alloys, ceramics and composites to improve performance or create new engineering materials that meet or exceed the desired mechanical, electrical, magnetic and chemical properties stipulated by specific design codes and standards. Design, develop, and test processes and protocols to evaluate and improve properties and performance of engineering materials, including assisting in the selection of materials for different products for new and existing applications. Apply physical and chemical manufacturing methods to transform engineering metals, alloys and composites into semi-fabricated

Subject: Code of Practice for the Performance of Metallurgical Engineering Work			
Compiled by: Manager RPS	Approved by: Executive RPS	Next Review Date: N/A	Page 15 of 22
Date: 04/07/2022	Date: 03/10/2022		

Nature of Work	Activities
Safety, Health, Environmental and Quality (SHEQ) Management	<ul style="list-style-type: none"> Coordinate the analysis of samples taken from metallurgical process streams to ensure safe and economic operation and advise operations personnel on process changes required to obtain desired products, processes and quality control. Continuously apply a thorough understanding of safety, health, environment and quality policies and procedures as prescribed by legislation and/or internal company policies, and proactively identify, monitor and mitigate potential risks in accordance with legislation and best practice. Ensure the OHS Act and other relevant standards are followed.
Plant decommissioning	<ul style="list-style-type: none"> Disassemble equipment – this can be a process undertaken from one pilot plant to another depending on exploration period and requirements of the mineral processing or mining plant. Evaluate and undertake design and analysis of the new site requirements for optimum performance. Ensure decommissioning strategy and safety procedures are followed by understanding the chemical and physical characteristics of the equipment or plant. Undertake and compile procedures for plant de-commissioning and consolidation for shutdown or closure. Ensure the regulatory and statutory application and authorisation process is acquired.

6. COMPETENCY REQUIREMENTS

Reference should be made to the *Overarching Code of Practice* for “General Requirements” and “Requirements for Registered Persons”; and to the gazetted *Identification of Engineering Work* for “Core Competencies Required to Perform Identified Engineering Work”.

6.1 Competence required to perform Metallurgical Engineering Work

Any person who performs any Metallurgical Engineering Work must comply with the Act and with any other requirement contemplated in the Engineering Profession Act, namely:

CONTROLLED DISCLOSURE

- to be registered with ECSA in the appropriate professional registration category applicable to the level of service performed or if not registered, perform under direct supervision and control of a Registered Person; and possess the necessary core competency in the competency areas to perform such core service as a Professional Engineer, Professional Engineering Technologist, Professional Certificated Engineer, Professional Engineering Technician, or a Specified Category Practitioner.

6.2 Competency Evaluation

In addition to their category of registration with reference to the complexity of the work, the level of experience of Metallurgical Engineering Registered Persons should meet or exceed the requirements of the risk competency model shown in **Table 4**. In the model, risk may include (where appropriate) risk to the health and safety of people and society, the natural and built environment, property, financial interests and related project timescales.

Table 4: Competency model

Level of experience	Level of supervision	Responsibility	Allowable risk
Candidate	Direct and frequent supervision	Aid and support for engineering activities	Low
Competent	General supervision	Guide and provide input for engineering activities	Medium
Registered person	Work independently	Oversee and guide engineering activities	High

6.3 Risk Categorisation

The level of experience of Registered Persons needs to be read in conjunction with the risk matrix presented in **Table 5** and **Figure 1** below.

Table 5: Level of risk associated with the competency model

CONTROLLED DISCLOSURE

7. PRACTICE REQUIREMENTS

7.1 Minimum practice requirements

All Metallurgical Engineering Work must be carried out or services rendered:

- in accordance with the requirements of the applicable acts and regulations
- in an ethical and responsible manner in accordance with the Code of Conduct
- in accordance with accepted norms and standards in the industry.

7.2 Compliance with acts and regulations

Registered Persons must always ensure compliance with the appropriate acts and associated regulations. Notable national acts that may be applicable to Metallurgical Engineering Work include the following:

- Engineering Profession Act, as amended
- Occupational Health and Safety Act and Regulations, 85 of 1993: Driven Machinery Regulations, Pressurised Equipment Regulations
- Minerals and Energy Acts, e.g., Mineral and Petroleum Act, 28 of 2002
- Mine and Safety Act, 29 of 1996 (see www.dmr.gov.za: Design of underground dam walls, plugs and barricades, Regulations on use of water for mining)
- National Environmental Management Act, 107 of 1998
- National Environmental Management Waste Act, 59 of 2008
- Project and Construction Regulations Management Professions Act, 48 of 2000
- Nuclear Energy Act, 46 of 1999
- National Water Act, 36 of 1998: Various measures relating to pollution of a water resource; Waterworks process controller
- National Water Act, 54 of 1956: Determination of persons permitted to design dams.

QM-TEM-001 Rev 1 – ECSA Policy/Procedure

Document No.: R-02-COP-MET	Revision No.: 0	Effective Date: 01/12/2022	
Subject: Code of Practice for the Performance of Metallurgical Engineering Work			
Compiled by: Manager RPS	Approved by: Executive RPS	Next Review Date: N/A	Page 19 of 22
Date: 04/07/2022	Date: 03/10/2022		

7.3 Application of codes and/or standards

All Metallurgical Engineering Work must be carried out in accordance with the best practices represented by the relevant national and international standards, industry standards, codes of practice and best practice guidelines.

Standards and codes must be applied as and when required by government regulation, customer or end-user requirements and as an accepted industry norm. It is the duty of the engineering Registered Person to ensure that all standards and codes used abide by the applicable acts and regulations (considering that more than one country's legal frameworks may be relevant).

Standards and codes may be used in place of regulations where it can be proven that the requirements of the standard or code meet and/or exceed those prescribed by regulations and/or law. Any deviations from the standards or codes requested by the customer or end-user should be communicated to the appropriate stakeholders, supported by evidence that the deviation will not negatively impact the performance and safety of the system or device.

Various national and international bodies are recognised and accepted within industry to develop and publish standards related to Metallurgical Engineering, notably:

- SANS codes for Specification for Piping Design / Material (ANSI), see www.sabs.co.za.
- SANS 10248, 1023: Waste Classification and Management Regulations (e.g., tailings and waste spillage) from South Africa Constitution Act, 108 of 1996 and Hazardous Substance Act, 5 of 1973.
- ISO 9001: 2015 – Quality Management Systems
- SAMREC (South African Code for Reporting of Exploration Results, Mineral Resources and Mineral Reserves) e.g., 10320:2004.
- SAMVAL (South African Code for Reporting of Mineral Asset Evaluations) from www.sans.co.za.

8. ADMINISTRATION

The Council is responsible for the Administration of this Code of Practice, including its publication, maintenance, and distribution.

The Council must ensure that the code of practice and all amendments thereto are available on the ECSA Website and must upon request, provide a copy thereof.

The Council must take all reasonable steps to introduce the Code of Practice to the general public.
